Cylinders wear most at the TOP

Chrome plated rings retard wear

Therefore TOP rings must be chrome plated to retard cylinder wear

Solid chrome plating on top and bottom rings gives wear protection throughout entire area of ring travel. Only 2-in-1 furnishes alternate HiPressure spring with every all ring, for badly worn engines.

No so-called "chrome" piston ring set is complete unless it offers the protection of chrome on the TOP ring as well as on the oil ring! For the top ring operates where most wear occurs . . . where heat is highest, pressure is greatest, and lubrication is poorest!

Because it provides double wear protection . . . with chrome on both the top ring and oil ring . . . Perfect Circle's 2-in-1 chrome set seals compression and controls oil for over twice as long as old style ring sets! No tedious break-in period, either! So, for thousands of extra miles of top engine performance insist upon 2-in-1! Perfect Circle Corporation, Hagerstown, Indiana; The Perfect Circle Co., Ltd., Toronto, Ontario.

Meet Our Railroad Expert

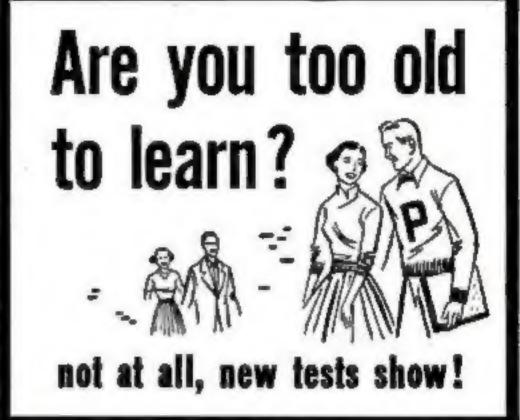

HENRY COMSTOCK, who illustrated and wrote "Catching the 8:05 Could Be a Thrill" on page 120, has been an iron-horse enthusiast ever since he listened to the gossip of his grandparents — railroad telegraphers both, A writer and editor, as well as an artist, Comstock

has written many articles on railroading and done the pictures for many of them. For nine years he was the editor of Rallroad Magazine, Since 1952 he has been an associate editor of Popular Science MONTHLY, and its foremost railroad expert.

One night recently a neighbor of Comstock's phoned to say he had heard a passing train make a funny noise, Comstock joined in investigating and found a broken rail. While the neighbor went to phone, Comstock flagged down a passenger train and a fast freight. What surprised their grateful crews was the expert way he did this too-with the standard "washout" signal, a light waved back and forth horizontally across the track.

EXPERT SAYS YOU CAN LEARN NEW TRICKS!

New tests, cited by an expert in news stories, show that: your ability to think increases with age; your powers of deduction are greater; your judgment is better.

I. C. S. KNEW IT ALL THE TIME! In the L. C. S. files are thousands of case histories of men and women of every age. Their successes, their promotions, their raises prove that men and women past school age can learn! Listen to A.L.G.* "Up until I took the course, I did what I was told, But now . . . I tell others what to do."

L.C.S. GIVES YOU EXPERT GUIDANCE FREE! Do you have the feeling you're "stuck" in your job?

Your trained I. C. S. counselor will appraise your abilities, help you plan for the future. Listen to D.F.K.* "Before enrolling, I was a foundry laborer. Today I am a draftsman, enjoying a ¼ increase in salary."

with I. C. S. at home, in your spare time. There's no interference with business or social activity. Famous I. C. S. texts make learning easy. And whatever your age, you're more capable now than you've ever been. But don't delay! Pick your field from the coupon below. Mail the coupon today! We'll send free "success" book, survey of opportunities in your field! Mail now for 2 free books.

Navy's new radio Voice"

dedicated to America's security

WOELD'S MOST POWERFUL MILITARY RADIO TRANSMITTER

A 6-YEAR NAVY-RCA PROJECT I

On Jim Creek, in the State of Washington, stands the world's most powerful military radio transmitter—its giant antenna stretches from mountain peak to mountain peak.

A 6-year project of the Navy and RCA, "Big Jim" was built and installed to provide the Navy, for the first time, with instant communications with naval units everywhere, on the seas and under the seas, on land and in the air.

Speaking at the dedication ceremonies, Gen. Sarnoff, Chairman of the Board of RCA, said:

"May I express the wish, which I know all in our Armed Services share, that this powerful instrument for transmitting intelligence may add to our national security and to the peace of the world."

The first message flashed by the "Big Jim" transmitter was from Admiral Robert B. Carney, Chief of Naval Operations, to U. S. Navy personnel around the world. He said:

"With this message we forge another link between you and your homeland. With it, we build a new security channel from America to the naval units which form its outer compacts of defense."

AT DEDICATION CEREMONIES - General Samoff operates key to transmit first message, dictated by Admiral Carney, to fleet units around the world.

Amazing New Method Uses Your Knowledge of English to Avoid Months of Memorizing

Method Proved by Thousands, Including Ben Grauer, Ex-Ambassador Griffis. Students Start Using Sentences From First Lesson, Learn Pronunciation From Expert Teacher. Try it At Home Before Paying a Cent!

NOW you can learn to speak, read and write Spanish—in far less time, and at far less cost, than you ever dreamed of—with Madrigal's Magic Key to Spanish! You can start forming sentences from the very first lesson; identify thousands of Spanish words after only a few more lessons! For here at last is a unique language method that does not rely on your memory or mechanical study. Instead this brand new approach enables you (a) to build a large Spanish vocabulary quickly and easily from English words you already know (b) to use your own commonsense creativeness in expressing ideas, phrases and sentences in Spanish (c) to hear, on amaz-

CAN YOU RECOGNIZE ANY OF THESE WORDS?

popular importante atractica radio presidente central actor capital restaurante conductor Atlántico optimisto animal destista

If you can recognize even a few of these words, the Spanish language is yours for the asking, For this unique new short-out method starts by using your knowledge of English to help you identify thousands upon thousands of Spanish words on eight! Not only that, but Madrigal's Magic Key gives you the thrill of forming complete Spanish sentences right from the very first lesson!

GET AMAZING RESULTS LIKE THESEI

STANTON GRIFFIS, former Ambassador to Spain and Argentina, says: "When I was faced with the task of learning Spanish in a few weeks Margazita Madrigal came to my rescue with her remarkable method and I found myself sporking Spanish with case and pleasure."

SEN GRAVER, noted radio and television personality: "Last time I was in Mexico City. I conducted a quarter-hour television interview entirely in Spanish. It was Miss Madrigal's method that made this possible for me."

These are only a few of the many letters of praise received from Madrigal students! You too can achieve quick mastery of the Spenish language with this brand-new simplified method.

NOT \$50.00 . . . NOT \$25.00 . . . but

Yours for FREE Home Trial!

Mail scupes new, without money. We will send you the entire Madrigad's Magic Key to Spanish, lessen-lett and records. Pay nothing to postman. If within 10 days, you don't estimate that you have learned how to convert at least 10,000 English words into Spanish, return Course without paying a cent. If, however, you are thereughly delighted, been it and send only \$1.85, plus shipping cost, an first payment, and balance of small price in four monthly payments of only \$2 such, Take this many read to mastery of Spanish new!

What is Madrigal's Magic Key to Spanish?

The complete Madrigal's Magic Key to Spanish consists of 45 easy lessons, plus a vocabulary section of nearly 3,000 Spanish words and common expressions, all bound into a single handsome volume; PLUS two 12-inch long-playing records (equivalent to fifteen ordinary records.) Each side of these records is divided into bands coordinated with the printed lessons in the book, so that you not only learn how to read, write and translate into Spanish, but you also hear exactly how you should pronounce it! If you have heard today's new long-playing records selling for up to \$5.95 each, you know the clear real-life quality you may expect from these comparable language records. They sound as though your instructor is in your own room, seated in front of you!

Never before has a Spanish language course of such completeness, authority and ease of learning been offered with both text and records at such amazingly low cost. Mail Free-Trial Coupon.

FIX TV RADIO RIGHT AWAY

even if you never fixed a lamp or doorbell before!

McGraw-Hill's Amazing New Low-Cost Course Skips Confusing "Theories"

and "Formulas." Tells How-to-do-it in PLAIN ENGLISH!

WHY hasn't somebody done this BEFORE? That's what you'll exclaim the minute you start browsing through this amazing new one-volume course in TV and radio repair.

For here at last a well-known EXPERT has found a way to tell you in PLAIN ENGLISH how to fix almost ANY radio or television set. (And he even tells you where you can go to have the extra-tough jobs done FOR you . . . at reduced professional rates.) Right from the very first chapters you can start doing simple repairs . . and before you're HALF way through the course, you can fix HALF the television and radio sets that you encounter. In just a few weeks you can start fixing your own and friends' sets . . . get a service shop job . . . even start your own money-making business at home.

Why It's So EASY to Understand

You get no complicated formulas, algebra, laboratory experiments, technical double-talk. Instead you deal only with the parts that go wrong in sets—how to recognize the trouble—and what to do about it. "Easy as A-B-C" directions and 700 clear photos, diagrams, and drawings show you exactly WHAT and HOW to fix, step-by-step.

Tells HOW TO "Cash In" ON THE BIG DEMAND FOR RADIO-TY REPAIRMEN

Over 25 million TV sets over 100 million radios! Make nice extra money Just fixing sets for friends and neighbors in your spare time . . . or start your own full-time repair busi-

ness. Book tells exactly how to get started;
which tubes to stock;
how to make a service
call Actually start fixing sets and making
money before you're
half-way through
book.

Save Money on Your Own Set

Save \$50 to \$100 a year fust in installing, remaining, and servicing your awo TV set. Book tells which controls to adjust or takes to replace if pictors is entirely dark — blurred—aplit—distorted—off center—titled—wignies and weaves—too pair too bisch—litters—snow effects—drifts—etc.—etc.

The author is Associate Editor of Electronics Magazine. He spent FOUR years making this one-volume course practical and easy-to-understand—even for an "un-handy" beginner.

Here's everything you need to know about where and how to buy tubes and parts, where and how to get an official circuit diagram for any receiver; how to choose and use basic tools; how to test tubes WITHOUT a tube tester; how to use 58 common TV controls; how to "diagnose" and "cure" common radio and TV troubles; how to fix loudspeakers, phono pickups; how to install and check antennas; and much, much more.

SEND NO MONEY

Examine this book for 10 days BEFORE you decide if you wish to own it. Try it out FREE on your own or a neighbor's set. See how simple and easy it makes nearly every repair job. Make it pay for itself in 10 days or don't keep it! Mail coupon to: McGruw-Hill Book Co., Inc., Dapt. PS-3, 127 Wast 41st St., New York 34, N. Y.

Parakeet Problem: No Eggs

I read your article on parakeets [Oct. '53, p. 140] and just loved it.

I have a pair of 'keets and think there's nothing like them. However, I now have a problem. I'm trying to breed my pair, I put them together about two months ago. Two weeks after they were together, I hung the

nest box. The birds act loving enough-but

no eggs.

The female won't let the male near the nest box, It's a cardboard box with an opening at the top with a perch just below, and on the bottom I have a concave wooden board. The female is forever going in and chewing the cardboard to little pieces. I noticed one day that she was piling them in the concave part only, I know they don't build nests, yet I can't understand her doing this.

MRS. PRESTON L. STOCUM, Selinsgrove, Pa.

Our staff expert on parakeets warns that you shouldn't pin too much hope on your hird's new passion for tearing up card-hoard—some parakeets are just destructive. He suggests that you: (1) get a new nest box, preferably of wood; (2) get a new male.

Why Red, Blue and Green?

In your story on color TV in last November's issue [p. 120], why did you state that it would be best to have an electron gun for each of these three colors: red, blue and green? Why not, instead, for red, blue and yellow? Blue and yellow make green, so

off the you. May compare now for this 2 lender EREE! **NRI Training Loads to**

h Jindin-TV service that in our space time, Hig TV:

work than we can handle."-Bangley, Jr., Beffelt, Va.

Happer, Nitre, West Va.

Your engine's life depends on a film of oit 3 times thinner than cellophane tape!

The vital space between your engines piston rings and cylinder walls is only 1/1000th of an inch.

Use high-quality Quaker State for the <u>super film</u> that gives greatest oil mileage

SUPER FILM! That's Quaker State's name for the film of oil so pure, so heat-resistant, so high in quality it provides perfect lubrication for your car's engine. Quaker State Motor Oil is refined from 100% Pure Pennsylvania Grade Crude Oil—nature's best. It is the result of 50 years of continuous improvement and specialization in automobile lubrication. Made to meet the extra demands of today's high-compression engines—to give them complete protection.

Quaker State Motor Oil is made to suit the requirements of all makes of cars and for every type of service. Ask your dealer.

QUAKER STATE OIL REFINING CORPORATION, OIL CITY, PA. Member Pennsylvonio Grade Crude Oil Association

you could have both green and a true yellow by using red, blue and yellow as primaries.

IBA FRANKEL, Pelham Manor, N. Y.

Color TV is basically different from painting, printing and color movies. Instead of using pigments to subtract certain colors from white light and reflect the remainder to the eye, it adds light of different colors together and directs the mixture to the eye.

In an additive system like this, the best primaries are red, blue and green. You can create most other colors by mixing light of these three in the proper proportions. You'd get yellow, for instance, by mixing green and red

That Sewitching Twitch Again

What happens in dowsing [Oct. '53, p. 99] is that the magnetic field of minerals or the electric field of mining water affects the nervous systems of certain highly sensitive humans who possess the sensory gifts of migrating, homing and tracking animals. This results in spasmic nervous and muscular reflex actions to cause the divining rod to dip.

TED POWELL, Great Neck, N. Y.

Likes Beginning at the End

I agree with the readers who have declared that they prefer to page through magazines from back to front. I have a similar approach to projects in my shop.

I picture the finished project, then start

backwards until I am at the starting point of selecting the kind of lumber that I want to use.

DEAN R. MAYES, Pine Grove Mills, Pa.

Endorses Bible Story

I wish to compliment the editors for the excellent article by Herbert Yahraes in the December, 1953, issue [p. 86], "Infrared Rays Clarify Bible Texts."

Mr. Yahraes has done an accurate and attractive job of writing, and the editors by

INVENTORS

Learn how to protect your invention. The U. S. Patent Laws provide that any new and useful art, machine, article of manufacture, or composition of matter, or any new and useful improvement thereof, may be patented if the act of invention is involved. Therefore, every inventor with a valuable invention should take advantage of the Patent Laws and proceed for patent protection in order to safeguard his rights.

A patent gives the inventor the exclusive right to prevent others from making, using, or selling the invention claimed in the patent for a period of seventeen years.

The Patent Laws were enacted for the benefit of the inventor to give him protection for the features of his invention which are patentable. These features must be properly and concisely set forth and claimed in a formal application for patent, in order to comply with the requirements of the Patent Laws. For that reason, unless the inventor is familiar with patent matters, he should engage a competent registered patent attorney or agent to represent him. We are registered to practice before the U. S. Patent Office and are prepared to serve you in the handling of your patent matters.

A specially prepared booklet entitled "Patent Guide for the Inventor", containing detailed information with respect to patent protection and procedure, together with a "Record of Invention" form will be promptly forwarded to you without obligation upon request.

CLARENCE A. O'BRIEN & HARVEY JACOBSON

publishing the article have struck, I am sure, a new vein of popular interest.

REV. ELDON W. KOCH, College Park, Md.

That Cadillac on the Cover

Since when has Cadillac, or any other American automobile company, for that matter, been producing an automobile with a right-hand drive in recent years? Better take a look at the Caddy on the cover of your February issue.

FREDERICK M. DENNY, Milford, Conn.

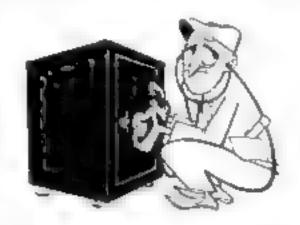

Our cover artist insists that he intended that Caddlac for export to England, where all cars wear the steering wheel on the right.

No Tip-Off for Burglars

In your November issue [p. 161], Carl Ayars said he would like to see them make a ratchet device to drown the sound of falling safe-combination tumblers.

Unless Mr. Ayars has a very old-style safe, he need not worry about a burglar hearing any sound from operating the combination which will tell him how to set the dial to unlock the safe.

Modern safes have from three to five or six rings or disks, in each of which a slot is cut. To unlock the safe, all of these slots must be in line in a certain position in rela-

tion to a lever or to a bar which falls into the slot or slides into it, as the case may be. Neither lever nor bar comes into contact with the disks while the combination is being operated and therefore there is no sound to indicate the position of the slots.

The sound heard when turning the combination is the striking together of the lugs or pins in the disks which cause them to turn to the unlock position. The burglar cannot possibly tell what the relation of the pins is to the slots, so cannot open the safe by "hearing the tumblers fall." Old-style safes have a lever which rides the

Ride the newest, most exciting Roleigh of them all—the beautiful Sports light Coaster with the new Tri-Coaster Hub!

The Sports Light Coaster, only bicycle with a safe, safe coaster brake and 3-speed gear! All this plus an emergency front hand brake

And don't forget the handsome precision-built Sports Light Roadster, easy-to-handle Roleigh favorite at only \$63.75.

Write to

Raleigh Industries of America, Dept. P - 687 Boylston St. - Boston 16, Mass.

INVENTORS

If you believe that you have an invention, you should find out how to protect it. The first step is to have a search made of the prior pertinent U. S. patents. If a report on this search indicates that the invention appears patentable you can apply for a patent, and the specifications and claims should be prepared.

The firm of McMorrow, Berman & Davidson, with offices in Washington, D. C., is qualified to take the necessary steps for you. We can make a preliminary search on your invention, advise you whether we think it can be patented, and prepare your application for patent.

Unless you are fully familiar with the U. S. Patent Laws, we recommend that you engage the services of a Registered Patent Attorney to protect your interests. The patent laws are your laws. A patent gives you the right to prevent others from making, using or selling the invention claimed in your patent for a period of 17 years.

Use these patent laws for your protection. Investigate whether your invention can be patented. If you have what you believe to be an invention, we suggest that you have this firm make a search for you.

Send for a copy of our Patent Booklet entitled "How To Protect Your Invention," containing information about patent protection and patent procedure. Along with this we will also send you an "Invention Record" form, for your use in writing down and sketching details of your invention We will mail them promptly. No obligation. They are yours for the asking.

edges of the disks and can be opened by hearing or feel or both.

C. L. Bossmeyer, Rockford, Ill

Would Limit Cars to 70 M.P.H.

Instead of building superhighways and blaming the teen-agers for the many accidents, blame the car manufacturers. A better-constructed body with less horsepower would save a lot of lives.

The extra comph that Wilbur Shaw tells about getting him out of a tight spot [Nov. '53, p. 99] is okay for a driver of his experience, but I imagine a lot of times that extra comph will make a less experienced driver try to pass and get into trouble.

JOE H. KLEIN, Lancaster, Wis.

A Hut That Sprang from Print

I enclose a photograph of handswork of mine that resulted from reading Jerry Parker's article on "How I Built the Hut" [June '53, p. 178].

My version, variously known as the Wigwam or the Doghouse, used salvaged 10foot crossarms for framing floor and roof sections, resulting in a floor space of approximately 100 square feet.

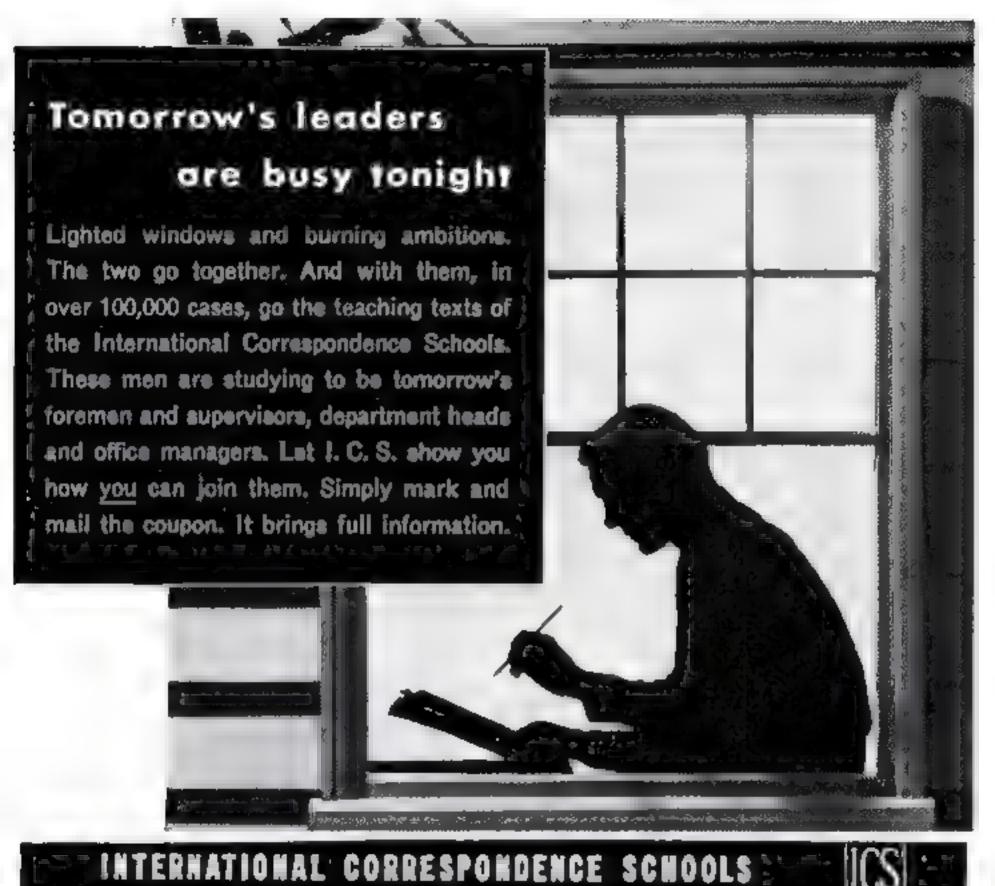

The front section, featuring a Dutch door, is covered with green asphalt shingles, while the roof is aluminum siding, painted with green metal paint. The whole structure is leveled on concrete blocks. At present the hut is used for storage. But it's a fair bet it will wind up in the summer as an overflow sleeping cottage.

J. E. McKinney, West Hill, Ont.

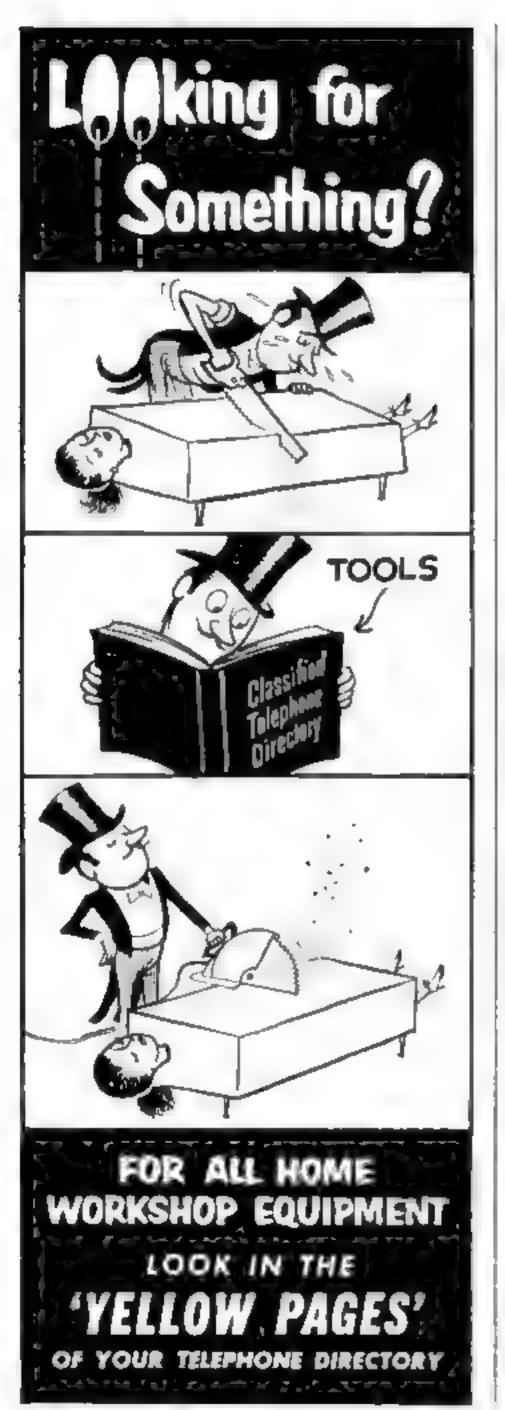

Helicopter Blows Out Fires

Last August, you published a letter [p. 8] from Robert J. Mills of Valley Stream, N. Y., suggesting helicopter fire engines.

A friend of mine, flying a training heli-

copter, actually used his craft for this purpose-in an unusual way. From the air he spotted a landing accident on a field. The crashed plane began to burn. My friend flew over it and hovered there, blowing out the fire with the down-wash of his rotors.

The CO. found out about it and tried the same thing on a junk airplane that had been dehberately set afire. The helicopter again blew out the blaze. On the third try, however, the tank on the junker blew up, nearly clobbering the hovering helicopter. That ended the experiment.

Seriously, though, I believe that helicopters will eventually take over from surface vehicles for fighting fires and for ambu-

lance and police work.

Less seriously—that down-wash also spins a pheasant in nicely or drives a cornfield quicker than a good dog.

> ORVILLE LIPPERT Reserve Helicopter Sqdn. 731 Grosse Ile. Mich.

Settling an Atomic Dispute

I think you made a mistake in printing the statement that "there are only 90-odd atoms" [Jan., p. 173]. I say there are approximately 1,080. As proof of this statement, I refer you to General Electric's Chart of the Nuclides, revised November, 1952.

FRANK GLACOBBI, Trenton, N.J.

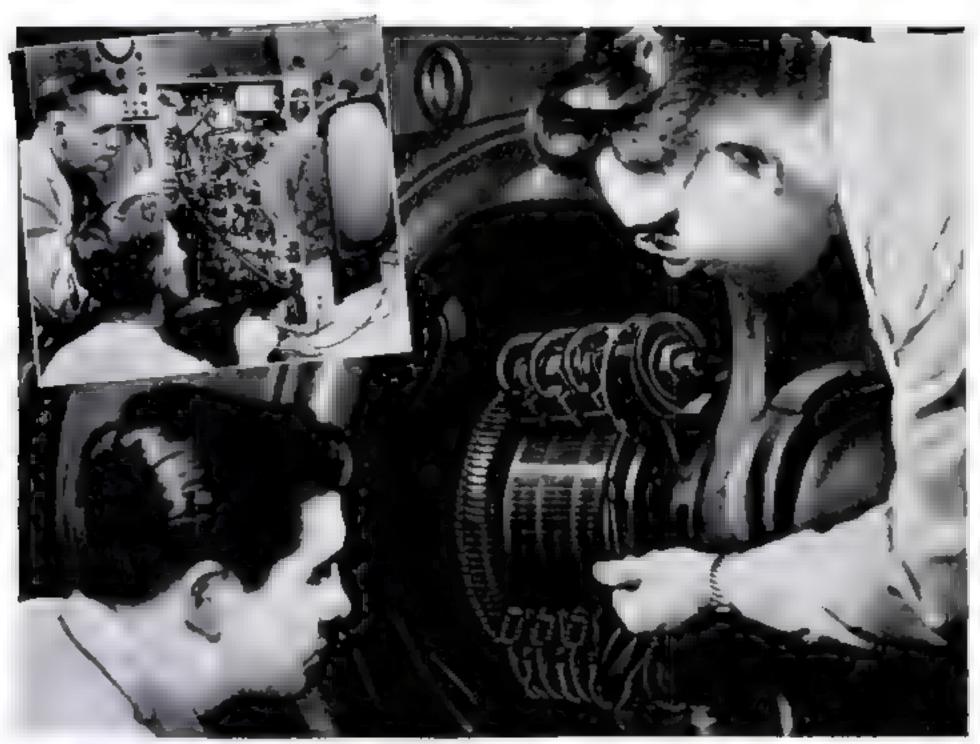

By "atoms" we meant basically different kinds of atoms-chemical elements-and there are 90-odd of these, indicated by the 90-odd different atomic numbers identifying the elements. If you count all the subdivisions of the elements into isotopes, as the GE chart did, you will, of course, get a much higher figure.

Cobb Got a Push from the Wind

You stated in your December issue [p. 12] that John R. Cobb set the world's absolute speed record for automobiles by traveling 394.196 m.p.h. I read in the Encyclopedia of Sports that Cobb was the first man to go over 400 m.p.h. in an automobile. Is this right?

EUGENE NIERODA, Brooklyn, NY

Both statements are correct. Cobb established his record by averaging out his speeds in one run against the wind and one run with the wind. On the run with the wind, he did go more than 400 m.p.h.

TRAIN FOR A FUTURE IN Electricity or Television-Radio 17'S THE ACTUAL SHOP TRAINING AT

COYNE THAT MAKES THE DIFFERENCE!

Trained men are vitally needed now whether 17 or up to 45. Get a better rating, if drafted—an essential job in industry, if not in A FIELD THAT OFFERS A REAL FUTURE.

WE TRAIN YOU IN CHICAGO

Learn the easier, practical way at Coyne, on real, full size equipment. No advanced education or previous experience needed. You learn better the Coyne way.

Train in the shope of Coyne—where thousands of successful men have trained for over 55 years—Coyne is the largest, oldest, best equipped school of its kind—established in Chicago in 1899.

Can you profit by their mistakes?

"Not getting enough education"

You needn't make that mistake. You can get that better job, those big promotions, the regular raises that so many I.C.S. students report. And you can do it without

"going to school," without interfering with your present job or your social life.

YOU can study with I. C.S. at home, in your spare time!

Wrong choice of career"

When you study with I.C.S. you have 303 courses to choose from. And part of our job here at I. C. S. is not only giving you instruction

but making sure you pick the course that's right for you!

YOU get expert guidance FREE from I. C. S. !

"Failed to seize opportunities"

Your opportunity is right here on this page. Don't pass it by. Don't put it off. Write now and let us send you "How to Succeed" and

full information on any of the fields listed below.

YOU get 2 FREE books if you mail the coupon today!

Inventors.

The following are the usual preliminary steps to take toward patent protection.

You are advised first, to make a disclosure of your invention. Date, sign and have this document witnessed by two or more persons who are capable of understanding your invention. The "Evidence of Invention" form mentioned below, we offer as a convenience in making your disclosure and in starting action leading toward patent protection.

Mail your disclosure to the registered patent attorney or agent whom you select to assist you, together with a letter authorizing him to conduct a preliminary search among previously granted U.S. patents for similar types of invention. He then prepares for you a report on the probable patentability of your invention and, if the report is favorable, recommends the further course you should take.

This firm is registered to proctice before the U.S. Petent Office and is evallable to essist you in the preparation and presecution of patent applications. We shall be glad to send you without obligation, the "Evidence of Invention" disclosure form mentioned above and our instructive booklet, "Patent Protection for Inventors".

Mounted on your dashboard Stewart Warner's new driving gauge and engine analyzer tells as you drive how to get more miles per gation -how to get top performance from your engine.

Motor Minder warns immediately of faulty performance of spark plugs, carburetor, valves, timing, rings, manifold, multer, etc. Swivel mounting makes illuminated dial easy to read from any angle. Simple to install-complete instructions included.

Get it at your dealer's. If he cannot supply you, send his name and address, and your check or money order for \$10.95 to Stewart-Worner. Your Motor Minder will be sent to you direct—propoid!

Instrument Division, Department P-34 1840 Diversey Parkway, Chicago 14, Illinois

Now you can build your own boat with simple hand tools and no previous building experience. It's easy-you save half the cost. Each part of the famous us mak it boat kit is procision machined—frames, stem, transom, keel, and planking, etc., are ready for assembly. Kits are complete in every detail, Only the finest materials are used. For high performance, safety and durability investigate U-Mak-it boat kits, today!

MEN PAST 40

Afflicted With Getting Up Nights, Pains in Back, Hips, Legs, Nervousness, Tiredness.

If you are a victim of the above symptoms, the trouble may be due to Glandular Inflammation. A constitutional Disease for which it is futile for sufferers to try to treat themselves at home. Medicines that give temporary relief will not remove the cause of your trouble.

Most men, if treatment is taken before malignancy has developed, can be successfully NON-SURGI-CALLY treated for Glandular Inflammation. If the condition is aggravated by lack of treatment, surgery may be the only chance

· NON-SURGICAL TREATMENTS

The NON-SI RGICAL treatments afforded at the Excebuor Institute are the result of 20 years research by scientific Technologists and Competent Ductors.

The War brought many new techniques and drugs. These added to the research already accomplished has produced a new type of treatment that is proving of great benefit to man as he advances in years.

The Excelsion Institute is devoted exclusively to the treatment of diseases of men of advancing years. Men from all walks of life and from over 2000 cities and towns have been successfully treated. They found southing and comforting relief and a new sest in life.

EXAMINATION AT LOW COST

On your arrival here, Our Doctors who are experienced specialists, make a complete examination. Your

condition is frankly explained to you with the cost of treatment you need Your decision is then made. Treatments are so mild that hospitalization

is not necessary—a considerable saving in expense. Are often anacclated with Glass over totil assemation. We can frent these for you at the

same time.

RECTAL

The Excelsior Institute has published a New FREE Book that is fully illustrated and deals with Diseases peculiar to men. Gives excellent factual knowledge and could prove of utmost importance

At Last! The Battery the Public has been clamoring for!

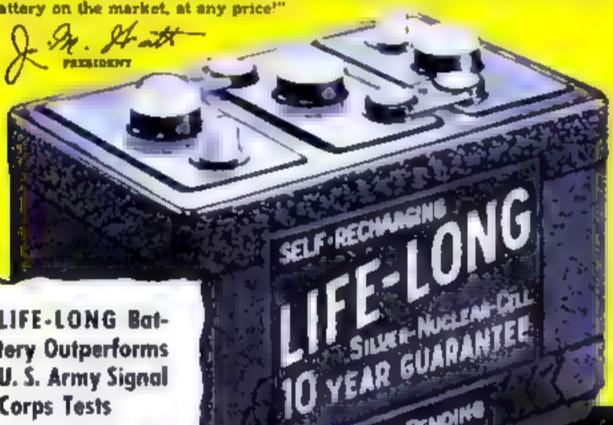

Read below what Reader's Digest says about this European invention and the Battery-Cartels that have and heretofore kept it off the U. S. Market.

"I invite your fair-minded examination of the facts!"

"The superiority of the Life-Long Battery is so great that I want you to have all the facts, including actual test reports. These show how Life-Long's revolutionary, exclusive 10 year guarantee is possible, and prove the amazing details about

Life-Long's terrific starting ability at all temperatures, and its unprecedented ability to re-charge itself I invite you to compare Life-Long with any other battery on the market, at any price!"

LIFE-LONG Battery Outperforms **U. S. Army Signal Corps Tests**

A Life-Long Butfery taken right off the production line recently was subjected to the most rigid Signal Corps test for use in Arctic weather It not only met these tests in every respect, but actually delivered full power at 20 "s further below zero than regulred.

PATENT PENDING This European invention is the Battery that's built to OUTLAST the Car! OUTPERFORM all other Batteries! OUTSELL ALL Competition ! Yet it Costs No More!

Deliver 300% Greater Capacity

MONEY BACK GUARANTEE

'After careful consideration, I finally chose the Life-Long Battery to see us through this graeling 2000 mile race."

Hundreds of Letters...

F H C . a nationally known race driver, South Hadley, Mass.

'It's amazing to me that your Life-Long Battery, installed on my Buick in 1946, is still performing like a new battery."

M D., San Marino, Calif

"I am glad I sent for this most wonderful of all batteries. I connot proise it too highly-only that I will never own any b se Life-L.R.E., C -05. La-Lang."

All Life-Long Batteries are sold on an unprecedented replacement or money back guarantee. This exclusive 10-year guarantee makes the Life-Long Buttery cost less, year for year, than any other battery sold! You can't lose, so why wait? If dealers cannot supply you. mail this coupon.

> Dealer-Distributor Territories Still Open. Phone, wire or write for details.

BATTERY MANUFACTURING CORPORATION 11760 W. Fice Blvs., Las Angeles 64, Galil. Cable: LIFELONG

Reader's Digest EXPOSE

of the Battery Cartels,

Guarantee

Reader's Digest recently told of the invention of the longer-life type of battery in Europe years ago and how the large battery manufacturers in this country collaborated for years to prevent its manufacture...how public; clamor and the Sherman Anti-Trust Act: broke the "cartel" and helped make possible the successful marketing of this European type battery. Now, the Life-Long Battery that couldn't be suppressed is yours at nominal cost!

Independent laboratory tests prove LIFE-LONG Batteries....

> Have Tremendous Self Re-charging Ability

Withstand Sub Zero Temperatures

WHY RISK BATTERY FAILURE

Test after test proves the Life-Long's ability to deliver up to 2000 AMPS Instant Power Output at all temperatures to 70° below zero, and to re-charge itself almost instantly Now you can buy a Life-Long Battery for your car or truck at the cost of an ordinary battery

That Loosen **Need Not Embarrass**

Many wearers of false teeth have suffered real embarrassment because their plate dropped, slipped or wobbled at just the wrong time. Do not live in fear of this happening to you. Just sprinkle a little FASTEETH, the effective (non-acid) powder on your plates. Holds false teeth more firmly so they feel more comfortable. Does not sour, Checks "plate odor" (denture breath). Get FASTEETH at any drug counter. FEER Write for generous sample to 57 Wall St. Binghamton, N. Y.

Make Money Manufacturing Concrete Drain Tile

Manufacturers of concrete drain tile are in the driver's ecat. Why? Because their basic costs are not burdened by freight, distribution and breakage costs—items which the clay tile people have to pass along. Net results concrete tile can sell'for less, yet show a generous profit

The market is big-and getting bigger. Not only because of increased farm drainage, but also because drain tile are needed in home building, reclamation projects, highway construction, and many other purposes.

Tile made on the Champion are outstanding in quality -dense, strong, uniform and truly round. All sizes up to 12" diameter. Basy to make, because the Champion. Machine is simple, compact, and requires no skilled labor. Business is a low-investment opportunity, with equipment available on terms. Write for catalog.

Without Nagging Backache

Nagging backsche, loss of pep and energy, headaches and dizziness may be due to slowdown of kidney function. Doctors my good kidney function is very important to good health. When some everyday condition, such as atress and strain, causes this important function to slow down, many folks suffer nagging backache-feel miserable. Minor bladder irritations due to cold or wrong diet may cause getting up nights or frequent passages.

Don't neglect your kidneys if these conditions bother you.

Try Doan's Pills-a mild discretic. Used successfully by millions for over 50 years. It's amazing how many times Donn's give happy relief from these discomforts—help the 15 miles of kidney tubes and filters flushout waste. Get Doan's Pills today!

WILL YOU SMOKE MY NEW KIND OF PIPE

30 Days at My Risk?

By E. A. CAREY

Pipes are my hobby—not my business—yet I've discovered a completely new smoking principle. All I want is your name so I can write and tell you why I'm willing to send you my pipe for 30 days smoking without a cent of risk on your part.

My new pipe is not a new model, not a new style, not a new gadget, not an improvement on old style pipes. It is the first pipe in the world to use an ENTIRELY NEW PRINCIPLE for giving unadulterated pleasure to pipe smokers.

I've been a pipe smoker for 30 years—always looking for the ideal pipe—buying all the disappointing gadgets — never finding a single, solitary pipe that would smoke hour after hour, day after day, without bitterness, bite, or sludge.

With considerable doubt, I decided to work out something for myself. After months of experimenting and scores of disappointments, suddenly, almost by accident, I discovered how to harness four great natural laws to give me everything I wanted in a pipe. It didn't require any "breaking in". From the first puff it smoked cool—it smoked mild it smoked right down to the last bit of tobacco without bits. It never has to be "rested", AND it never has to be cleaned? Yet it is utterly impossible for goo or sludge to reach your tongue, because my invention dissipates the goo as it forms!

You might expect all this to require a complicated mechanical gadget, but when you see it, the most surprising thing will be that I've done all this in a pipe that looks like any of the finest conventional pipes.

The claims I could make for this new principle in tobacco enjoyment are so spectacular that no pipe amoker would believe them. So, since "seeing is believing", I also say "Smoking is convincing" and I want to send you one Carry pipe to smoke 30 days at my risk. At the end of that time, if you re willing to give up your Carry Pipe, simply break it to bits—and return it to me—the trial has cost you nothing.

Please and me your name today. The coupon or a postal card will do. I il send you absolutely free my complete trial offer so you can decide for yourself whether or not my pipe-smoking friends are right when they say the Carey lipe is the greatest smoking invention ever patented. Send your name today. As one pipe smoker to another, I'll guarantee you the surprise of your life, FREE. Write E. A. Carey, 1996 Sunnyside Ave., Dept. 1443. Chicago 40, Illinois

E. A. CAREY, 1920 Sunnyside Ave., DEPT., 1443, CHICAGO 40, ILLINOIS

Address ...

Please send facts about the Carey Pipe, Then I will decide if I want to try it for 20 Days at YOUR RISK. Everything you trust is free. No salesman is to call.

BUILD YOUR OWN CABIN, RANCH HOUSE or HIDEAWAY

For the Cost of Materials Alone!

Here's an amazing new book that shows you how to build your own cabin, lake cottage, modern ranch house, or mountain retreat at lowest possible cost! In all, you have 27 different, easy-to-follow plans to choose from.

SIMPLIFIED DETAILS

You don't need expensive professional help when you have "How to Build Cabins and Ranch Houses" at your side. This brand-new book gives you 256 pages of step-by-step instructions and hundreds of "show-how" illustrations to help you lay the foundation, build and caulk walls, construct stairs, lay floor boards, estimate costs. You'll find detailed plans that show you how to make windows, build fireplaces and chimneys, cut doors, install plumbing and lighting. You'll also learn how to prevent wood decay, build rustic furniture and lots more! It's truly a home builder's "dream book."

SEND NO MONEY NOW!

Detach and mail coupon below. When book arrives, pay postman the low, bargain price of only \$2.49 (plus postage). Examine it for a full week at our risk! Then, if you don't agree you would ordinarily pay twice the price for such a big, jam-packed book, simply return it for prompt refund. But HURRY—get your copy while they last!

TRIPLE-M PRODUCTS DIVISION

THE MUTCH & MIRRYWEATHER MACHINERY CO. + 36467 Original Road + Bates Milks, Obio + Established 1984

Start a profitable manufacturing business in spare time

with your own home as your headquarters

RIGHT at this moment there is a tremendous demand for new business enterprises in a branch of the plastics industry. Fortunately, this is a type of manufacturing business that does not require heavy or expensive machinery, rented space for storage, production or sales. A portable hand machine does the work wherever electric current is available, and the working area can be in almost any part of your home.

The opportunity that is open to you today, is to meet this growing demand in a new industry by establishing yourself as the manufacturing agent in your own trading area. Several hundred of our machines are aiready in use in both large and smail communities. Some are even being operated successfully by women whose family duties make it necessary for them to be at home during the day, but whose family income is not enough to meet rising expenses. Most are being operated by men. Many started in spare time just to pick up an extra five or ten dollars for an evening's work. They found the work so profitable that some have now given up former jobs to devote full time to a business of their own.

One of our manufacturers gets all of his business by mail. Orders and money come to him in envelopes and he sends his products out the same way. Another delivers his entire output to stores in the vicinity. An-

other does a wholesale business supplying other manufacturers who do the selling. Still another works with advertisers in the manufacture of plastic advertising novelties and specialties.

The operation of the machine is simple and easy for anyone to learn. It does not require any knowledge of chemistry, mechanics, or electricity. And what some say is best of all, a manufacturing business like this enables a person to make good money without any house to house canvassing. The machine turns out from \$5.00 to \$15.00 worth of work per hour and it can be operated for as short or long a time as you wish.

We have prepared a simple step by step instruction manual that not only tells how to operate the machine, but also tells how to get the business coming in at a profitable clip right from the start. We will lend a copy of this book to any serious minded man or woman with the

understanding that a copy will be given them free if and when they purchase a machine—or the copy we lend can be returned if you decide not to go into the business. Reading it will not cost you anything.

If you are interested in a nice little home business that can bring in an extra \$60 or more for ten or twelve hours work in spare time, send your name, Ail information on the book and machine will be sent free, postage prepaid and no salesman will call to bother you, read about it in the privacy of your own home without outside pressure and then decide whether you'd like to take the next step. Address your envelope to me in person. Send me the coupon below. Or, if you prefer send your name on a post card and ask for "Free information on starting a manufacturing business at home." Either way, send your name today and find out about this wonderful new fast growing money-making business.

Improved

Ford batteries are specially sealed in heavy, one-piece, impact-tested outer cases designed to give excellent protection against extreme temperatures. They are cycled from full charge to discharge bundreds of times to provide proper function and long life.

Get the Battery that's made <u>right</u> for your FORD

All Genuine Ford Parts—like the battery shown above—are made right... to fit the specifications set by the men who originally built your Ford!

Why wait for battery failure to stall your car when a simple dealer test can determine the condition of your present battery? If replacement is advisable, he can recommend the Ford battery with the right capacity for your car's electrical system. Remember, every Ford battery has a liberal warranty. Be sure—have your battery checked today and...

Atomic Fuel Were Shared

be healthier, wealthier and wiser, say AEC scientists, discussing President's daring proposal to United Nations.

President Eisenhower's dramatic proposal to the United Nations that a world pool of fissionable materials be created for peaceful purposes had no greater appeal to any hearts and minds than those of HUCLERY SCIENCE. POPULAR SCIENCE MONTHLY invited some of them, on the staff of the Atomic Energy Commission's lubs at Brookhaven. N.Y., to tell you what they think of the plan's potentialities. Their discussion, recorded on magnetic tape, is transcribed here. The various speakers are: William A. Higinbotham, Harry Palevsky, Drs. Clarke Williams, Marvin Fox and Charles P. Baker, physicists: Mrs. Beth Baker, a chemist: and II esley S. Griswold, of PSW's editorial staff.

R. GRISWOLD: What do you people think of the President's plan to pool fissionable materials for peaceful uses?

Dr. Fox: I think it's brilliant—a stroke of genius to solve this whole dilemma that has confronted us for the last half-dozen years

Mr. Palevsky: It provides a central focal point that serves a very necessary purpose. It starts us off.

Dr. Baker: The Acheson-Lilienthal proposal, in 1946, was a brilliant proposal, but in order to get anywhere, you have to start. And with that proposal you had to start by taking off all your clothes and jumping in. Whereas in Eisenhower's proposal, you say, "Take off your coat, loosen your tie, and sit down." There are many people who will do this that won't go the whole way.

Griswold: If you were given the task of setting up such a pool, would you anticipate getting large amounts of fis-

TOO "HOT" TO HANDLE casually, radioactive isotopes for medicine, industry and many

tields of research are dealt with at tongs' length. The man at left above is among a

FROM CANADA comes a fragment of pitchbiende, chief high-grade source of uranium

"cutie pie" radiation detector at an isotope. Such routines may soon become worldwide.

sionable materials, or small amounts?

Mr. Higinbotham: The fact is that no countries except Russia and the U.S. (which are well stocked) and England and Canada have the capital to buy—or, as a matter of fact, have access to—a substantial amount of source materials

You see, thorum is useless until you've gone a long way with uranium and its products. And the U.S., Great Britain and Canada have virtually cornered the free-world market in uranium.

Palevsky: So the three of us and Russia control all the source materials, except for truly trivial quantities.

Higinbothum: The U.S. and Russia control a lot of materials, but they don't own them. I think the first step is to get these two major parties to loosen up on their controls, so that other people can play around.

I'm thinking of natural uranium and thorium ores—source material.

Griscold: You think, then, that it would be ores that would be contributed to this pool, and not enriched stuff?

Higinbotham: Yes.

Griscold: How would you ship the materials to the pool?

Higinbothum: I suspect that you are thinking of this pool as a big concrete building somewhere, loaded with radioactive stuff. It seems to me that what Eisenhower contemplates will be a holding company, like the AEC. The stuff will be stockpiled all over the world. It will go by the pound or the truckload

FROM THE COLORADO PLATEAU of Utah and Colorado come bright chunks of carnotite.

FROM THE BELGIAN CONGO, this rock contains a fat vein of universally sought pitchblende.

or the shipload direct from the donor to research laboratories in different countries all over the world

Griswold: Is it dangerous to ship? Would it require shielding?

Fox: Not in ore form.

Griswold: What does the stuff look like?

Fox: Well, uranium is shiny silver when freshly made but tarnishes to brown or black quickly when it's exposed to the air.

Griswold: I've heard that it can be obtained in fairly small ingots, almost the

size of flashlight batteries.

Fox: You can get it in any size you like.

Griswold: What countries besides the ones you have already mentioned would

HEAVY ARTILLERY against cancer is this doughnut-shaped gun that sime rays from Cohalt 60 at the universal enemy, Atomic "weapons" like these may become available to everyone.

be likely to have surplus fissionable materials for the world pool?

Baker: I think you should include the Belgian Congo, South Africa and Czechoslovakia—if you can distinguish that country from Russia.

Higinbotham: You'd also include India and Brazil, wouldn't you?

Baker: Oh, yes.

Higinbotham: India and Brazil would most assuredly be interested in the power potentialities of a world atomic pool. Brazil is peculiarly poor in water resources. The waterfalls are a long way from the coast. The Amazon is flat for

many, many miles inland. I think the Brazilians are working small streams mostly.

As a result, Rio and Sao Paulo, the two biggest cities—about 200 miles apart with decidedly mountainous country between—have a common power supply. And they are so hard up for electricity that the different sections of the cities are shut down in succession.

Griswold: Is it possible that we can have smaller atomic power plants than any yet built—plants that could be used, say, to run planes and trains?

Fox: Oh, yes.

Dr. Williams: Especially Russian trains, which are broader gauge. [Laughter.]

Griswold: But not small enough to run automobiles?

Higinbotham: Well, the only possibility in this line is that someone might design a really good battery that you could have charged at an atomic power station, and then run your car by electricity.

Baker: There are other ways. If you had cheap power you could store it chemically by taking water and carbon dioxide and making gasoline out of them, then pouring the gasoline into your car. [Laughter.] Well, if you had cheap power, you could do this.

Palevsky: That's true. If you can make cheap power, there are just unlimited processes that could be developed.

If you can reduce the cost of power by, say, 20 or 30 percent, I think that many new industrial processes would just spring up overnight. They will then be feasible.

Grissoold: How could atomic power be useful in barren lands-like Arabia or the Australian desert?

Palevsky: Why, in making fertilizer. You need power to make fertilizer.

Griswold: Yes, but what about water? Water would still be the essential ingredient, wouldn't it?

Baker: If you have the energy, you can demineralize sea water. If you have the energy, you can also pump it as far

as you like, if you're willing to pay for it.

It's not a matter of discovering any fundamentally new principle. It's a matter of getting the science, the technology

and the economics together.

Palevsky: Even in those desert regions, I think if you go down far enough, you get water. It just happens to be uneconomical to pump it now. But cheap power from atomic energy would easily make the pumping job feasible.

Griswold: Have we yet come up with any practical atomic explosive for changing the course of rivers, or for changing the course of hurricanes or tornadoes?

Mrs. Baker: Well, you'd pollute your

rivers, for one thing.

Palevsky: And if you dropped an atomic bomb into the eye of a tornado, you'd scatter lethal radioactivity all over the countryside.

Buker: The Eastman Kodak Company would certainly be unhappy. [Laughter.]

Grimeold: If the proposed atomic pool is going to exist in several different places, scattered throughout the world,

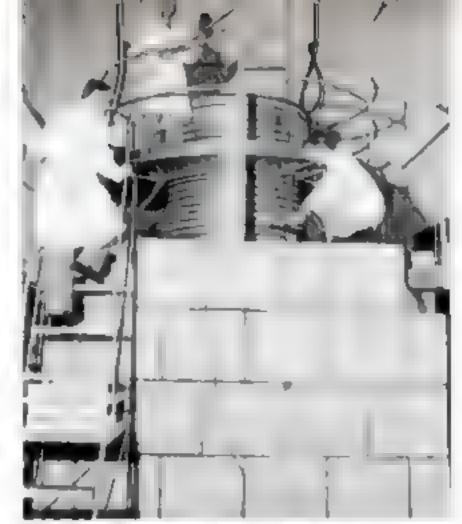

how can it feasibly be guarded?

Higinbotham: First, is it worth guarding? Probably all the material contemplated for the pool will not be enough to make a single atomic bomb. And when the atomic bombs in the world already are counted in the hundreds or the thousands, material that could possubly make one more is not really important.

Grincold: Isn't it true that, with the right kind of reactor and the necessary raw material, in the course of making atomic power you also make plutonium?

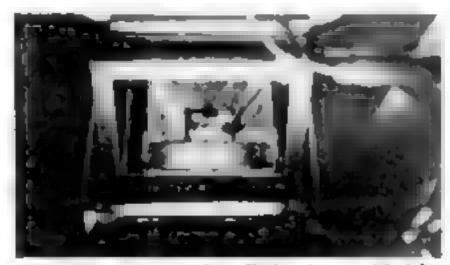

Higinbotham: Yes, but it isn't until you have really big power plants that the amount of plutonium you are going to produce in a year will be significant.

Baker: Besides, in order to make this plutonium useful, you would have to run your plant in a particular way and it would involve certainly an equivalent plant to extract the plutonium. In other words, if you went and looked at the power plant, you wouldn't need to be a detective to tell if people were

BABY REACTOR, with power of less than a single watt, is valuable for research but doesn't produce fissionable materials. It indicates growing flexibility of reactor size.

milking explosive plutonium from it. Grisscold: If you were a nation that had borrowed uranium from, say, South

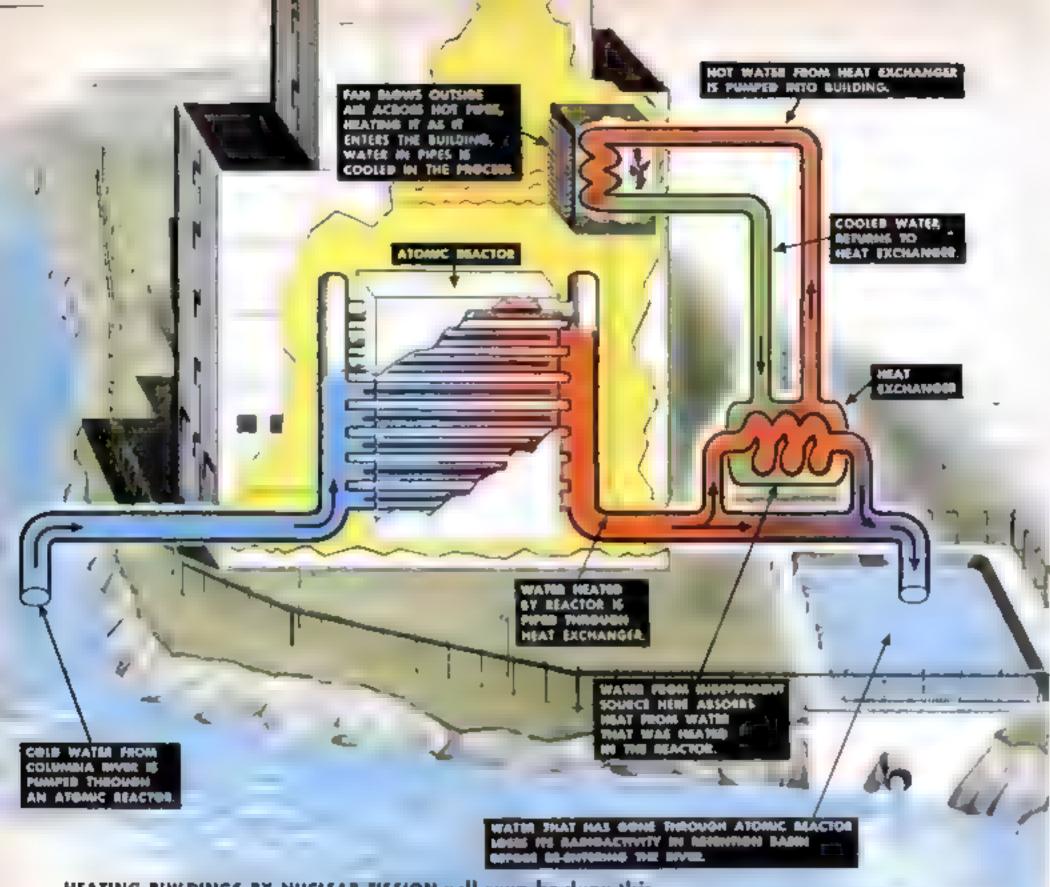

PEEP INTO A PILE at Oak Ridge is provided by looking into an overhead ntirror, which guides an operator with hand tongs when he is ready to withdraw radioactive samples.

Africa, and now had plutonium, where would you send the plutonium?

Baker: Send some back to South Africa, so that they can start their power

plant.

That is, I would think that if the pool delivers uranium to somebody and they use it in a power plant, and use the power for their benefit, then the plutonium which they make incidentally should, of a certainty, belong to the pool and might be sent to help make a quart of milk for every Hottentot, or whatever

HEATING BUILDINGS BY MUCLEAR FISSION will soon be done this way at the AEC's Hanford, Wash, plutonium plant. The tremendous heat generated in making plutonium would otherwise go to waste. The British proneered this practical process.

Wrs. Buker: Essentially, then, you could just rent the material, and then pay it back to the lender.

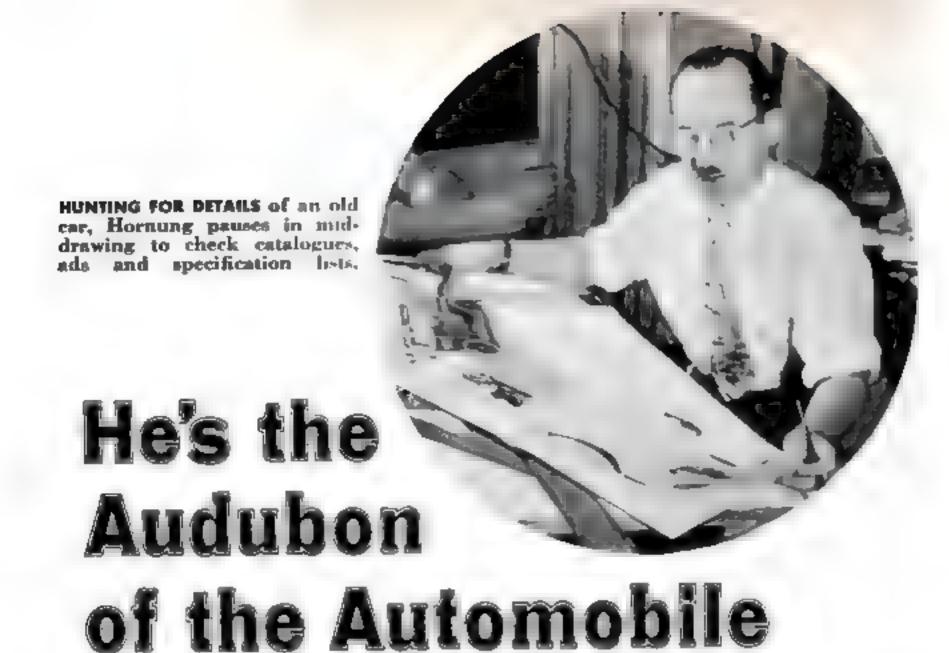

Higinbotham: It would be ideal if, when we allow another nation to take from the international pool certain material that had been allocated to us, we would also permit that nation's scientists to visit our laboratories, see our reactors, learn our techniques. Some of our scientists, too, would be expected to go to those countries and help them get started on their research—let them in on our know-how.

Williams: The information is fully as important as the materials, if not more so.

Higinbotham. This proposal of Eisenhower's really will be something that will be awfully hard for the Russians to turn down.

If you can get a start at talking on a practical level about these problems of the exchange of information and people and cooperation, there will certainly be an entirely different atmosphere from the one we're presently living in.

And one could hope that out of these discussions would come something at least as attractive as the Eisenhower proposal, and that this would be the beginning of breaking down the iron curtains that exist not only around Russia but around a good many of the rest of us, too.

C. P. Hornung stalks the rare and early birds of motordom and draws their portraits.

By George H. Waltz Jr.

AMERICANS scarcely knew one bird from another, unless they were edible, until John James Audubon painted their portraits, exact to the tiniest speckled feather.

Now a whole generation of car-loving Americans is getting acquainted with the gaudy and gleaming automobiles of the past-some of them very rare birds indeed-because a modern Audubon is drawing painstakingly authentic pictures of them.

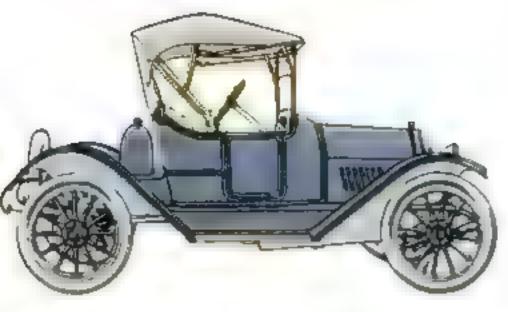

Clarence P. Hornung of New York City, whose gallery of America's earliest cars already includes 75 portraits, didn't take up the hobby that has become his booming business until 1949. Until then he was an industrial artist and specialist in creating trademarks and package designs.

One Saturday in September, 1949. Hornung happened for the first time to visit James Melton's Museum of Antique Cars at Norwalk, Conn. The quaint lines and vivid colors of the old vehicles fascinated him. As an artist, he was amazed

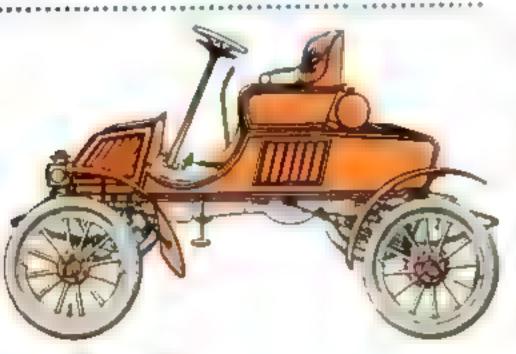

alluring rungbout in 1903 and called it "the best thing on wheels." Extra seats, top or delivery box could be "instantly attached."

MARCH 1954 07

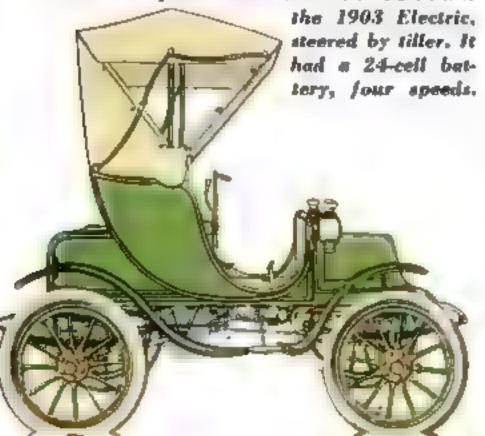

Chevrolet began making cars in 1912 and turned out 2,999 that year. In 1914 it produced the Royal Mail (above), a 24-horsepower, four-cylinder job that is called the modern Chevry's true ancestor.

dates its Rambiers back to 1900. This was the 1902 model. Actually, Rambiers were made by the Thomas B. Jeffery Co. until 1917, the year after Charles W. Nash quit Buick and bought out Jeffery.

Studebaker had been renowned for 50 years as a maker of wagons and carriages when, in 1902, it entered the automotive field with an electric car. This was

to find that no drawings or prints of them were available. No one up till then had ever made a pictorial history of the American automobile.

By the following Monday, Hornung had decided to create that history himself. He plunged into a program of research that in the following months took him to book shops, print dealers, catalogue collectors and old-time car salesmen. He gathered a mounting pile of flyblown catalogues, yellowed newspaper and magazine ads, specification lists and old photographs.

Soon he was armed with enough information to produce his first eight portraits: an 1877 Selden, an 1895 Duryea, an 1896 Ford, an 1898 Winton, an 1899 Packard, a 1902 Autocar, a 1903 Oldsmobile and a 1903 Cadillac. When colored prints of them had been run off, Hornung offered them for sale in a few small ads in New York newspapers.

The response was astonishing, Hundreds of orders cascaded upon his studio. In two months he sold 2,000 sets. Suddenly he was researcher, artist, publisher, mail-order clerk and shipping clerk all rolled into one

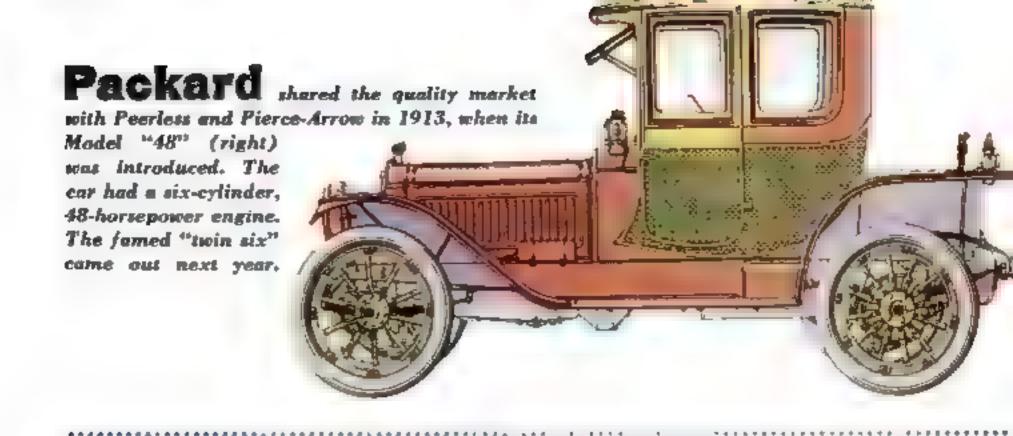

The Auto Bug, the Isser, the O-We-Go

Happily surrendering to the avid demands of old-car fans, Hornung went back to the "scrap" pile and the drawing board and began producing more portraits of the ancestors of today's automobiles. To date, 47 prints have been made from the 75 drawings he has completed. He plans to finish 25 additional drawings by 1955.

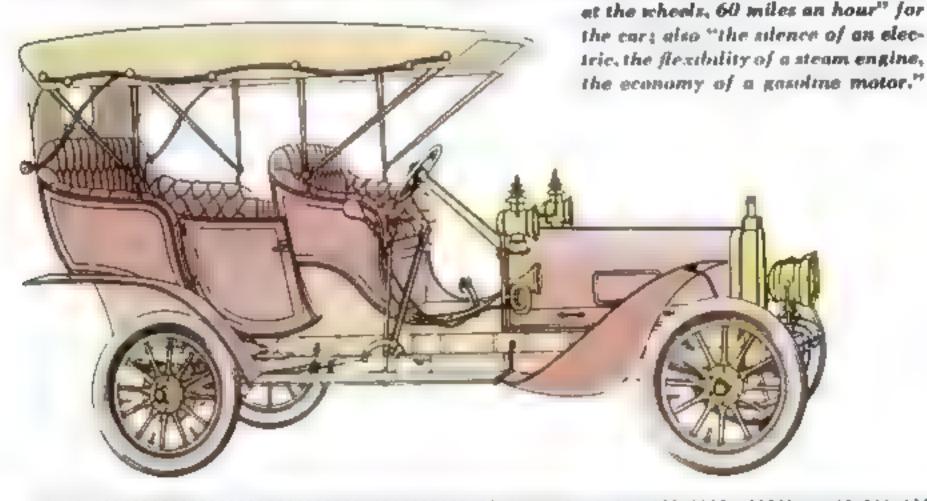

Audubon, wandering in search of birdlife, encountered such feathered eccentries as White-Eyed Flycatchers and Tell-Tale Godwits. Hornung, in his entertaining research, has happened upon the Auto Bug, the Izzer, the O-We-Go, the Static Super, the Ouick and the Zip.

Hornung's "collector's prints" have been exhibited in museums and libraries all over the U.S. Reproductions of his drawings decorate glassware, lacquered trays, coasters, Christmas cards—even silk scarves.

IDA POPULAR SCIENCE

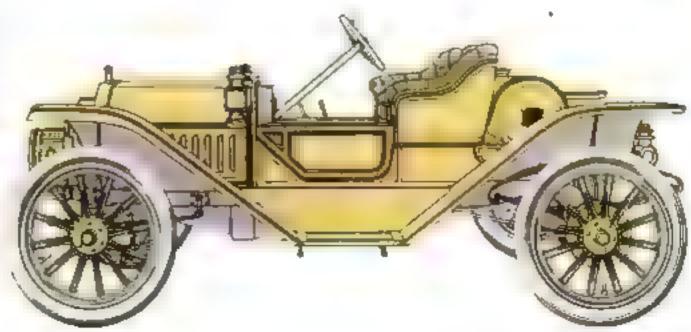

FORG made a try for the luxury market, in addition to the low-priced field, in 1906, when the company produced its six-cylinder Model "K" (below). Price of the car was \$2,500, later upped to \$2,800 (\$3,000 fully equipped). Ford's advertising claimed "40 horsepower

Buick brought out this "26" Roadster in 1911, when runabouts and roadsters, like concertibles today, were the last word in sportiness. The 2.100-pound "26," priced at \$1,050, was one of the most popular Buicks that year. It had a 35-horsepower, four-cylinder, valve-

in-head engine and a 100-inch wheelbase. A few Butch "26" road-sters, tenderly cared for by antique-car fans, are still running.

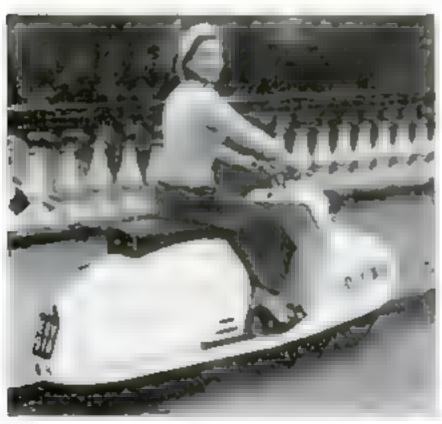

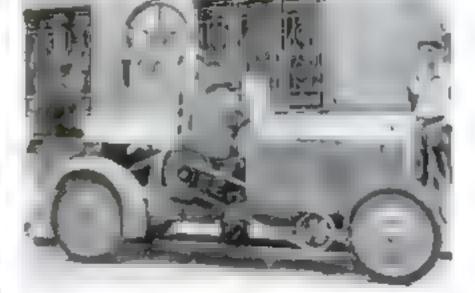

Swedish Research Plane Uses Unusual "Double-Delta" Wing

This underbelly shot of the Swedish Suab-210 gives you a good view of its odd 'double-delta" wing. Already put through 400 successful test flights, the research plane foreshadows the design of future Saab fight-

ers. Since the picture above was taken by Esso photographers, a new nose section has been fitted to squeeze more speed from the turbojet power plant—an Armstrong Siddeley Adder.

>>> Chipmunks get credit for planting 17,-000 trees an acre in the western pine area. They bury seeds, forget to dig them up.

British Make Plastic Scooter

The new British scooter above is made of laminated glass fiber. A telescoping hand lever starts the single-cylinder, two-stroke engine, and the driver shifts gears with his feet. The scooter can do 40 m.p.h. and travel 120 miles on a gallon of gas.

Carpentry Shop Rolls to Job

THE strange vehicle above is a mobile tool shop used by itinerant carpenters in Yugoslavia. As the men find work driving from door to door, they cut lumber on the spot with an elaborate system of gears and belts providing power for saws and drills.

Logs float into null that will turn them into plywood.

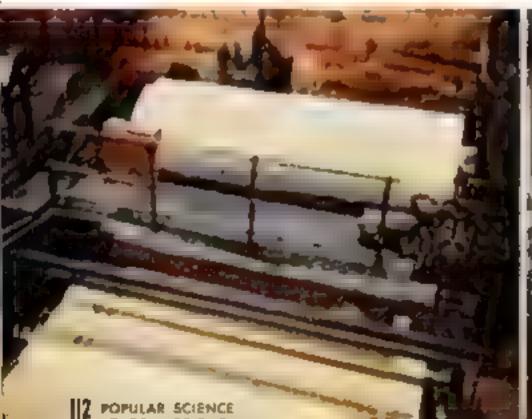

How Plywood Is Made

THERE probably isn't a home in the U.S. without plywood, either in the structure itself or in furniture. On the farm, plywood goes into silos, barns and hog houses. It goes to sea in ocean liners, small pleasure craft, tima clippers and tughoats. It rides the rails as new, light boxcars. These pictures, taken in one of the 85 factories of the Douglas Fir Plywood Assn, show how it's made.

1 BARK is quickly stripped from log as it is whicled at high speed against gearlike cutting head of grant lathe. Select fir logs, usually a thick three feet or more in diameter, come from the Cascade Mountains of Washington, Oregon and California.

2 BARK-STRIPPED LOG, called a peeler, goes to another big lathe that shaves off ribbons of wood from 1/10" to 3 16" thick. Three peelers like the one below, eight feet long and four feet in diameter, supply enough panels for a small plywood house.

3 SETTING THE MOISTURE out of the thin 3 strips of wood is next step. The wood ribbons travel through 100-foot-long ovens set at a temperature of 350 degrees. Here the strips are shown coming out after moisture has been reduced to less than four percent.

4 HERE IS THE SECRET of plywood's strength. Sheets of wood are assembled with the grain of each ply at right angles to the plies above and below. The lavers are then gloed together to form a panel that, pound for pound, is stronger than steel.

T HYDRAULIC HOT PRESS cures the adhesive to make panels in which the bonds hes tween plus are stronger than the wood itself. Inserted between accordion-like plates, the wood-and-glue sundwiches are subjected to simultaneous pressure and heat. END

Weird and Wonderful

DIG those beasts! And those home-brewed wagons with chromed jet-assist, or with magenta upholstery as tender as a baby. weight class, which is over two tons. George Cerny of Compton, Calif., filled in the hood to get cleaner lines and painted his car a coppery orange with a gold top. END

Electric-Eye Gun Helps Speed Military Planes to Landings

AN ELECTRIC-EYE gun is being used by the U. S. Air Force to help guide its jet airplanes to landings in thick weather. It's part of a brand-new system called Volscan. Old methods could line up planes with the runway for landings at the rate of only one each minute and a half. The new method will bring in and land a plane each half-minute.

Volscan has three parts—a conventional radar tracker to spot incoming planes (left above), a means of identifying each plane in which the "gun" (right above) is used, and an automatic computer which gives each plane a heading (direction to take)

and figures out a safe rate of descent. Here's how it works:

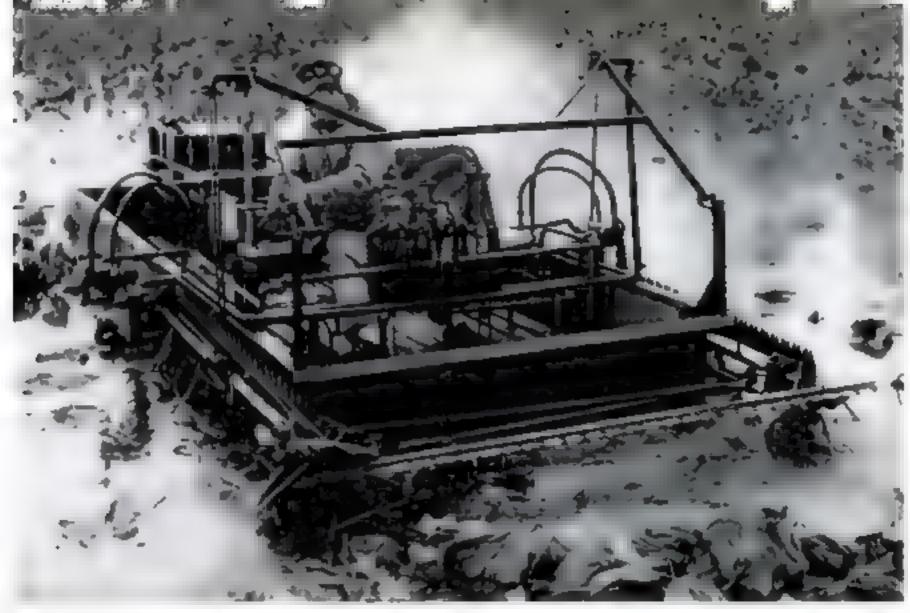

Radar produces blips, each representing a plane, on a screen in a landing-control office. When a blip appears, an operator "shoots" it with the gun. This throws a "gate" around the blip, isolating it from all the other blips. The heart of the system is the computer. It instantly digests information from the "gate" on the direction each plane is going, its altitude and speed. Then it spews out instructions on headings and rates of descent for each to follow to line up with the runway. This information is radioed to each pilot.

Rotating Wing Tips Give Plane Better Control at High Altitudes

A NEW idea for maintaining control of an airplane at high altitudes, where ailerons get less "grip" on the thin air, is under experiment in England, It's an oversize wing tip that rotates, providing more surface for

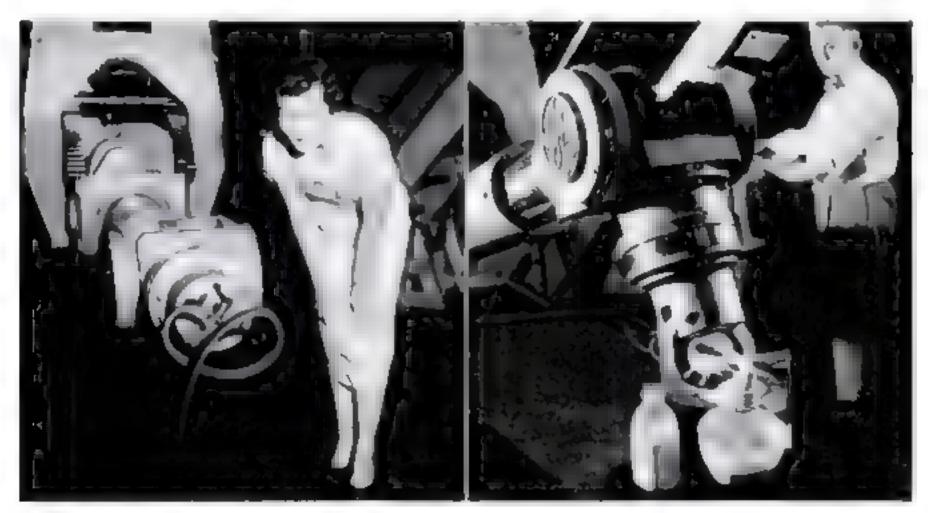

the air to bathe. The experimental plane shown here is a jet. It was built by Short Bros, and Harland. Called the Sherpa, it has a wing span of 38 feet and a sweepback of 43 degrees.

Jet-Propelled Weed Cutter Mows 20 Acres of Water a Day

PLANTS that choke fishing waters are cut down fast with this aquatic mower. A jet of water drives the steel hull at eight miles an hour, 1,150 gallons per minute being squirted to the rear by a centrifugal pump

driven by a Jeep motor. Cutting is done by a sickle knife that reaches vegetation as deep as six feet below the surface. Ohio's Division of Wild Life says the mower can clear 20 acres of water in a day.

O-Man Can Twist Steel, Mix a Cake—or Fix an Atomic Engine

A MECHANICAL arm with enough muscle to lift 7,000 pounds will substitute for human brawn and skill in "hot" atomic areas. Its steel fingers, powerful enough to twist an iron bar into a knot (left above), are so sensitive that they can deftly break an egg

and whip up a cake (right above). O-Man (for overhead manipulator) will work for GE on atomic engines, picking up, positioning and fastening heavy parts. It can saw, drill and tap holes, use power wrenches, hammers and riveters.

It would cost hundreds of millions, but wouldn't it be nice to commute on a rubber-cushioned roadbed?

By Henry B. Comstock

EVERY commuter has a dream. In it, he enjoys a leisurely breakfast, strolls to the station, sinks into the padded seat of a streamliner and—whoosh, he's off on a 10-minute run to the city.

Now a rapid-transit expert claims that money, planning, new trains and new tracks could make the dream come true. The same techniques, he says, could give back to the railroads a lot of lost passenger traffic.

The man with the plan is John A. Hastings, a former New York state senator. He bases it on a new roadhed and an improved car truck. He holds patents on both.

The roadbed would be prestressed concrete—either prefabricated or cast at the site. In cities, this roadbed would be laid underground; in suburban areas

KEY to 2½-mile-a-minute speeds and low maintenance costs, says Hastings, is a pre-fab, prestressed concrete roadway, with rails mounted on resilient rubber insets.

Havana is interested in John Hustings' new

the horizontal beams that hold the rails would be carried on vertical piers.

Hastings says his scheme would cost no more than building ordinary subways and railroads, and would result in Cheaper maintenance, since there would be no ballast or tie replacement,

the 1:05 Cauli Be a Thril

high-speed teausit plan and its by-product: welcome shade for Cuban window-shoppers.

mid regrading cests are chiminated
 Faster trains saide the stability of the fixed roadbed would minimize train sway and bumps

Hastings' improved car truck is adapted from one developed to give street cars a smooth ride and quick acceleration. He has added rubber mountings to increase resistance to side sway and vibration. Each truck mounts an electric motor, to be powered either by a third-rail or a diesel-driven generator in the locomotive. Hastings plans to use the trucks on lightweight, low-hung trains.

TOOLED OUT of bedrock 100 feet below mid-Manhattan, New Jersey and Long Island streets, eight subway stations would each be served by 28 high-speed passenger elevators—enough to whisk 20,000 commuters an hour to and from their coaches on the 8:05. Freight containers would descend on eight stilllarger lifts from motor vans on street to flatcars below.

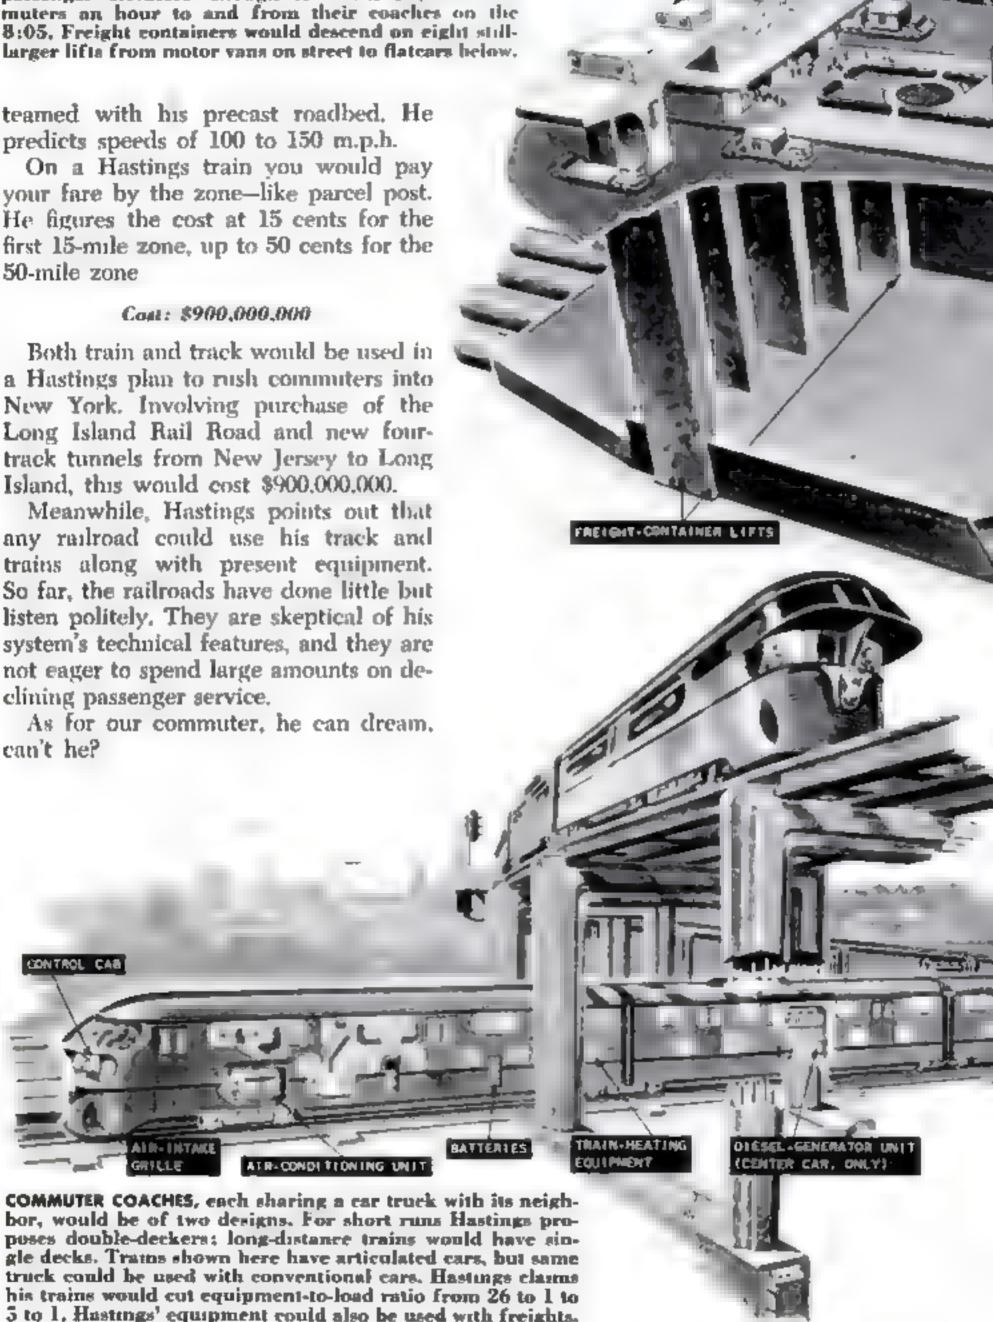

teamed with his precast roadbed. He predicts speeds of 100 to 150 m.p.h.

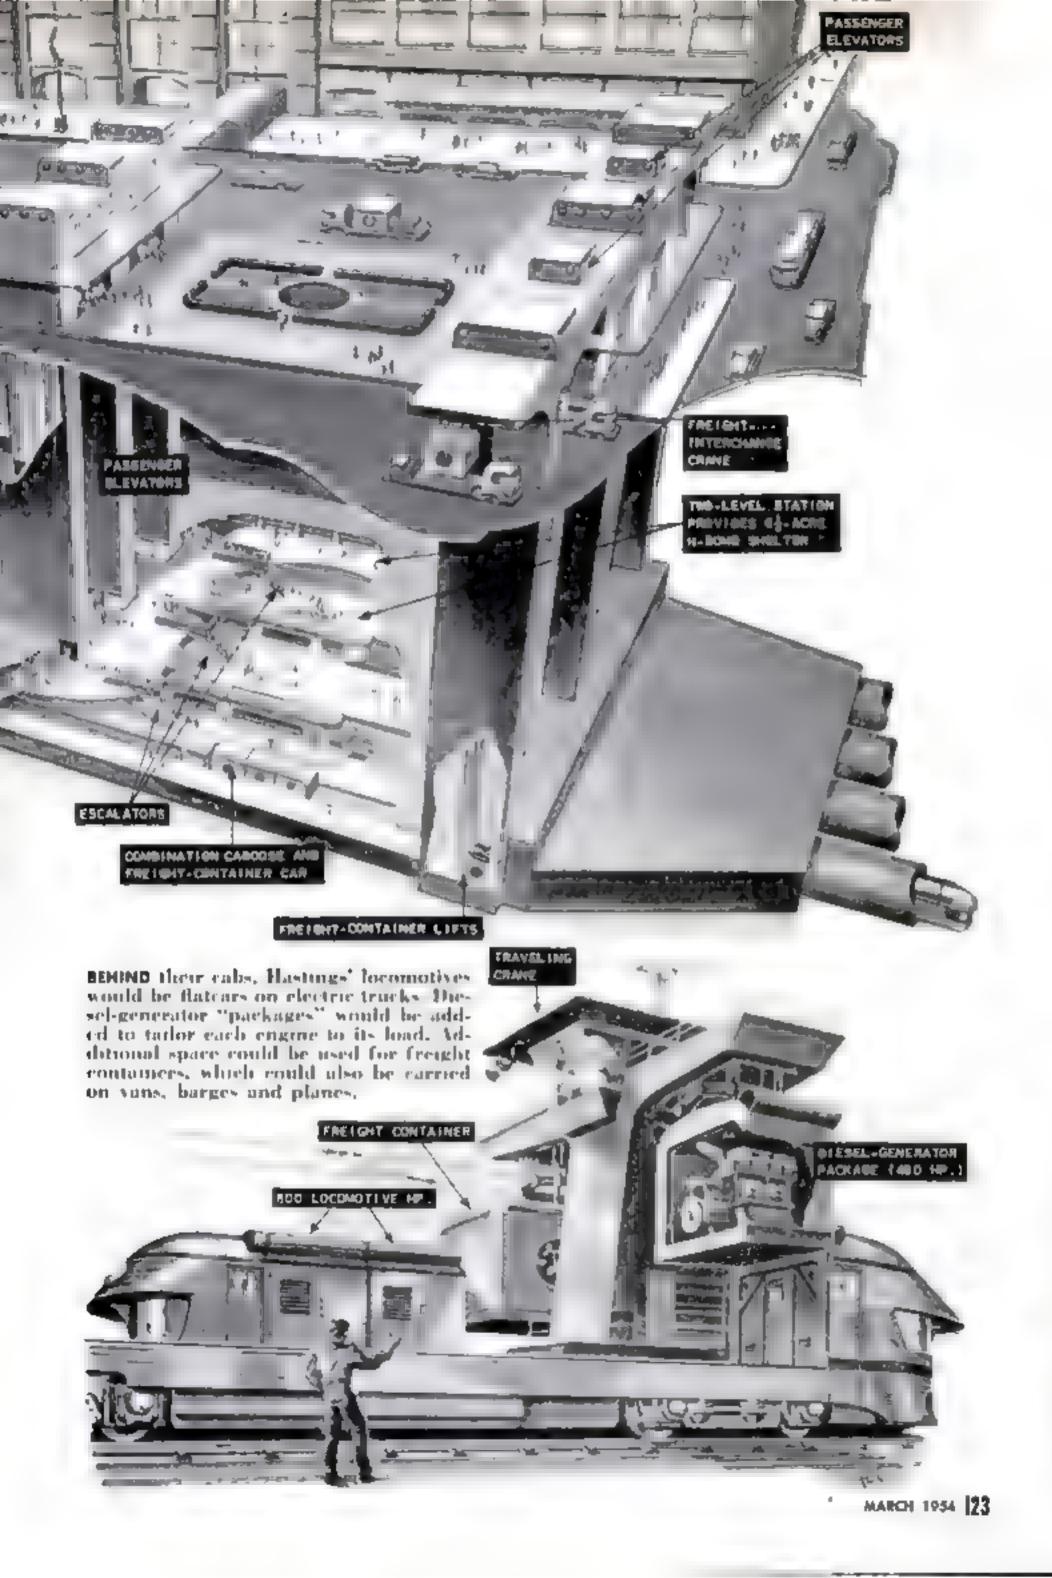

On a Hastings train you would pay your fare by the zone-like parcel post. He figures the cost at 15 cents for the first 15-mile zone, up to 50 cents for the 50-mile zone

Both train and track would be used in a Hastings plan to rush commuters into New York. Involving purchase of the Long Island Rail Road and new fourtrack tunnels from New Jersey to Long Island, this would cost \$900,000,000.

Meanwhile, Hastings points out that any railroad could use his track and trains along with present equipment. So far, the railroads have done little but listen politely. They are skeptical of his system's technical features, and they are not eager to spend large amounts on declining passenger service.

As for our commuter, he can dream,

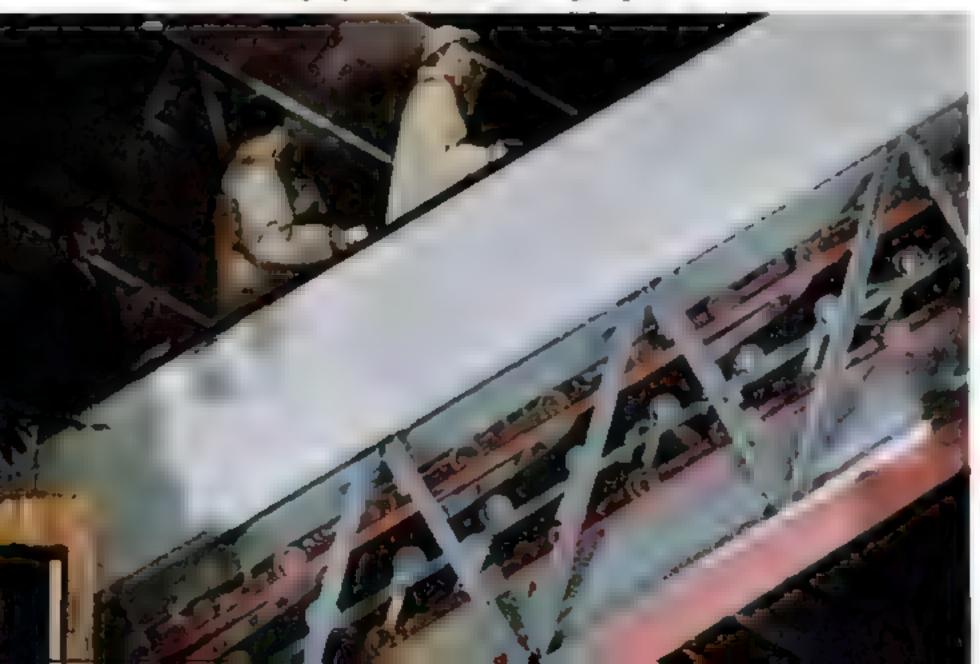

The chassis and 180-horsepower motor are by Packard. The super de hixe body and interior are by the Henney Motor

Push-button comforts, traffic control and resort spirit help banish blues at Los Angeles' Kaiser Foundation.

By Ronald M. Deutsch

WHEN the last happy tears were shed and the last flowers given, one of the visitors in Rita Schlanger's maternityward room asked the inevitable question: "Can we see the baby?"

Smiling shyly, Rita reached to the head of her bed and drew out a white steel drawer. There, in a clear plastic bassinet, lay her two-day-old son, Jay.

"Isn't it wonderful?" she said. "I can have him with me all the time."

The traditional sighs and cooings over, Rita simply closed the drawer. Young Jay slid back into his private, soundproof nursery and a light flashed in the corridor to warn the nurse that Baby was back in her charge. Rita touched a button and her bed slowly lifted her into a comfortable sitting position. "Honestly," she said, "it's just like living in a hotel,"

To prove her point, she leaned back and began to demonstrate enough gadgets to fill the cockpit of a Sabrejet.

Life Is Easier for Patients and Staff

The new, supermodern Kaiser Foundation Hospital in Los Angeles, in which Rita Schlanger lounged in maternal ease, is a model of every comfort and convenience that its designer, Dr. Sidney Garfield, could dream onto the planning boards.

"We're not trying to spoil our patients," said Maternity Floor Supervisor Zoe Barbara Brown. "Actually all these gadgets

Special hed tray serves also as vanity table, dinner table, writing desk or phone stand. Fun and games for the convalescents make the hospital's "hotel floors" especially theory.

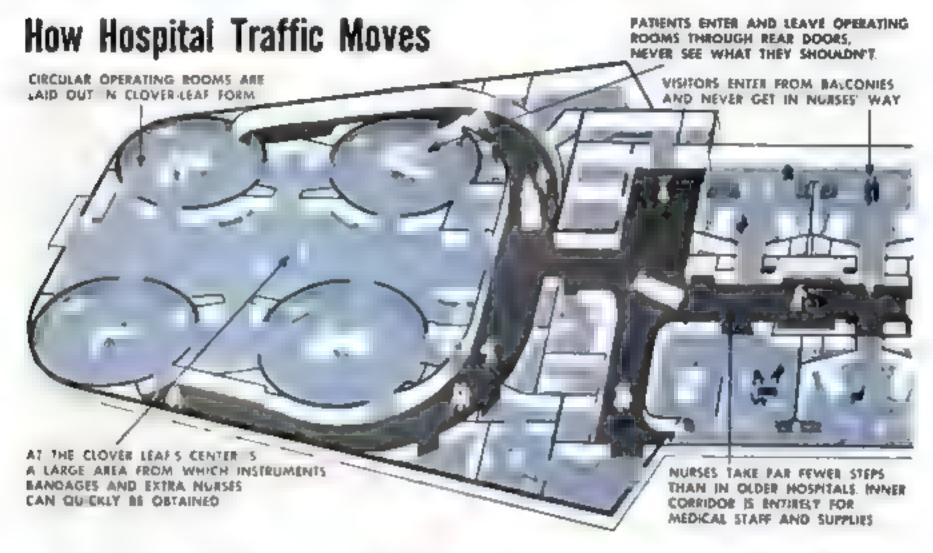

NERVE CENTER of each floor is the supervisor's desk, linked by intercom to individual nurses' stations. Dumbwaiters at the rear speed deliveries to and from supply room and lab.

help them take care of themselves. It's a funny thing, but the more we do to make life easy for the patients, the less work there is for the staff."

Each of the hospital's five lower floors has three corndors: a central working corridor reserved to the staff, and two balcony-like outside corridors used by visitors, Patients' rooms are entered by all but hospital personnel through plateglass doors that open onto the balcony.

TUNING IN A PROGRAM on the communal radio, a bed patient simply yanks a chain pull. She has a choice of three stations. Her earphone is the flat disk lying by her head.

This is a real boon," said Nurse Brown. "There's hardly any traffic at all in the working area, Visitors never interfere with hospital work, never see anything they shouldn't see, Patients are protected from noises, sights and odors that might be unpleasant."

Each nurse's station is a model of compact efficiency. She has her own intercom system, which connects her to the floor supervisor's desk and to all points in the hospital. By her desk are individual medicine cabinets for each patient, and the patients' charts are posted outside their rooms. She has a charge-a-plate system, like the ones used in department stores, to save her time in filling out forms.

At each station are central storage points for linens, bandages and drugs,

Sun Furnace Goes to Work

A man-made inferno tries out materials for jet and rocket engines—and shows one way to capture free solar power.

Ten-foot mirror of solar furnace concentrates sun's rays to yield heat of 8,500 degrees.

By Alden P. Armagnac

ATOP a 6,000-foot mountain near San Diego, Calif., they're harnessing the sun to help build airplanes.

A solar furnace newly installed there focuses the sun's rays, with a 10-foot-diameter mirror of polished aluminum, upon a spot smaller than a dime, It surpasses by far the temperature of the hot-test blowtorch or electric furnace.

Researchers of the Consolidated Vultee Aircraft Corporation apply the sun furnace's terrific heat to materials under trial for jet and rocket engines and for guided missiles. Aim of their experiments is to develop substances more resistant to heat and thermal shock than any yet known—stuff that won't soften and flow, say, when a long-range missile screams back to the earth from dizzy altitudes.

That the possibilities are promising is

Turning in gimbals ring, mirror follows sun. Observer takes temperature with a pyrometer.

FURNING-GLASS PRINCIPLE is applied by solar furnace. Its concave micror acts like a lens to focus sun's rays, as shown by using photo-flash reflector as a cigarette lighter.

SOME TEST SAMPLES of high-temperature materials are flaked or cracked (top row) by sun furnace's heat. Others melt (center row), yielding solidified droplets below them.

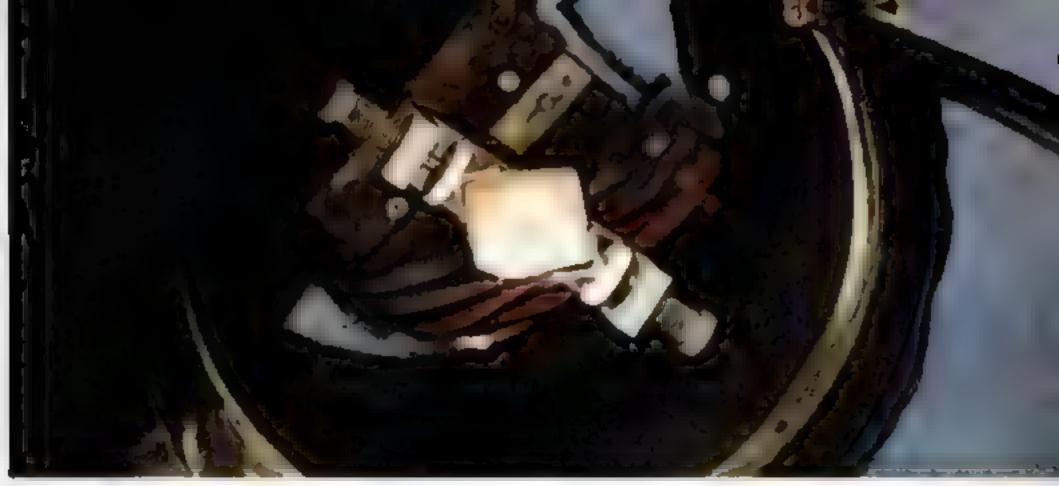

shown by recent discovery of two superrefractories, hafmum carbide and tantalum carbide, with fantastically high melting points—7.530 and 7.020 degrees F., respectively. The first looks like the record for any substance known, For comparison, iron melts at a mere 2.800 degrees, and tungsten tops the list of metals at 6.100 degrees; while graphite, long the supreme heat-resisting material, turns from solid into vapor at about 6.600 degrees.

The California experimenters' solar furnace, essentially an enormous burning glass, provides the most practicable way to explore this newly opening extremeligh-temperature realm. When sky conditions are ideal, it yields an estimated maximum of 8,500 degrees F. At the focus of the great mirror, this heat is concentrated in a spot 5/16 of an inch in diameter.

Metal Melts Like Butter on a Store

Its intensity burns a hole in firebrick with ease. Steel melts and drips like scaling wax over a flame, when a rod is held with its tip at the focal point. A movable cylindrical sunshade controls the temperature of thousands of degrees to within a degree or two, a triumph of precision. Equipped with an astronomical drive, the big mirror turns automatically to follow the sun, permitting experiments of hours' duration.

36 POPULAR SCIENCE

Metal jaws hold specimen-here, firebrick-at focus of mirror. The result is shown below.

Best of all, pure samples of materials can be subjected to the searing heat without contamination by foreign substances, like carbon in electric furnaces. And there are no electric and magnetic fields, nor fumes, to disturb reactions or lunder spectroscopic observation.

Science's Pioneers Led Way

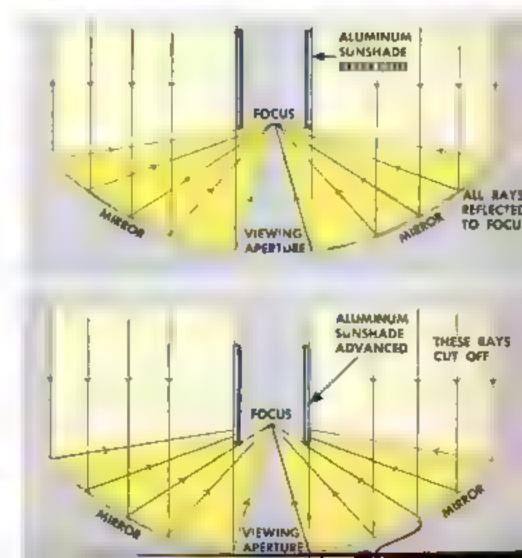

In going to work for industry, the solar furnace has exchanged academic robes for overalls. For its advantages long were appreciated only by savants of pure science. Lavoisier and other great chemists of the past melted metals with solar furnaces, which made up in size whatever their lenses or mirrors lacked in optical perfection. Then the idea seems to have been forgotten, until recent years.

Abroad, French experiments that began a few years ago with a 78-inch searchlight mirror (PSM, Aug. '50, p. 122) have now led to what is probably the world's largest solar furnace. Using a 40-foot-diameter composite mirror, a mosaic of small panes of window glass, this semi-industrial installation in the Pyrenees went into operation in 1952.

In this country, first practical use of a

exhibits model of his latest solar boiler. One of his earlier models (right) is shown driving a half-horsepower steam engine, mounted on a frame above three mirrors.

solar furnace appears to date back only a little earlier, to a little-known project of World War II. A 120-inch sun furnace was built for the AC Spark Plug Division of General Motors at Flint, Mich., with the cooperation of the Aluminum Company of America. Originally 16 reflecting sectors of quarter-inch sheet aluminum gave it a saucer-sized hot spot, of up to 2,000-degree temperature and five-inch diameter. After the war, when it became surplus, it was moved to Rockhurst College in Kansas City, Mo., and used in

scientific studies by its designer, Dr. Willi Conn. Having reshaped the mirror to obtain a smaller hot spot and much higher temperatures, he perfected the technique of controlling and measuring the extreme heat accurately.

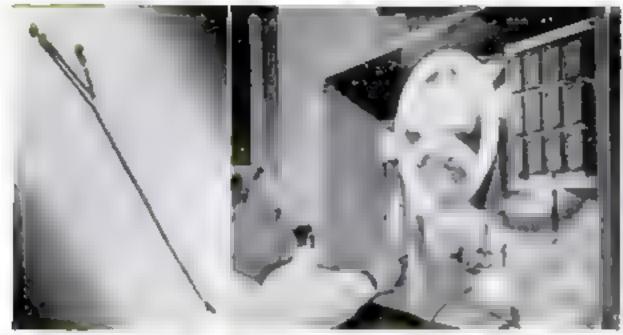

New Owner, Final Version.

This is the sun furnace that Consolidated Vultee has now purchased, modified further to suit its new tasks, and put to work, Incidentally, moving the furnace southward in latitude from Kansas City

ELECTRICAL ENERGY FROM SUNSHINE

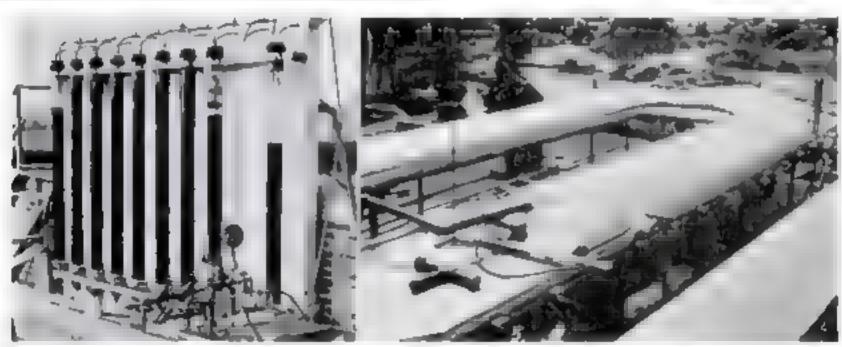

SUN MOTOR (renter above) shows sunshine could be converted into electricity by thermocouple (left) or photovoltate rell (right), Motor runs on current gen-

erated when sun, or a candle, heats thermocouples as in above illustration; or when a lamp, representing sunlight, is turned on photovoltaic cells.

CHEMICAL ENERGY FROM SUNSHINE

CHLORELLA ALGAE, thriving in water and salts under carbon dioxide, harness sunlight for food more effectively than farm crops. Yield could feed livestock, in roof-

top trial for Carnegie Institution, Arthur D. Little, Inc., of Cambridge, Mass., raised algae in six-foot columns (left above), then in a plastic tube (right).

to San Diego required a new mounting for the big mirror—it turns in its gimbals ring, like an astronomical telescope, on a "polar axis" parallel to that on which the earth turns.

To scientists looking into the future, solar furnaces illustrate just one of many ways to harness the sun. The tantalizing fact is that a full horsepower of solar energy, free for the taking, falls at midday on each square yard of the earth. What progress experimenters are making toward capturing it was recently re-

viewed by Dr. George R. Harrison, dean of the MIT School of Science.

India Has Solar Looker

Devices using the sun's heat directly, as the solar furnace does, represent the simplest approach and the most successful to date. India has perfected a solar cooker, which a government agency now sells for \$14, using a circular mirror of yard-square area. Solar stills on life rafts make drinking water from sea water.

MARCH 1954 133

Charlie Burke of Michigan has molded a million lures of plastic, and the silly fish still think they are real.

By Wesley S. Griswold

KNOW a man who has to go fishing every few days in order to stay in business

His name is Charles I. Burke, and he lives in Traverse City, Mich. He makes plastic nymphs, grubs, insects and tiny crustaceans that fish lose their heads over. In fact, he's made a million of them. But he keeps trying out new ideas on the fish.

His artificial lures even fool people. The other day, one of the town's practical jokers, chatting on a street corner with a friend, stealthily reached into a pocket for one of Burke's grasshoppers and unobtrusively flipped it onto the sidewalk. His friend saw the bright-green plastic insect apparently hop into view,

and instinctively stamped solidly on it.

"Hey!" yelled the jokester, in mock indignation. "What's the idea of bending my hook?"

"Hook?" said the victim, lifting a heavy foot off the grasshopper and staring down in disbelief. "Well, I'll be-"

Many trout and bass have made a similar mistake.

He Wasn't Enjoying Life

Burke, who has been a devoted fisherman ever since he was old enough to wet a line, started making plastic lures in the basement of his Detroit home in the fall of 1949. He was then 36 and a research chemist for a large firm that makes plastic products for automobiles. He was being paid an adequate salary but he wasn't enjoying life. He was suffering

from nervous tension a few persistent respiratory aikments and an inability ever to find time to go fishing

A few days earlier in the mest of tackling an assignment to produce soft waterproof plastic work gloves, one of his helpers, who was also a cottle sustic angler, had made a casual remark that changed the course of Burke's life

"You know." the man had said, "I'll bet somebody could make artificial lures out of this stuff."

A Pickled May Fly for a Model

The idea appealed to Burke at once, and the longer he considered it, the more excited he grew. Finally, one evening on the way home, he bought an inexpensive metal-engraving set, a small plate of scrap aluminum and a modest amount of powdered polyvinyl chloride and went to work.

Using a pickled May-fly nymph for a model, Burke etched 10 reverse copies of it in the aluminum plate. He had never

had a day's training in art, but the copies locked had

The then mixed a plustic brew and poured it into the half-molds. For heating the first trial batches, he used an infrared lamp and guessed at the proper leagth of time to a corner.

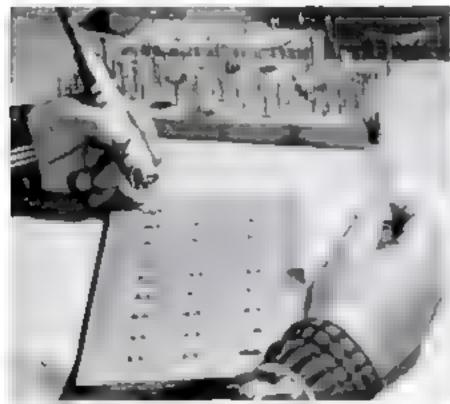

When at last he had int upon the

BURKE'S LURES arrayed on a dainty hand look so real that you can almost see Hiem crawl.

How Burke's Fish Lures Are Made

SOUTHPAW ETCHER copies a cricket, preserved in alcohol. Burke here demonstrates his method for making half-molds in aluminum plates of items that fish consider delectable.

inserting the hooks in a plate of spider molds, already filled with liquid plastic. The hooks are laid on their backs in the tail and body excities of the molds.

APPLYING THE HEAT to a hatch of plactic insects. They cook on an electric plate at 350 degrees for from five to 15 minutes, depending on what's couking. Photo timer is at right.

A SATCH OF SPIDERS comes off the hot plate, where their foam-plastic bodies rise like hiscuits. The non-foam legs are made to dangle while the lighter bodies float realistically.

right curing time, he used a photographic timer to measure it exactly, and bought a waffle iron to replace the infrared lamp. The waffle iron was equipped with plates for toasting sandwiches. On these plates Burke set his aluminum molds for curing.

That first winter, selling mostly to fishermen friends, Burke marketed \$1,440 worth of lures. He had already copied several other members of the insect kingdom to keep his May-fly nymph company, and had even etched a rather remarkable crayfish.

In 1950, two events occurred that converted Burke's lucrative hobby into what rapidly became a highly profitable business. The first was a visit to his doctor.

"Charlie," said the medico, "you've just got to get out of Detroit. This climate will kill you."

"Where'll I go?" Burke asked.

"Well," the doctor replied, "why not Traverse City? That's one of the healthlest places in Michigan,"

Traverse City had other charms for

[Continued on page 256]

A new insect repellent called M-1960 is applied to cottons or woolens during laundering or dry cleaning. It contains benzyl benzoate and is said to keep away mites, fleas, ticks, leeches and mosquitoes. But all present production goes to the government.

Trout Swim in "Hot" Water

What happens to the fish when river water is used to cool giant reactors that turn out nuclear fuel? To find out, scientists keep an aquarium at the plutonium plant on the Columbia River at Hanford, Wash. In tanks beneath a radiation warning, the fish swim in the radioactive river water and feed on hot isotopes mixed with liver. Continuous studies in the plant's aquatic biology laboratory have shown that the radioactivity levels are so low that they are not harmful to fish or man.

Hulf an atomic sub, its stern towards the door, is here "under way" in a man-made ocean.

Future Atomic Fleet Emerges from Desert

In a sand-flat test cell in Idaho was born the nuclear engine that may revolutionize all navies.

A HUNK of submarine hull in a big tank of water on a sandy plain in southeastern Idaho may well have been the most important "ship" ever built. In it, beginning early in 1951, the world's first atomic marine engine was assembled and tested. A near-duplicate of that engine powers the revolutionary new U. S. submarine, Nautilus, which was launched in January.

The fastest, deepest-diving sub ever known, the *Nautilus* can travel submerged around the world without refueling.

These awesome qualities, as one con-

gressman said, may soon make the high seas unsafe for any surface vessel. They inspired Admiral Robert B. Carney. Chief of Naval Operations, to predict a future atomic fleet, all ships of which would be faster, more versatile and reliable, and cheaper to run than any ever floated before

None of this might be possible if it had not been for the tense, dedicated work that went on for more than two years in the windowless Idaho building whose doors are opened for you on these pages

Here without any textbooks or rules or previous experience to guide them

Navy and Westinghouse engineers and AEC physicists put together an entirely new type of propulsion plant—consisting of an atomic reactor, a heat exchanger and a steam turbine—and proved that it would work.

Under the zealous command of Rear Admiral Hyman G. Rickover, these men did a fiendishly complicated job in a most awkward way in order to save an estimated two years. Instead of being allowed to spread the hundreds of unfamiliar parts over a square block of floor space, and then tailoring the proven plant to fit a submarine, they were forced to do the whole task inside a steel tube less than 30 feet in diameter. Furthermore, instructions on how to proceed came from practice sessions in an exact-scale wooden mock-up 2,500 miles away. In addition, these hardy pioneers

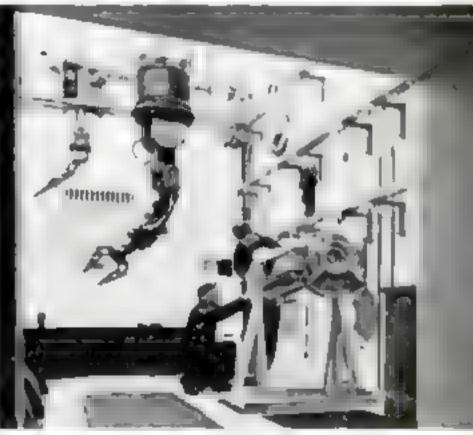

A KIND OF PANDORA'S BOX, from which fight-

A KIND OF PANDORA'S BOX, from which fighting ships of the future will spring, is the eight-story, windowless plant where the landbased prototype of the Nautitus was born.

worked with a rare metal, zirconium, that could not be welded in open air without bursting into flame, and with radioactivity that was potentially fatal to them all.

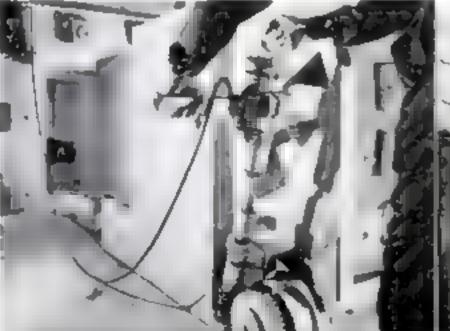

THIS PERISCOPE enables a man "handling" radioactive materials to see what he is doing.

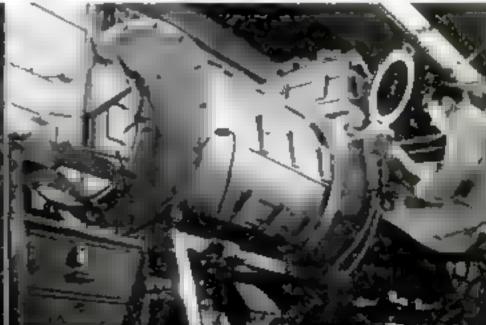

MECHANICAL HANDS, to be moved by remote control, await jobs in the plant's "hot cell."

welding gare zirconium for the sub's reactor had to be done in this giant vacuum tank,

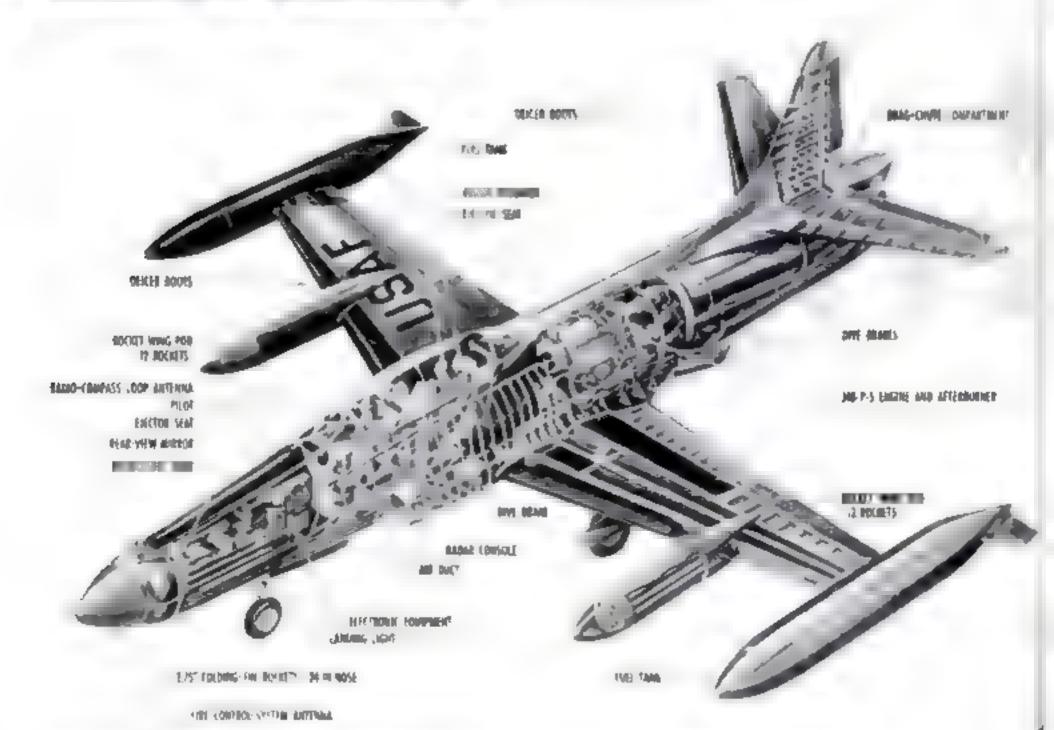

Whacks on Head Test Helmet

SLEDGE-HAMMER blows are dealt this man by a 13-pound pendulum to find out how much protection a helmet gives a pilot or football player. Instruments measure force of the blows. Result: better-built helmets.

Freezing Frees Rubber Pads

Paying loose rubber tension pads, glued to the skin of airplanes for test purposes, used to tear the pads to bits. Now Convair engineers remove them easily after covering them with dry ice for a few minutes.

Starfire Packed with Electronic Brains and Rocket Brawn

What it takes to put a top jet interceptor in the air and get its rockets away for a kill is shown in this cutaway view of the Lockheed F-94C Starfire. The more than 1.200 pounds of electronic equipment that crowds the forward half of the plane makes it all but automatic. At over 800 miles an hour, the Air Force's all-weather jet can find and knock down an aerial target its two-man crew may never see.

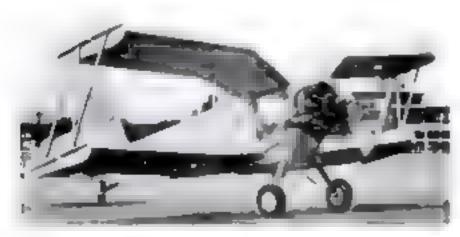

Hundred-Pound Jet Copter to Lift Four Times Its Weight

This experimental helicopter, the Mid-jet, will fit in the average bome garage with room to spare. Two blade-tip rampet engines will speed it along at 80 miles an hour, says the Bensen Aircraft Corp., Raleigh-Durham

Airport, N.C., who developed the machine primarily for military use. The engines, weighing only five pounds each, have no moving parts and run on ordinary gasoline or fuel oil.

Bail-Out Seat Rides the Rails

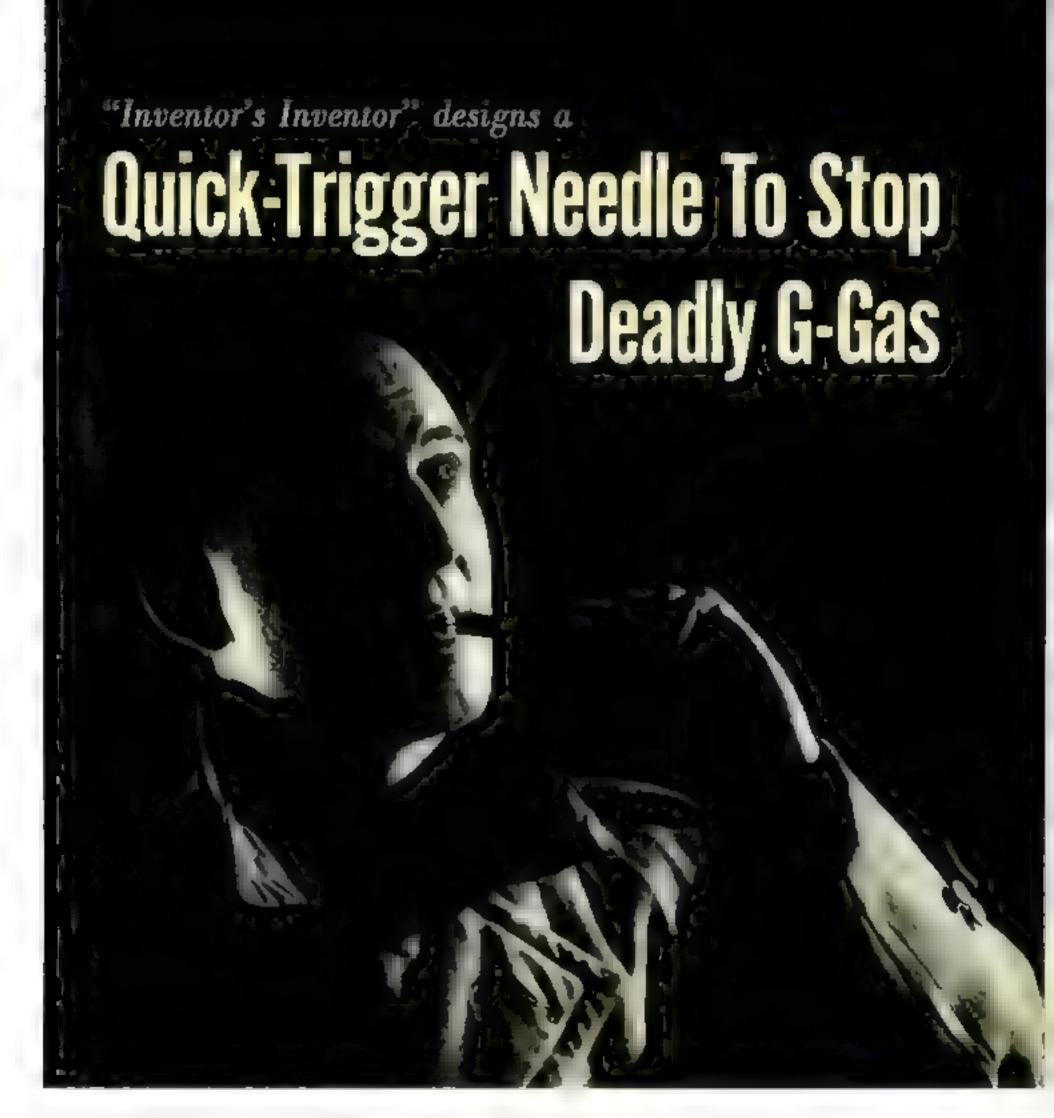

TELESCOPING guide rails steer this automatic-ejection scat (right) out of the cockpit, insuring that the pilot is tossed over the plane and clear of its tail surfaces when he bails out at high jet speeds. The device was developed by Lockheed for use with the F-94 Starfire interceptor.

Plane Built for Crop Dusting

Designed to give the farmer more crop dusting per flight, the stubby-winged Air Tractor biplane above is shown as it taxis for take-off on its first test hop at Yakima, Wash. According to the Central-Lamson Corp., the new agricultural plane can carry a ton of spraying materials.

It took Yankee ingenuity—and a week's stay in a hospital—to perfect a defense against this dread horror weapon.

By Martin Mann

THE Potter Aeronautical Co., which makes airplane parts but not airplanes, is the last place you would expect to find the defense against one of the newest and most dreadful of war weapons, nerve gas. It now has some 80 employees, crowded into a dingy old building on a narrow side street in New-

ark. N. J. Its quarters are so cramped that a light breeze might blow chips from the lathes into the bookkeeper's ledger.

Yet from such a modest plant has come the development that can prevent the slaughter of a nerve-gas attack.

This G-gas is more deadly than A- or H-bombs, many experts believe. Odorless, cheap and easy to produce, it causes total paralysis and death within one minute after it is inhaled. There is an antidote: the common drug atropine. But it must be injected into the bloodstream after exposure and before that 60-second safety period is up.

Doctors and nurses would be helpless. The only answer is an easy-to-use, foolproof hypodermic that everyone could carry with him ready to give himself a shot the instant of an attack. This is what Potter has helped to make.

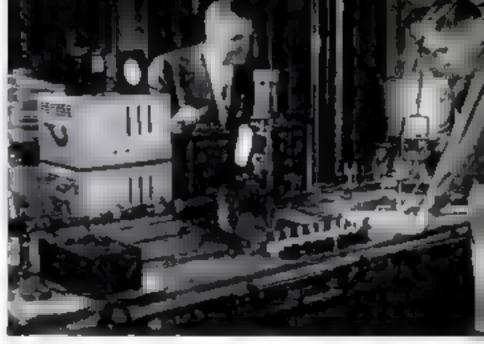

Potter's injector looks like a fountain pen. You pull out the safety knob at one end (with your teeth if necessary) and press the other end against your thigh. That's all. The injector does the rest. An ingenious mechanism automatically jabs the needle through clothing and skin, then releases the lifesaving atropine. You barely feel it.

From Airpiene Parts to Hypos

How come a medical item like the injector was perfected by an outfit specializing in airplane parts? In a curious way, it was perfectly natural.

The Potter company, which is now moving from its unpretentious Newark home into the magnificent new plant pictured on the next page, has been an important part of the arsenal of democracy since 1939. Its real business is invention, mostly parts and instruments for airplanes. The inventor is David M.

PUL THE SAFETY is first step in using automatic injector to protect against nerve gas. Psn, which prevents accidental firing, can be pulled with teeth if arm is injured.

AIRPLANE AND ROCKET parts are the Potter company's bread-and-butter; medical inventions are only a side line. David Potter (center above) watches flow-meter calibration.

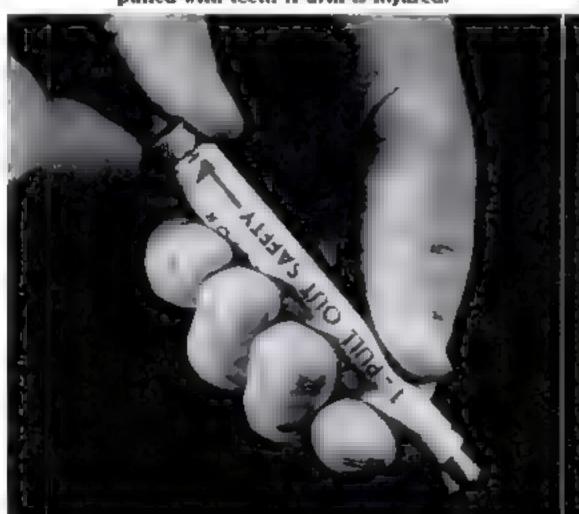

Potter, a mechanical and aeronautical engineer (University of Michigan) with a quiet air, graying hair, sharp eyes and two Lincoln Continentals (no car crank, he just happens to like the way they ride).

Potter served his apprenticeship with Northrop and the Navy's Bureau of Aeronautics, then struck out for himself with a new idea for measuring fuel flow.

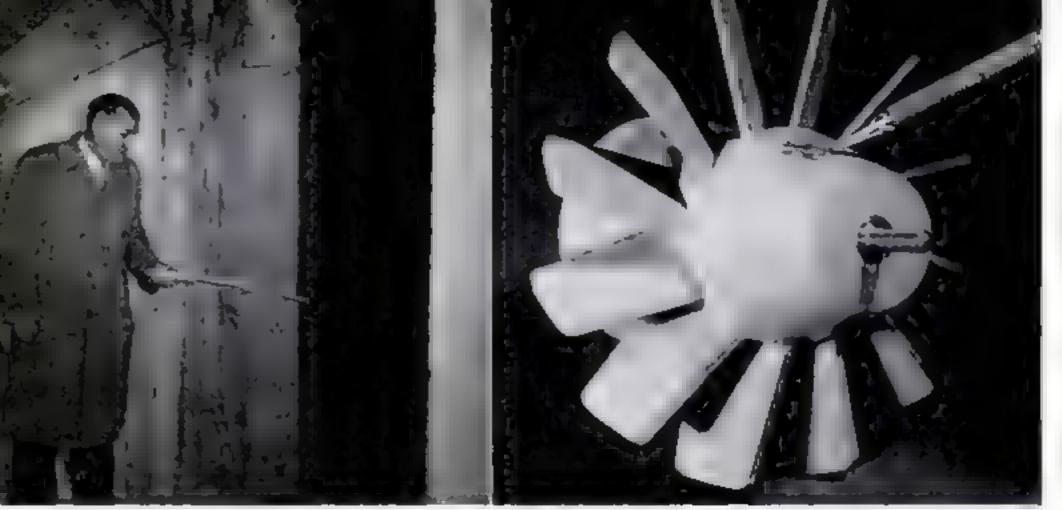

His success story puts a new twist on the basement-workshop-to-manufacturing-tycoon fable. The workshop was a friend's. It seems the friend had a brandnew lathe and an equally brand-new baby. Potter baby-sat while he used the lathe to turn out the first few models of his flow meter.

The flow meter was a success. It is

PUSH THE INJECTOR—preferably against thight—to shoot needle into body and release life-saving antidote, atropine. Injector can work right through heavy winter clothing.

SECURITY isn't overlooked in the design of the new plant Potter is now moving into. Concrete visits protect hombproof underground storeroom. Passage (rear) is bomb shelter.

now used in U. S. jets and rockets, forms the mainstay of the Potter company's business, and enables Potter to support his Continentals in comfort

Its reputation eventually reached Dr. Stauley J. Sarnoff, Associate Professor of Physiology at the Harvard School of Public Health and a leading expert on blood circulation. Dr. Sarnoff wanted to measure the flow of blood and he came to Potter for help. Potter made him a small flow meter that could be sewed up inside a dog.

Dr. Sarnoff later became involved with G-gas, specifically with the automatic-injector problem. He and his wife Charlotte spent two years designing 30 models. None worked too well,

Late one day last year, Dr. Sarnoff dropped in at the Potter headquarters. "I noticed how tired and discouraged he looked," Potter reminisces, "so I asked him, 'What's the matter, Doc?' "

MODERN, GLASS-WALLED plant in country setting is indication of inventor Potter's versaPOTTER GOT HIS START by inventing flow meter. Large turbine above measures fuel flow in rocket, while tray one resting on it is similar to meter designed to gauge flow of blood.

Dr. Samoff explained that he had spent a frustrating day trying to interest people in a difficult, vitally important problem. Then, knowing that Potter and his associates were cleared for classified information, he told them something of the still-secret G-gas and outlined the injector problem.

Secretary to the Rescue

"We were all impressed," Potter says. "They were getting 40 percent rejections on their injectors. That means an attack could kill 40 people out of every hundred. But when the Doc suddenly asked us to work on one, Hirsch—the business brains of our outfit—broke in. 'Throw the Doc out,' Hirsch said. 'Every time we do a job for him we lose money.'

"Well, that's true. But we had a secretary then, name of Kathleen Ruch, she was a sort of company conscience. I

tility. He designed buildings and supervised construction, serving as his own contractor.

Tail of "Hot" Suit Serves as Entrance

A TECRNICIAN puts on this plastic protective suit by crawling into it through its fut "tail," which is connected to a port in the door. Used in radioactive areas at the Hanford plutonium factory, it stays inflated because air pressure inside the "hot" room is lower than pressure outside. This prevents any radioactive dust from leaking outside the room.

Trolleys Get Music

Pull on the strap in a Milan trolley car and you hear music. There's a tiny radio loud-speaker above the lady's hand. It is connected to a receiver near the driver's seat. Presumably you can let go when it's time for the commercial.

Refrigerator on Wall Insulated by Vacuum

You may be able to buy a no-stoop refrigerator like the one at right by next fall. It has vacuum insulation—10 times more efficient than insulation now used—in back, bottom and doors. This helps make it only two-thirds the size of GE's conventional 10-cubic-foot models. Estimated price: \$800 to \$900

Magnetic Clutch Challenges

Lightning-fast and sensitive, this exciting new drive runs on a handful of powder. But it feels like an oily hydraulic.

By Frank Rowsome Jr.

TT SEEMED like a common or garden Ford sedan, The plastic shift quadrant above the wheel did look umisual, as though it had been handmade by a machinist. (It had.) Otherwise, the car appeared to be as stock as a Ford can get.

Appearances, though, were dead wrong. Under the floor was an exciting new transmission, entirely different from the intricate hydraulic boxes that are abroad these days. It used two new magnetic-powder clutches-simple but remarkably able devices that may revolutionize U.S. automatic transmissions.

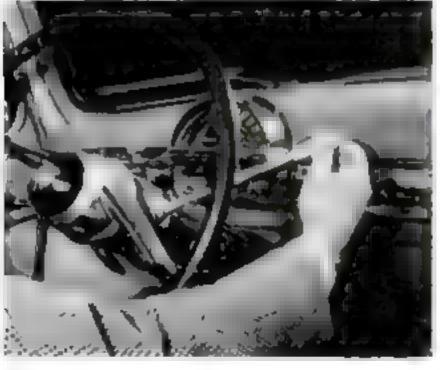

None of the internal wonders were evident when, a few weeks back, I was in-

vited to be the first magazine writer to try out this long-rumored new drive. With the engine idling, I pulled the selector lever to D3. Howard Findley, research engineer for Eaton Manufacturing Company, the big auto-component maker that is developing the new drive, explamed that D₂ meant the transmission would run from low through second to high

"If you put it in D2," Findley said, "you go straight from low to high. This is a standard three-speed box-or was until we reworked it and threw out a lot of

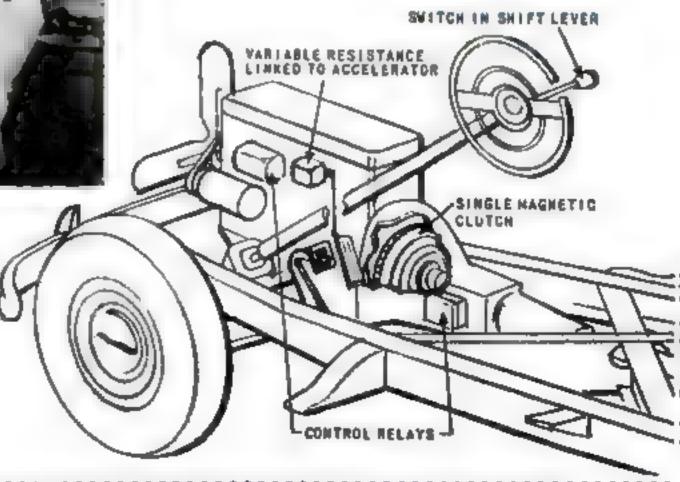

the original parts."

Not creepy. Right away you notice one difference. When you put an ordinary automatic in Drive, there is a subterranean ka-chung to tell you the plumbing is ready, and a kind of false eagerness in the box, otherwise known

"POOR MAN'S AUTOMATIC" is what Eaton engineers call this experimental Job in a Nash. It is really a semiautomatic drive, using one magnetic clutch ahead of a stundard gearbox. Touching shift lever disconnects clutch instantly; pressing gus pedal engages it gently. You can't stall engine even by starting up in high, for clutch eases up if a stall threatens.

How it works:

Automatic Transmissions

as creep. This Eaton job has no such tricks; in D_2 or D_3 at idle it is completely passive.

There was no clutch pedal. When I touched the gas, we got going quick and easy. The best way to describe take-off is to say it's like that produced by an expert driver in a manual-shift car that he knows well—no mush and no jerk.

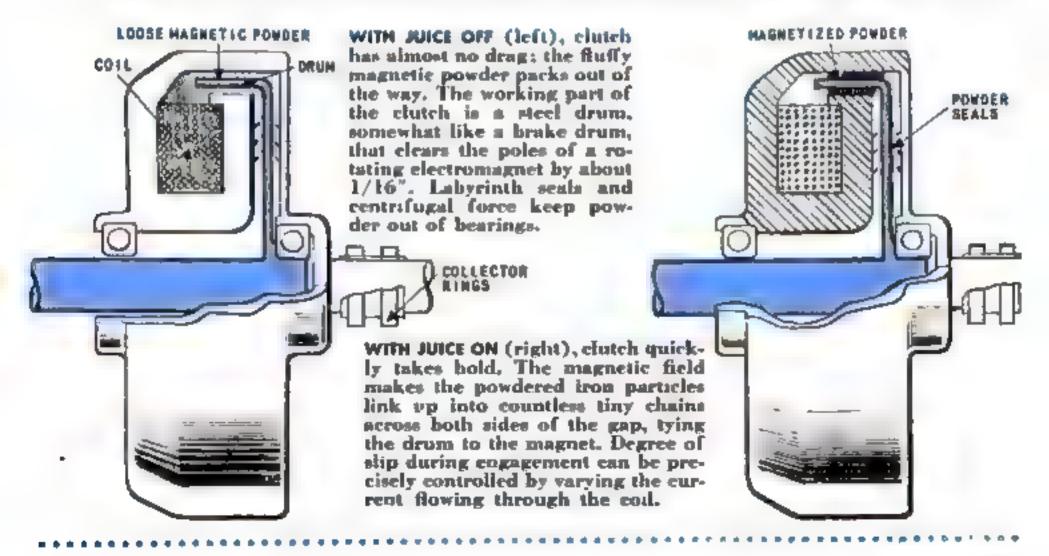

I tried it at different throttle openings, and each time it was as though there was a talented midget under the floor who was skillfully working a friction clutch. At a few hundred revs above idle he eased the clutch in gradually; with more gas he cut down on slip time; if you tromped, he worked fast, just short of a jerk. There was a conspicuous lack of that syrupy, all-in-good-time way that most automatics get rolling.

Secret shifts. The upshifts, too, were impressive. I'd be accelerating at eight or 10 miles an hour in low, when I'd suddenly discover I was really in second. Presently the same sleight-of-hand would occur and prosto—we'd be in high. I

could spot the shifts only by the difference in revs, after the shift had taken place. There was no internal hiccup in the box, and no discontinuity in torque that I could feel.

On the highway, this automatic gave the impression, lacking with many of the others, that the engine had a close, friendly relationship with the drive shaft. There was none of that formal meeting in swallow-tailed red coats for a polite discussion of what ratio seemed appropriate for the occasion. When you hit the gas, the engine hit the wheels; when you backed off, the engine dragged.

No convulsion. The only time it wasn't entirely smooth was when I floorboarded it at around 25, kicking down from high to second. This produced a mild but perceptible hesitation; it takes a little slice of time for an engine to rev up to match a new ratio. The kickdown did not, however, even approach the theatrical convulsion that some automatics display on a high-torque downshift. And when you drifted up to a red light with your foot

POWDER, sprinkled on a card over a magnet, shows the field pattern. The amount needed in a clutch would just about fill a whisky shot glass. It feels like slightly gritty taleum,

THIS COIL masters the torque of a car engine. It is made up of No. 13 enameled copper wire, and draws about three amperes in avverage use. Its insulation is heat-resistant.

off the gas, there was a blessed absence of those down-the-scale spasms with which some automatics come to rest.

How come? The way Eaton gets this almost magical performance, without the intervention of hydraulies, is by mating a conventional gearbox with two magnetic-powder clutches. They are not the old, current-hungry electric clutches that have long been used in industry. They are, instead, the grandchildren of the magnetic-fluid clutches that were invented by Jacob Rabinow of the U.S. Bureau of Standards (PSM, June '48, p. 83).

Rabinow's clutch used two mechanically separate members with a mixture of powdered iron in oil between them. If current were passed through an electromagnet, the liquid would "freeze" solid, locking the two members together,

It was, and is, an excellent chitch—smooth, very fast, and with a highly controllable slip period. It had what an electronics man would call "high amplification": a little input energy could control a lot of output. The clutches found immediate use in calculators, instruments and intricate military control systems.

But when a magnetic-fluid clutch handled car-sized power, trouble developed. An intense heat was generated in the oil during the brief period of slip—an automotive clutch may have to dissipate 50 horsepower or more for a moment or two—and these jolts of high heat would

break down the oil. The fine particles of iron would act like catalysts, and the oil would oxidize into a worthless gunk.

Eaton research men tried every conceivable liquid in a futile search for some vehicle to carry the working iron particles. Then they found that there was no need for a liquid after all—that a handful of powdered iron would work fine by itself. Small amounts of dry additives were found to improve performance—dry hibricants like graphite, steatite or chalk, and other additives to prevent sintering or clumping under high temperature.

The result is an efficient, practically indestructible magnetic substance. It can run red-hot—heated by particle friction during continuous slipping, hot enough to blue the steel clutch parts—without losing its magnetic usefulness.

The clutch this powder works in is amazingly simple. Brushes and slip rings feed juice to the magnetizing coil. Surprisingly little current is needed: about seven amperes will lock the clutch against maximum engine torque, and an ampere or two will lock it against moderate throttle. The sole servicing that Eaton foresees is replacement of the brushes after a few years' use.

What it will do. The simplest application, in a car's power train, is in place of the regular pedal-operated friction clutch. Then, with the addition of a few electric controls, a three-speed gearbox

Juice to the clutch is fed in part by a variable resistance linked to the accelerator. As you press the gas pedal, the clutch gets an increasing current; it picks up the load and away you go.

But of course a sliding-gear transmission can't readily be shifted unless you break the torque flow for a moment to take the strain off the gears. That's no problem. You just build a switch into the gearshift lever, rigging it so that when-

ever you supply light pressure on the lever, the clutch instantly disconnects. Touch the lever and the clutch disengages; let go and the clutch holds.

It isn't hard to rig this single clutch into a sweet-handling semiautomatic. A circuit can be arranged so that the car won't free-wheel if you take your foot off the gas. An "economizer" circuit can be devised to feed the clutch just enough juice to lock it for the torque the engine is delivering at any particular moment. It can be rigged to let you start up in high without stalling the engine. (A wire from the generator armature tells the control circuit how fast the engine is running; if the load on starting up in high threatens to stall it, the clutch auto-

DRUM at the top is the working part of the clutch. Note the three powder-scaling rings at the side. Above, the assembled clutch; the hand is touching holder for electric brushes.

matically eases a trifle. So the clutch—which can't wear out—just slips until the car is rolling, and then locks up.)

Full automatics. Magnetic clutches lend themselves to ingenious transmission tricks. The experimental car I drove had a full automatic made by joining two clutches, a three-speed gearbox and a shifting servo. Here's how it worked:

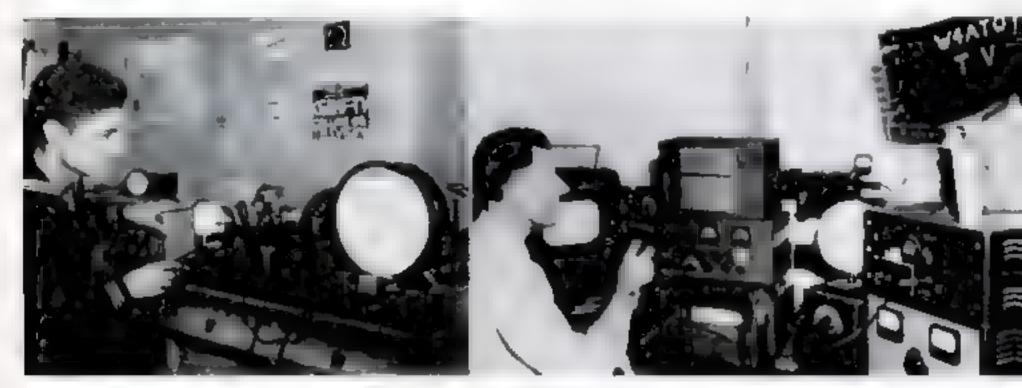

One clutch, energized through the accelerator control, was connected to low gear. It got you rolling. When time for the low-to-second shift occurred, it traded places in the wink of an eye with the second clutch, which was connected to high gear. This took the strain off the gears, permitting the servo to make

Radio-Controlled Tractor Loads Faster with Less Legwork

When the operator of the string of warebouse tracks above wants to move them forward, backward or around a corner, he does it by radio—without going near the tractor, The remote-control unit is under his hand, Fing on his belt. He can control the unit trom any distance within his range of vision. When the Barrett Power Ox is fully loaded, he mounts and operates it with the usual controls

Hams Now See as Well as Talk on Amateur Television

Television couldn't scare off the amateurs for long. Among the in inviting now transmitting pictures along with their voices are Scaman Walt Hornung, K68HF-TV, of San Diego, eleft, above and John C. Davis, W4ATO-TV, of Albany, Ga., Their telecasts.

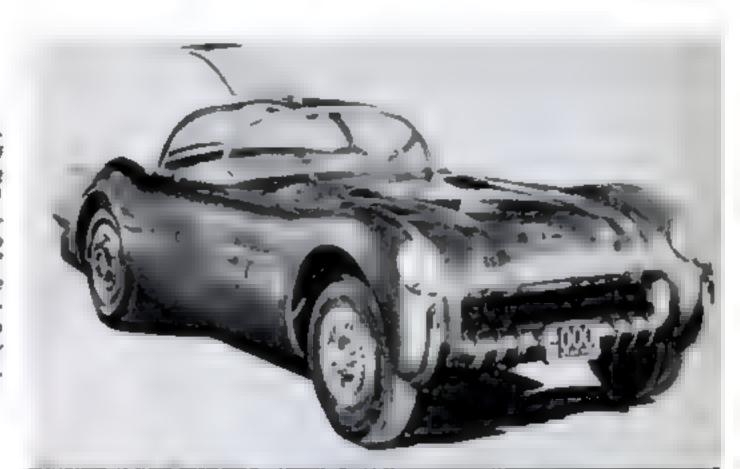

are in the 420 to 450 megacycle amateur brequencies, which can be picked up by ordinary TV sets equipped with slightly altered ultrahigh frequency converters. Hortung uses surplus radar gear. Davis' camera is a modified three-pich oscilloscope.

Detroit's Latest Plastic Fantasies

Built to be seen but not sold, they are the banners in front of this year's automotive circuses.

BONNEVILLE SPECIAL

Built for speed, this Pontrac' racer has knock-off hub caps and safety belt for driver. It is one of 11 reinforced-plastic cars pictured on this and the two following pages. Stylists' pipe dreams, they were socked into form largely for exhibition at auto shows. You couldn't buy one for a million dollars. They are not for sale.

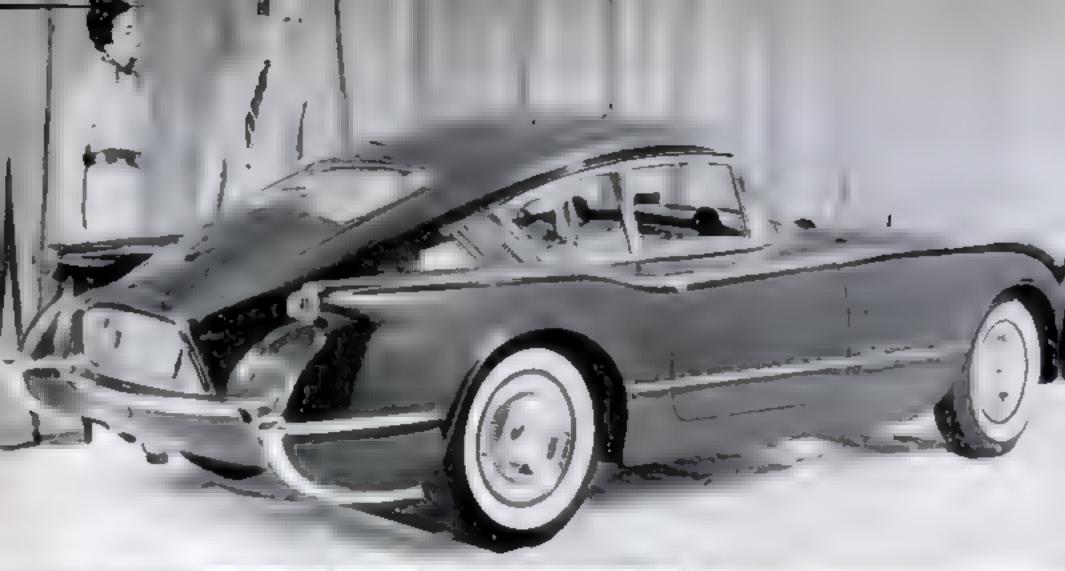

CADILLAC EL CAMINO

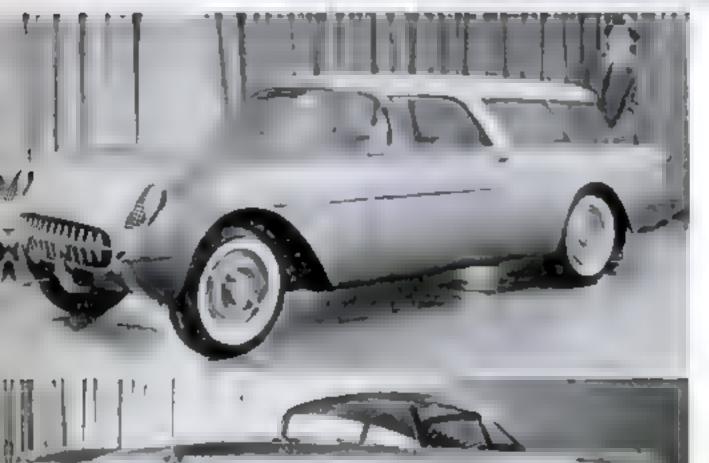

An extra pair of headlights on this two-passenger hard-top automatically turns off when car is in traffic. Featuring Caddy's 230-hp, engine, the 200"-long coupe carries its spare wheel below the trunk.

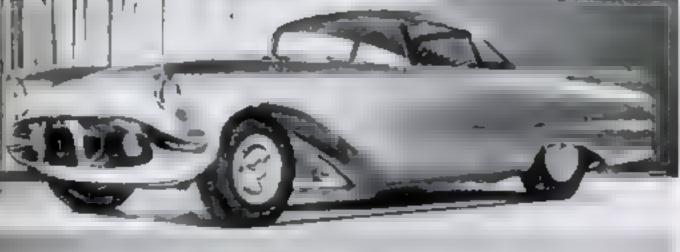

Described as first our ever built on conventional chasses with one-piece, all-plastic body, Granada even has bumpers, structural body members and body-attaching brackets of glass fibers. Car is 211" long.

MARCH 1954 153

CHEVROLET CORVAIR

A variation on Corvette introduced last year by GM, this Cherry has a sloping "fast back." It's powered by 150-hp. engine. Car is only 51" high.

CORVETTE NOMAD

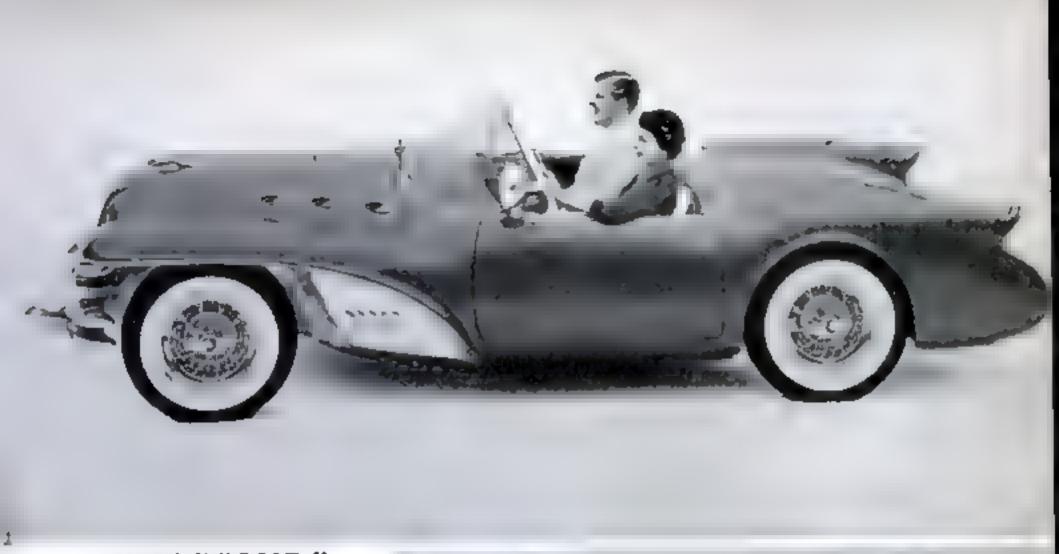

Only description that applies here is a sports-car station wagon, it contains two seats, holds six people. Most notable feature is unusual amount of glass area

OLDS CUTLASS

Most powerful plastic varis this 250-hp, V-8 Olds, It's also one of the fanciest, with radiophone, pixoting seats, louvered rear scindow. Hood scoops supply fresh air for heating system. Height: 511...

NEW "CONVERTIBLE"

It is and it isn't. The plastic top unlocks and lifts off this Chevry Corvette if you want to ride in the open. This probably is the only sports car ever built that retains its pleasing lines with the top on.

BUICK WILDCAT II

Progeny of last year's Wildcat, this is the smallest Buick ever built — 171" long and 48" high with the top up. Front fenders look the Stutz Bearcat's.

CADILLAC PARK AVE.

The stylists pulled their punches here. Car is conservative. Door handles are shaped like airfoils, wheels are aluminum alloy. Inside term is of soft gray leather.

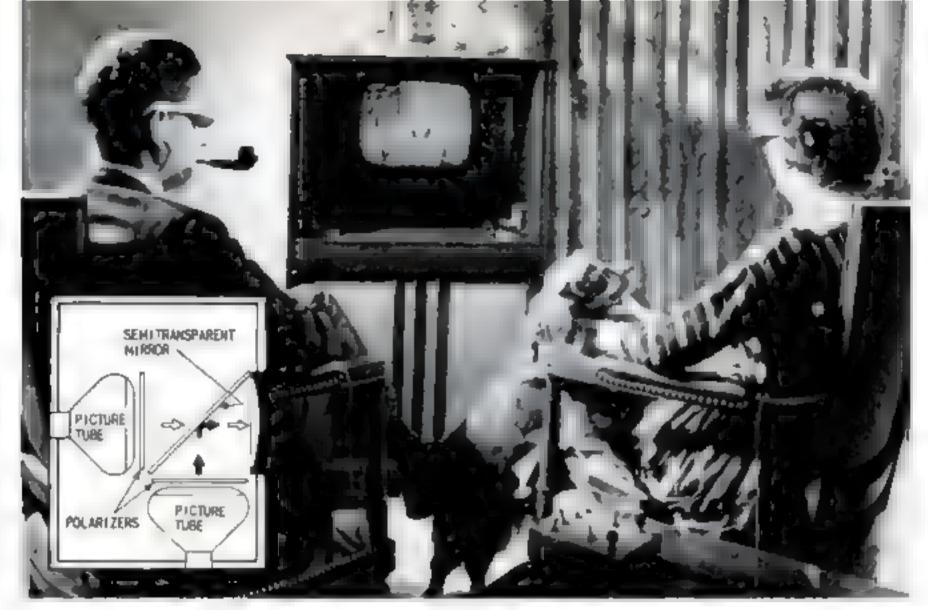

PLYMOUTH BELMONT

Not to be outdone. Plymouth exhibits a plastic car with a height to top of door of only 32%". Length is 1915,". Seats are white leather. Radio controls are on center armrest. Instruments include a tach

OLDSMOBILE F-88

Steering post on this job is almost horizontal, making steering wheel almost straight up-and-down. Radio speaker is recessed in seat between passengers. It indshield vents supplement coul ventilators

Two-Headed TV Set Displays Two Different Shows at Once

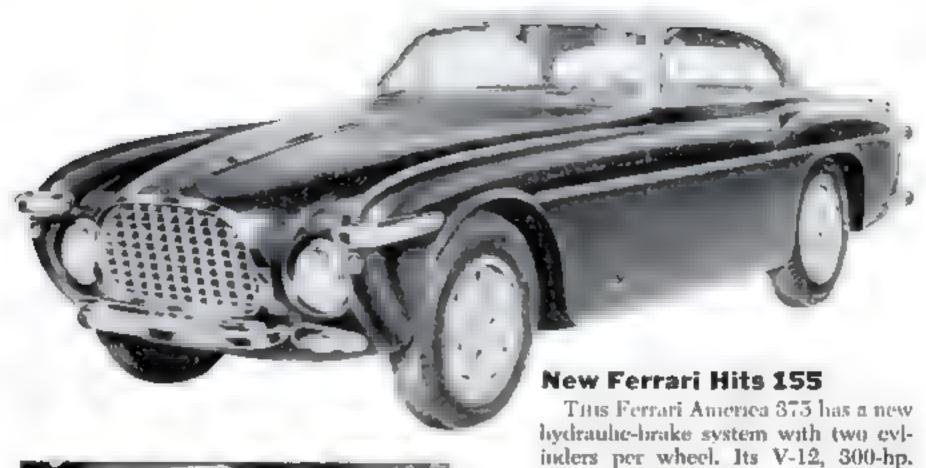

Two people can enjoy different TV programs at the same time with a new set. The experimental Du Mont Duoscopic is actually two receivers in one cabinet, with two chassis, two sets of controls and two viewing

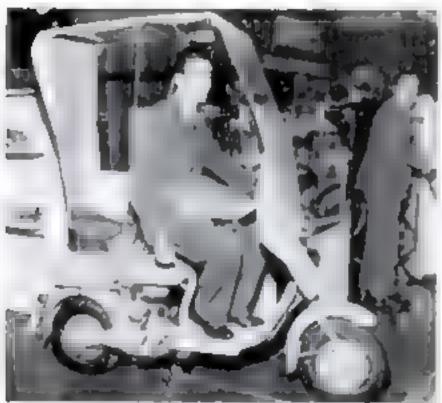

tubes mounted at right angles (inset). A semitransparent mirror superimposes the two pictures, but each viewer sees only one show by watching through polarizing spectacles. Earphones handle the sound.

Airport Wind Sock Goes to Work in Railroad Switch Yard

This wind sock may look out of place in a railroad yard, but it's there for a purpose. Towermen (center background) study its angle when they roll freight cars down the "hump" into classification tracks, near Kansas City, Mo., for proper coupling. Wind affects the speed of free-rolling cars, and the sock tells the Santa Fe Railway men how much grab is needed from the track retarders to slow them down. The retarders —compressed-air external brakes—can be seen along the tracks at left center.

Canopy Converts a Scooter

This canopy to protect scooter jockeys from bad weather was exhibited at a car and motorcycle show in Milan, Italy. When not in use, it folds up small enough to fit into the bag on the rider's lap.

Smoking Keeps Driver Awako

motor with three carburctors, dual igintion and twin fuel pumps pushes it

THE man at right is holding a German invention designed to keep drivers from falling as leep at the wheel. A eigarette holder wired to the dashboard, it sounds an alarm as soon as it is dropped from the mouth.

Argentine Car le Plastic

ABGENTINA'S first stock cars—a convertible (below) and a sedan—will be sold only in South America. Both have 60-horsepower four-cylinder engines. A top speed of more than 90 m.p.h. is claimed for the plastic sports car.

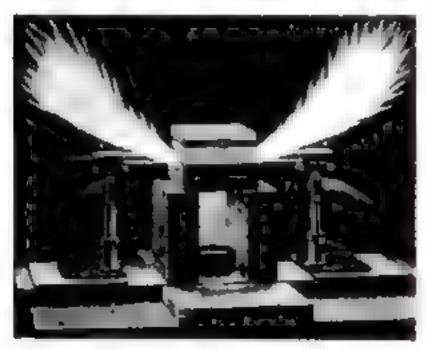

Within the last decade and a half, a new industrial revolution has been brought about by

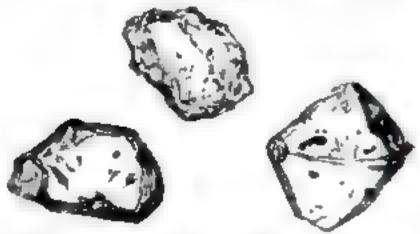

Seeking Diamonds, Chemist Optained Tungsten Carbide

PIONEER in producing tungaten carbide was French chemist and synthetic-diamond maker Henri Moissan. Picture of him in lab is from La Natura magazine of 1890.

WITH ELECTRIC FURNACES like this one, in historic experiments, he made microscopic dumonds; and tungsten carbide, too.

HIS TINY DIAMONDS, shown 50 times actual size, made the big news—but time was to prove tungsten earbide more valuable.

158 POPULAR SCIENCE

By Richard Match

ONE single development of recent years has multiplied man's return for his labor more than any other innovation since James Watt invented power-driven machinery 200 years ago. Metallurgists have simply put "cemented carbide" cutting tips and wear surfaces on the machine tools and dies that cut. drill, stamp and shape metal parts in our factories. Hardest of all metals made by man, the carbides slice through iron and steel like a knife through cheese.

The results have been spectacular. Today, three auto workers with carbidetipped tools can machine 48 engine blocks an hour; in 1941 the same job would have required 48 men. Now one man can turn out nearly 50 crankshafts an hour compared with 11 under the old methods. In U. S. arsenals a man shapes twice as many gun barrels per shift as be could before Pearl Harbor. produces four times as much armor plate. In other U. S. factories, carbide tools are turning out at an unprecedented rate a torrent of toasters, airliners, stoves, tractors, golf clubs, lipstick cases-anything made of metal.

Car Cost Would Climb Without Carbida

Automobile executives estimate that without carbide tools the 1954 car would cost about double what it does now. Why? Because carbide tools outlast tools made of the toughest high-speed steel by as much as 100 to one. They cut metal five or six times faster, stay sharp 10 to 20 times longer, and save 65 percent of the man-hours once expended in metal cutting. Carbides are the metals primarily responsible for high-speed mass production as we know it in the middle of the twentieth century. More-

Metals Made by Man

These 24 tungsten-carbide pieces for tools and muchines illustrate variety of shapes and uses.

over, we are just on the threshold of their use. Further advances promise to boost American productivity beyond anything known today.

Carbide tools have already made the jet age possible. No other known metal is hard enough to cut the so-called superalloys—from which high-temperature jet parts are made—at production-line speeds. General Electric, for example, is the nation's largest manufacturer of jet engines. "If we were to produce jet engines at our current rates, and do this without the aid of carbide

"we would need to expand our present production facilities five times. That means five times the number of factories and machines, five times the labor force. And the nation would be footing the bill in extra taxes."

Carbides slice through iron and steel without hesitation, but they contain neither iron nor steel themselves. They are instead chemical unions of carbon with one or more metals like tungsten. By the only half-understood magic of chemistry, the wedding of carbon with almost

How They Make Carbide Tool Tips

any metal begets a "carbide" immensely harder than either parent alone. The tungsten-and-carbon alloy which started the whole thing has had a curious history

In 1896 a French chemist named Henri Moissan happened onto a report about Devil's Canyon, Anzona. Some prelustoric meteor had plowed into the desert there, gouged a crater a mile across, and left behind meteorite fragments peppered with tiny diamonds. Scientists suggested that the heat and pressure of the molten meteoritic iron had made these diamonds from embedded charcoal specks. It was logical, Moissan reasoned. After all, diamond and charcoal are related forms of the same common Jekyll-and-Hyde element, carbon.

Moissan asked himself a question. If he could simulate meteoritic conditions in his laboratory, could he manufacture

diamonds?

Man-Made Diamonds Are Too Small

In an electric furnace of his own design, he built the hottest fire man had made up to that time, inserted chunks of iron and lumps of sugar burnt to charcoal. While sparks hissed and leaped around the laboratory, he withdrew the fiery mass, plunged it into a cooling bath, and waited expectantly. like some alchemist of old. It worked!

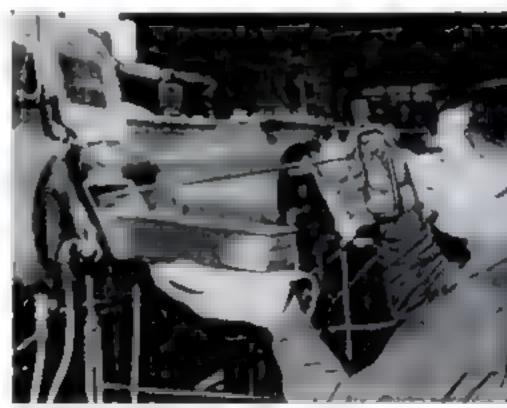

But there was a catch. Moissan's biggest diamond was smaller than a pinhead and worthless commercially.

Disappointed, Moissan tried heating carbon with other elements, among them tungsten, which had the highest melting point of any pure metal—6,100 degrees Fahrenheit. This time the experiment produced dull pebble-sized particles—not diamonds, but a new chemical compound nearly as hard: tungsten carbide. Moissan threw them aside, baffled again.

The Frenchman's numerous other chemical discoveries earned him a Nobel Prize 10 years later, and he died

**MIXER like household kind holds blended ingredsents, lampblack and pulverized metals of face-powder fineness, at Harrison, N.J., plant of Adamas Carbide Corporation.

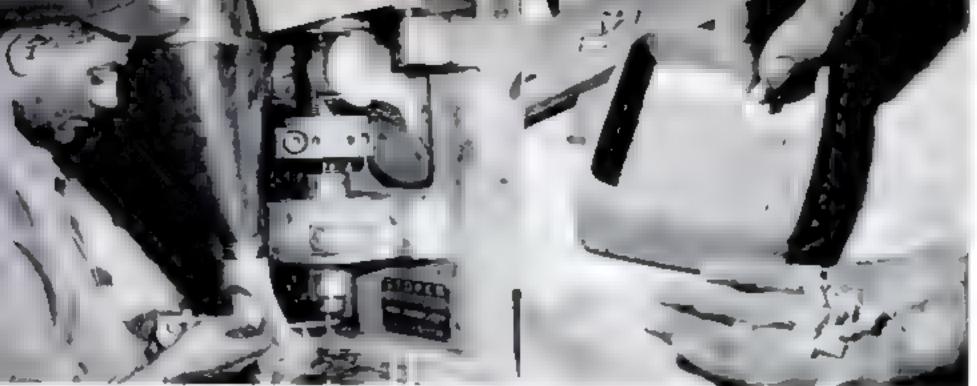

4 TRANSFORMED into superhard tungsten 4 carbide, past cutting or shaping except with such implements as dismond tools, sintered tablets come out of furnace.

soon after, never suspecting the importance of his strange metallic pebbles,

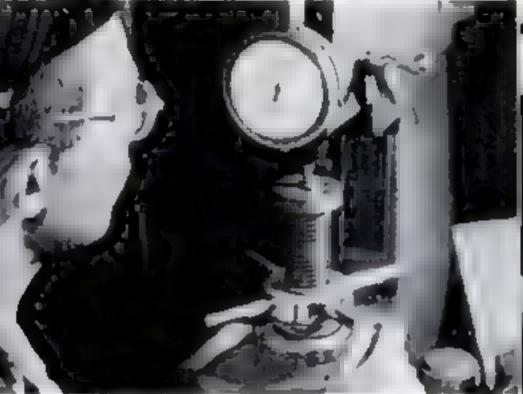

Then, during World War I, Krupp scientists tried to synthesize a substitute for badly needed industrial diamonds by Moissan's method. They failed. But they noted the Frenchman's observations about the "useless" by-product—tungsten carbide. They discovered that they could crush these hard particles to powder, then cement them together chemically with softer cobalt to form a tremendously hard alloy. But there were difficulties in shaping it that brought the price to a prohibitive \$453 a pound.

General Electric acquired American rights in 1928, and during the lean depression years American metallurgists

2 PRESS squeezes mixture of metalic powder into tablets—small blocks that are hard enough to be handled, but soft enough to be easy to bring to desired shape by grinding.

3 fablers are placed in receptacle, above, for baking in furnace whose heat will fuse bonding material of the mixture—a process known to metallurgists as sintering.

5 HARDNESS TESTER of Rockwell type confirms that product meets specifications. In hardness, tungsten carbide outranks every natural substance but diamonds.

6 FINAL INSPECTION completes making of thingsten-carbide cutting tips, does and wear parts, Inserted in cutting tools, carbide tips will slice easily through steel.

ironed out many of the bugs in the German product. They cut production costs, learned how to fasten tiny inexpensive carbide cutting tips onto ordinary steel holders, finally hurdled the major weakness of the German supermetal: the Krupps' pure tungsten-carbide tools could slit iron at dizzy speeds, but friction against steel quickly ruined them; by adding pinches of "slippery" tantalum and titanium to the tungsten-carbide base, the Americans lessened the friction.

It Starts as a Powder

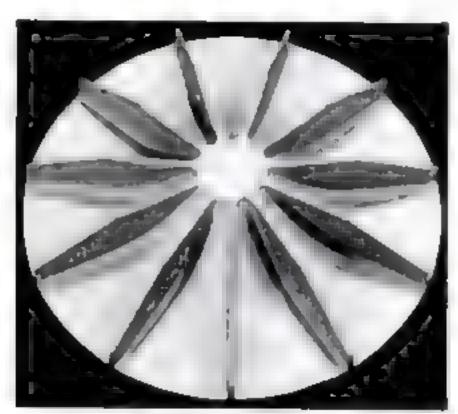

Today the price of tungsten carbide is one-twentieth the original price, and cemented carbides can be made in al-

most any size or shape. Pulverized metals the consistency of face powder are fed into the beginning of the production line; the hardest metals made by man are shipped from the other end.

In the Adamas Carbide Corporation's Harrison, N. J., plant, I saw metallurgists blend lampblack with tungsten and cobalt powders so fine that there are trillions of grains in each pound. Power presses—grant cookie stampers with a force of 30 tons per square inch—rammed the powder into shapes soft and crumbly as aspirin tablets. In the final step the metal cookies were baked in big ovens until the cobalt "cement" melted and hardened around the particles of tungsten carbide. When they emerge from

into artechalock of 14-inch Army gun, upended in concrete, go angredients for titanium carbide. Explosion of powder charge applies pressure of many tons to square inch.

TURBINE IMPELLER for jet engine uses titanium carbide, made as above by Kennametal Inc. of Latrobe, Pa. Material has been baked after "explosive pressing" in breechblock of gun.

the ovens the once-crumbly shapes are so hard that even when reheated to a cherry-red 1,200 degrees by the torrid friction of high-speed metal cutting, they remain on the job, hard and keen, harder than the hardest steel is at room temperature.

The product goes into household articles, and other familiar ones, as well as industrial tools. Better lawn-mower sharpeners, better paint-scrapers and glass-cutters, faster-drilling dental burrs—which generate less heat and consequently less pain—are a few of the every-

day conveniences made available by the invention. I have one of the new knife-sharpeners in my kitchen—two tiny chips of tungsten-carbide metal set in a plastic holder. Swish your carving knife or seissors blade three times, lightly, between the opposed carbide "jewels" and it comes out razor-sharp.

Plane Parts Sheathed in Carbide

Today a farmer can have his plow-share "hard-faced" with tungsten carbide in a local welding shop. Bulldozer blades now get the same treatment, as do cement mixers, threshing-machine teeth and airplane tail skids. One new process deposits a carbide film less than one thousandth inch thick on other metals. If an airplane manufacturer needs a light but rub-resistant motor part, he can enease weight-saving aluminum or magnesium in this wear-resistant tung-sten-carbide skin.

"Down time"—the unscheduled halt to replace worn or broken parts—is the enemy of high-speed production, the idler of expensive machines and skilled men. Until recently a sewing-machine operator stitching mattresses used up two needles per mattress. For every 15 minutes of actual sewing, he spent 10 unproductive minutes changing dulled steel needles. Now, a single carbide needle stitches 600 mattresses for him between replacement halts. And in the time once wasted making more than a thousand needle changes, he can sew 400 additional mattresses

The Mesabi Calls In Its Reserves

Nearly two-thirds of the iron ore used in American blast furnaces in this century has come from Minnesota's famed Mesabi Range. But the Mesabi's high-grade ores are running out, and tapping the vast bodies of flint-hard low-grade rock nearby has not been feasible without an economic way to drill blast holes for dynamite charges. Diamond drills cost too much, Steel drills dull too quickly, make the process prohibitively expensive.

"Automat" That Rides the Rails Is a New Kind of Diner

This "Automat"-on-wheels supplements the during-car service on a New York-to-Washington train. Six vending machines, stocked with fruit juice, sandwiches, desserts, coffee and milk, offer a lunch for 75 cents. There are scats for 12 diners and a bar where an attendant serves mixed drinks and makes change for the machines. The car is a Pennsylvania Railroad experiment for licking the high cost of travel meals.

Brush Fire is Hosed from Air

THE transport above is dumping 1,600 gallons of water on burning brush in a California test of aerial fire engines. Experts plan to use such planes—toting 10,000 gallons of water—to wet down forest fires until ground parties can beat their way in.

Bridge Folds Like Scissors

ARMY engineers don't have to scramble around under enemy fire to set up this aluminum bridge at narrow-gap crossings. Flipped open hydraulically, it is launched by the modified tank that hauls it. It can carry loads up to 60 tons.

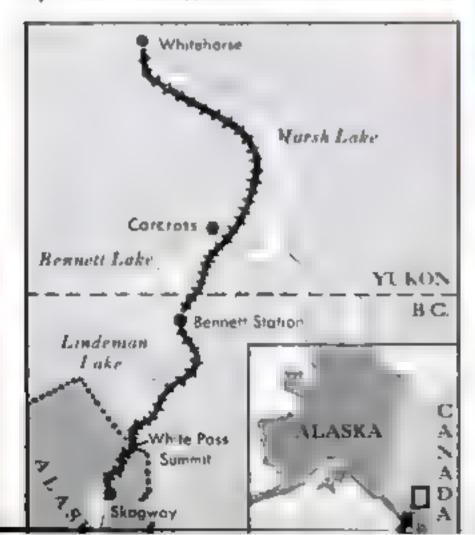

Baby diesels will challenge Yukon's brutal blizzards on

America's Toughest Railroad

By Richard L. Neuberger

IN THE Erie, Pa., shops of General Electric, workmen refer to two narrow-gauge locomotives they are building as the "Snow Plows." The blunt noses of these sleek diesels are reinforced to toss aside drifts up to two feet deep.

Along the 111-mile White Pass & Yukon Railroad, from Skagway, Alaska, to Whitehorse, Canada, where the new engines will challenge tough four-percent grades, I have seen the main line choked by snow during less than a five-minute

Built like buttering rams, White Pass & Yukon

delay between the passage of a rotary and that of the mixed freight train it was convoying

No railroad on the North American continent defies tougher terrain or more brutal, weather than this 36-inch-wide system, which now faces the third titanic boom in its history. In fact, the White Pass is the only rail line to touch the Yukon or Northwest Territories, those

64 POPULAR SCIENCE

diesels must give dependable service under conditions as tough as those at the North Pole,

lonely far-flung realms of the Canadian wilderness, measuring over five times the area of Texas

The White Pass & Yukon originally was thrust inland from Skagway in 1900 to take advantage of the Klondike gold rush. Four decades later, from 1942 until 1944, it made possible completion of the Alaska Highway by dragging countless tons of equipment from seaport to White-

horse, colorful old settlement where the tenderfeet loaded rafts for the voyage to the diggings. Today the White Pass & Yukon serves a primitive watershed in which light-metal companies of Canada as well as the United States are competing for permission to build a fabulous hydroelectric-power project costing at least \$500,000,000.

Regardless of how the rivalry is re-

Two straining WP & Y steamers nose a rotary through choking drifts on the main line.

solved, the colossal power-and-aluminum undertaking will be a bonanza for a pintsize railroad that got its start because prospectors had struck naked, glittering nuggets of gold more than half a century ago in a bleak, frozen place called Bonanza Creek.

The first diesels in the career of the White Pass will be ready for the line's latest bonanza by autumn. One factor has dominated their design—the weather they will encounter in a land where antifreeze has been known to stiffen in radiators, where Royal Mounties still make dog-team patrols back of plumed Huskies, and where caribou herds search for forage in the crackling glow of the aurora borealis.

Mercury Drops Out of Sight

From the beginning, General Electric had to plan box-type cabs for the pair of White Pass locomotives, because the fireman should be able to reach engine apparatus without braving the outside elements. At that, fur parkas will be rolled behind crewmen's leather seats for use in an emergency. When switcher-style construction, with its outside running board and engine hood, was discussed, White Pass officials warned that it might be impossible to break loose the enginehood doors from their sheath of ice.

Despite its brief length, the White Pass system experiences sharp extremes in sub-Arctic weather. On the seacoast slant of the divide, it bucks relatively mild temperatures and stifling cushions of snow. Once the tracks are snugly inland from the summit, snowfall tapers off but the mercury drops out of sight.

I remember one day at the peak of construction on the Alaska Highway when Air Force recording instruments registered a grim 66 degrees below at Whitehorse, northern terminal of the WP & Y, but a balmy eight degrees above zero at Skagway, where trains are dispatched off the wooden wharves and up the forbidding hill,

One has to see the railroad hill above Skagway to believe that such a grade could really exist and, above all, be conquered nearly every day. Only the worst storms stop the WP & Y. In a space of 20 miles, the track ascends from ocean water at Skagway to an elevation of 2,885 feet on the summit of White Pass. Curves of 16 degrees and a maximum grade of four percent coil trains like a cowpuncher's lasso. In many places, car steps overhang sheer drops of 1,000 feet. All the gorges bellow with white water. The average grade for the 20-mile climb is 2.6 percent. Three steam engines, peppered throughout the train, are normal power on a mixed consist of one baggage car, one day coach, a parlor car, 16 loaded freight cars and a caboose.

Rotaries Clear the Way

On top of the mountain above Skagway, exposed to williway squalls from the Alcutians, the line may be buried beneath 40 crushing feet of snow. The

KEEPING WATER UNFROZEN for thirsty steam locomotives has previously created a trouble-some problem of heating tanks all winter. Diesel-electrics won't need this service.

Snow often piles 40 feet deep beside the track, and trains drop from view in cuts like this.

NERVOUS PASSENGERS on the WP & Y, in their parlor cars at the end of the freight train, look the other way when they round this curve on the downgrade to Skagway.

two-story station at White Pass Summit, where customs men and Mounties guard the border, disappears in drifts. The slender track is lost in the yawning cuts carved by rotary plows. Unless a rotary is run close enough to a train for red trailing lanterns to be visible, its work may do no good. Blizzards can seal a cut while an engineer is lighting his corncob.

Box Cab to Minimise Gale Impact

This explains why the new diesels will be fitted with prows of double thickness to defy the Storm King. In addition, all outside piping must be specially insulated. Fuel must be preheated and engine cabs lined with extra layers of metal. Storage batteries will need protection in the form of surrounding pipes which contain engine-cooling water. With a box cab, apparatus in the engine compartment will have a larger air cushion be-

tween it and the hood than would be customary with a road-switcher type of construction. This will minimize the impact of gales of Himalayan intensity

Every piece of equipment on the \$145,-000 diesel-electrics for the narrow gauge must be shielded from conditions actually colder than those that Admiral Peary endured on his trek to the North Pole.

Each locomotive will measure 39% feet from coupler to coupler. It will roll on a pair of six-wheel swivel trucks. The rating of the diesel engines is 800 horse-power. The units weigh 80 tons apiece. Because the emphasis will be entirely on tractive effort up the continent's stiffest railroad grade, top pace of the streamlined beauties is to be merely 40 miles an hour.

Diesel-Electrics Will Pull 250 Tons

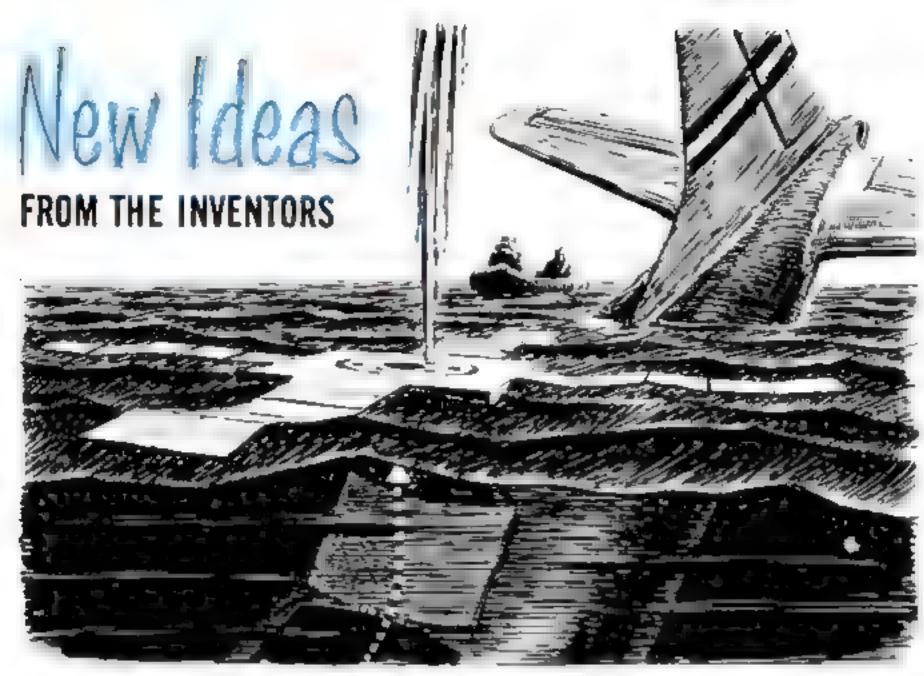

"We want these engines to get tonnage over the hill, not win a cross-country speed derby," said C. J. Rogers, veteran white-haired president of the WP & Y.

Rogers predicts that each of the new G.E. diesel-electrics will pull a gross of 250 tons from Skagway to the top of the pass. This contrasts with a peak load of 190 tons by a 70-class steamer, which Rogers describes as "the best narrow-gauge steam locomotive ever put together." Baldwin turned out these engines for the White Pass in 1937.

Though only 111 miles long, the WP&Y is as long as it has to be. It extends from an ocean port to the head of navigation on the Yukon River, The railroad operates stern-wheelers and cargo barges over the foaming waterway, through Five-Finger Rapids, to Selkirk and Dawson and other mining settlements. Near Whitehorse, the 36-inch-gauge crosses the Alaska Highway, so the railroad likewise runs buses on the 1,523-mile road from Dawson Creek, in British Columbia, to Fairbanks.

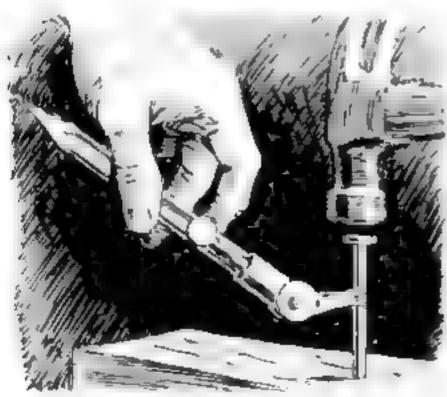

As the principal land gateway to the Yukon, the WP & Y is very much a thriving institution. It owns 297 freight cars, 17 parlor cars, seven express cars and four coaches. The parlor cars have

[Continued on page 284]

1 Marker to Guide Air Rescuers. The search for survivors of plane- or ship-wrecks might be aided by a floating position marker and automatic signal flare. This device would be housed in a fuselage or deck

compartment. If a plane struck water or a boat submerged, it would float out and uncoil a large cross visible from the air. Batteries and a timing mechanism would set off flares at predetermined intervals.

2 Magnetic Holder to Start Nails. V-shaped, magnetized fingers on this pencil-cap null starter would hold a null of any size in position for the first hammer tap. The magnetic gripper would eliminate danger of painful accidents, steady nails in hard to-reach spots, and handle brads that are too short for a man's fingers.

3 Wiper to Clear Side Window. You wouldn't have to peer through a rain-clouded window if your car had this wiper attachment. A metal channel, screwed to the frame between vent and window, would form a track for the blade support and a removable handle. The handle could be unpinned to permit full closing of the vent.

MORE New Ideas from the Inventors

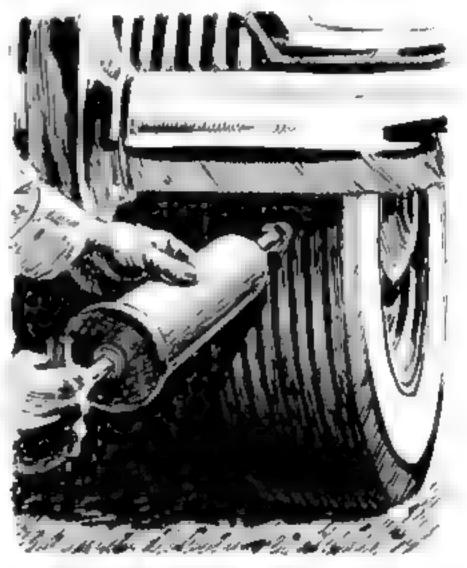

4 Saucer to Keep Cup Dry. Coffee or tea that sloshed into this saucer would not drip onto table or clothing when you lifted the cup. The sloved outer surface of the dish would dram spilled liquid to one side and keep the cup bottom dry. A platform in the center of the saucer would support a matched cup in normal position.

5 Bit to Brace Camera. Instead of leaning a camera against his cheek or chin, a photographer who used this "dentapod" could steady the picture box by gripping a bit between his teeth. A bent metal bracket would attach to the camera's tripod socket. Bit height would be adjustable so the user could set the view finder at eye level.

6 Dental Switch to Say "Ouch." You can't talk back to a dentist when he's hard at work, but with this gadget you could at least tell him when it hurts. A switch held by the patient would flash a "pain" signal. Or it could be set up to give the signal and disconnect the drill at the same time. Even if the switch were not used, the patient would feel better for having it,

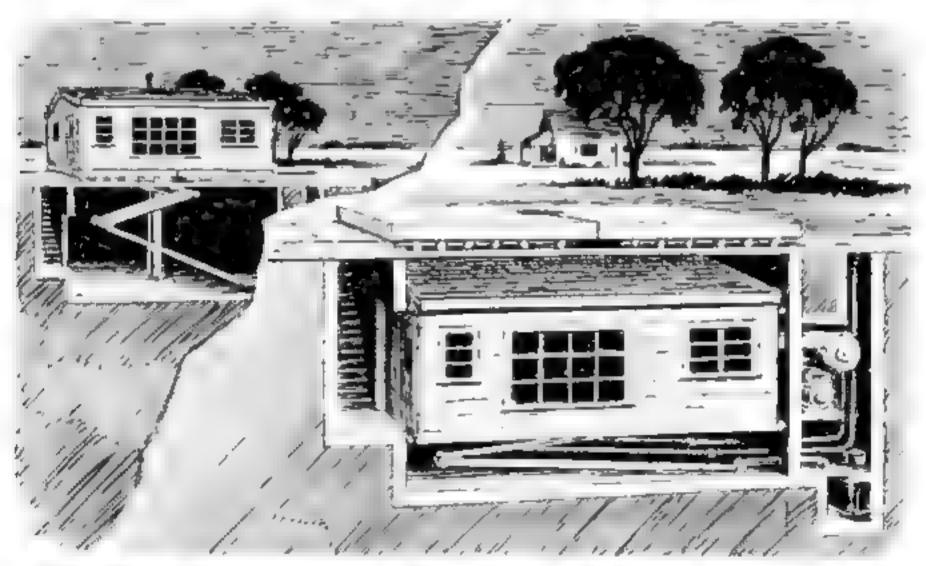

7 Gun to Inject Tire Patch. It isn't necessary, says this inventor, to remove a tire in order to repair a puncture or stop a slow leak. Instead he would inject an air-setting latex paste through the hole left by a nail, tack or the like. If the tube is partly inflated, he claims, the rubber composition will spread evenly and seal both tire and tube permanently.

ers could enjoy hot meals without bothering about campfires if they carried food in self-heating cans. This one would have a false bottom containing a cake of chemical fuel. It would be friction-ignited by a twist of the can bottom. A removable metal seal would prevent accidental twisting.

9 Periscope to Widen Rear View. A pair of mirrors in a car dome would eliminate usual blind spots and reflect an unobstructed, wide-angle rear view onto a third mirror mounted on the dash. Extra sets of mirrors, properly angled, would widen the range of vision still further, giving a driver a panoramic rear and side view.

10 Building to Duck Underground. This house would duck into an air-raid shelter along with its owner. Normally, the retractable structure would rest on roller-mounted concrete slabs. In the event of an air raid, the slabs would be rolled out from

under, permitting the house to be lowered by a hydraulic elevator. The concrete floor would then slide back over the shelter Ducts and swivel-jointed pipes, would maintain normal ventilation, plumbing and utilities in the underground house.

b S patents on these inventions have been granted to: 1 M. Seseta, West Orange, NJ, 2 R Ingraham, San Antonio, Tes; 3 F Finea, Brooklan, 4. R Hadson, Madwin NJ, 5. P Culhoun, Guinescille, Fla.; 6 M Grazi and A Roe, Barranquille, Colombia, 7 C Note, Englewood, Colo., 8. J. Miron St. Leavent, Quebec, 9. R Darroch, Detroit; 10. W. Rowles, Santa Monica, Cal.

Gun-Bristling Tank is Floating Arsenal During Ferry Trips

No string duck is this M-47 medium tank when it has to be transported across rivers or other small bodies of water. Securely moored to a center platform surrounded by a series of sectional floats, the

armored vehicle's own 90-mm, gunz can be fired to protect it against enemy attack during the ferry trip. Army Engineers developed the flotation device, shown above being towed by a powered craft.

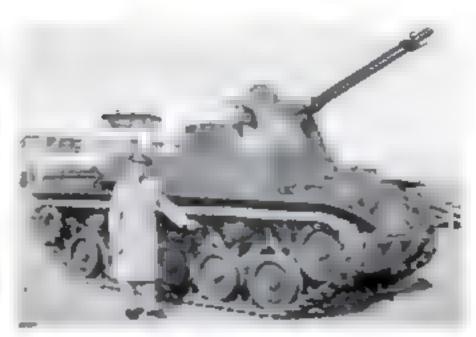

Husky Retriever Rescues Tanks

To HAUL disabled tanks and heavy gun carriers off the battlefield fast and under fire, the Army has developed this powerful, armed T-51 tank retriever. Dragging one tank, as shown at left, is child's play for the vehicle, says the Army. It has enough muscle to tow three medium tanks over rough ground at the same time.

A.A. Gun Mounted for Mobility

Secretary cloaked the development and production of this new defense weapon, a twin-40-mm, antiaircraft gun, shown at right when it was recently allowed to pose for photographers. For mobility, the gun is mounted on an M-42 motor carriage.

▶▶▶Palomar's 200-inch telescope has filmed stars 6,300,000 times dimmer than the dimmest visible to the eye. A meter so sensitive it could pick up a candle flame 15,000 miles away checked the scope's performance.

Scattier than ever, this gocart not only takes off in a hurry but pulls up short and handles well in a tight turn.

New Engine Zips Up Little Willys

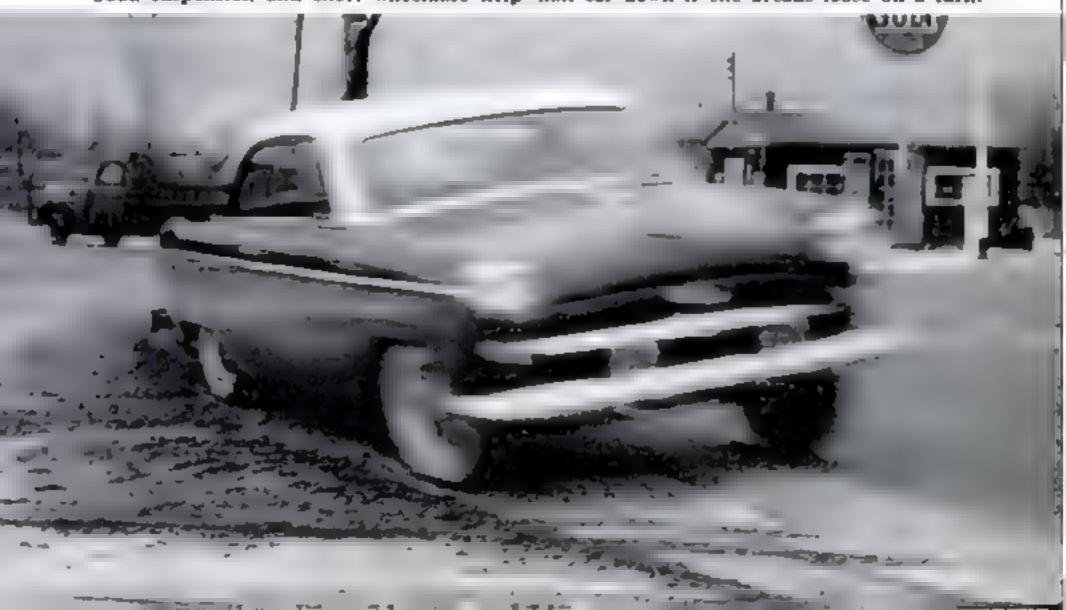

Prezident, Indianapolis Motor Speedway

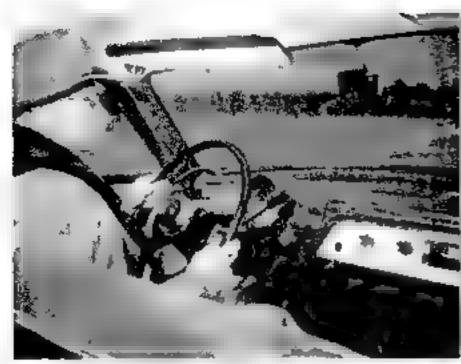

BOLT 115 horsepower onto a welded unit frame that measures 108 inches wheel to wheel, and you get the new Willys, an agile car for a tight market.

For the driver who doesn't feel like piloting 4,000 pounds of steel and cast iron down to work or the local supermarket, one of Willys' three models for 1954 may be the answer.

Heading the list is a lively hardtop, the Aero Eagle, followed by the Aero Ace, a de luxe model, built in both two-and four-door body styles. Both cars are powered by the new 115-hp. L-head six, called the Super Hurricane, and weigh

Good suspension and short wheelbase help nail car down if she breaks loose on a turn.

HIGH SEAT and big windshield put you right up where a driver ought to be. Turn your head and you can see all four fenders.

THAT SPORTY SPARE on the hagle t ustom gets the fifth wheel out of the trunk, leaving more room inside for luggage.

from 2,904 pounds to 3,058 pounds, depending on the transmission installed.

Number three in the line-up is the Aero Lark, also available in sedan and coach bodies but fitted out with standard equipment and powered by Willys' Fhead 90-hp, six. Dropped from production this year are the two Falcon models and the 75-hp, L-head six that formerly ran both Falcon and Lark models.

It was a blustery day when I took a snappy red-and-ivory Eagle up through Toledo and into the rolling farmland outside the city. The wind plus plenty of traffic and low temperature made for rugged driving conditions.

High Seat Aids Visibility

Visibility in this car is excellent. The driver's position up on that chair-height front seat helps keep you alert. From the driver's position you can see all four fenders. Some people might object from an artistic standpoint to the rearfender fins that make this visibility possible aft, but you can see them.

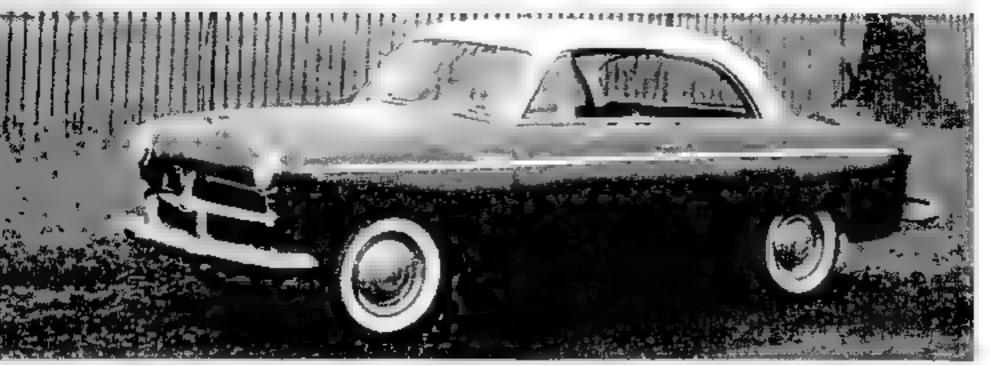

A big man would have a little squeezing to do to get under the wheel, and he might have headroom trouble both in front and back seats; but for the average-sized guy Willys has provided adequate room. Considering the shortness of the ear, it has a remarkable amount of passenger and luggage space.

This Eagle moved along well through traffic, and out in the country it really flew. The Eagle and Ace with Hydra-Matic carry 26.59 pounds for each horsepower, which rivals the hottest of the Big Three.

There is plenty of push for emergencies where you need acceleration. Holding it at 70 m.p.h. along a deserted stretch of road seemed easy and natural for the car, and there was lots of pedal left. In fact, here is a car in which you're going to have to exercise the caution you should use when driving any vehicle. The Eagle's high power-to-weight ratio plus that comparatively short wheelbase and hefty layout of brakes combine to make a hot demisized car that will stand you on your head if you don't watch the corners and fast stops.

I would call the car quite well shocked. It's a bit stubby at low speeds, owing partly to the short wheelbase, but when you get up to road speeds the ride smooths out nicely. Willys engineers went after the ride problem in this model by redesigning shock-absorber mounts and replacing the old horizontal seat springs with vertical coils. To take the jounce of the heavier engine, extra-long front coil springs were lengthened even more and shock absorbers were remounted. Both fore and aft seats are set so far forward in this car that I suspect passengers in both positions have the same ride.

Back in town the Eagle showed its stuff in maneuverability. It's nice to be

'54 STYLING CHANGES include new head-lamp rims, new tail lights and hubs, outside spare, and a bigger rear window. Front grille is

slightly altered, to allow space for longer engine. Styling of this Aero Eagle hardtop conceals the fact that wheelbase is only 108 inches.

able to turn around in an average street with one twist of the wheel and ease into parking spaces other drivers have to pass up with teeth gnashing. Yet, in my book the hardtop's steering was too slow for a car of its weight and length. This year Willys is offering the customers power steering as an optional extra

Willys stylists edged around a major body change by a matter of a scant inch or so. The new 226 2-cubic-inch engine is about 3½ inches longer than the 161-cubic-inch power plant it replaces. This could have meant extending the car's length by that amount. But instead of lengthening the hood or letting the new Super Hurricane stick back into the driver's compartment, designers simply notched out the old deep-set grille and

reworked the front frame cross member. Only noticeable changes are two fins on the grille cross foil, and even these are mounted back in the opening flush with the new radiator which they brace

Willys has gone after the ventilating department in a big way for 1954. One of their exclusive features is the air-intake and blower system that has two open-air ducts instead of one. With this setup the heater will give you fresh air directly into the car and also fresh air through the heating core. The blower system lets you have fresh cold air through the defroster to get rid of fog faster; it recirculates inside air when you're going through heavy traffic or dusty areas; and in winter it supplements warm air counning through the second duct.

FACTS ON '54 WILLYS

Model: Acro Eagle hardtop two-door sedan.

Engines 6-cyl. L-head; 115 hp. at 3,650 r p.m.; compression ratio, 7 3 1 piston displacement, 226.2 cu. in bore and stroke, 3 5/16" by 4%", torque, 190 lb.-ft. at 1,800 r p.m.

Weight: 3,058 lb.; per hp., 26.59 lb.

(with Hydra-Matic)

Transmission: standard, three-speed manual shift; overdrive or Hydra-Matic available. Rear-ade ratios, 3.54.1 (standard) 4.10.1 (overdrive), 3.31.1 (Hydra-Matic)

4.10.1 (overdrive), 3.31.1 (Hydra-Matic)
Steering ratio: 23.7:1, radius of turning circle, 19'.

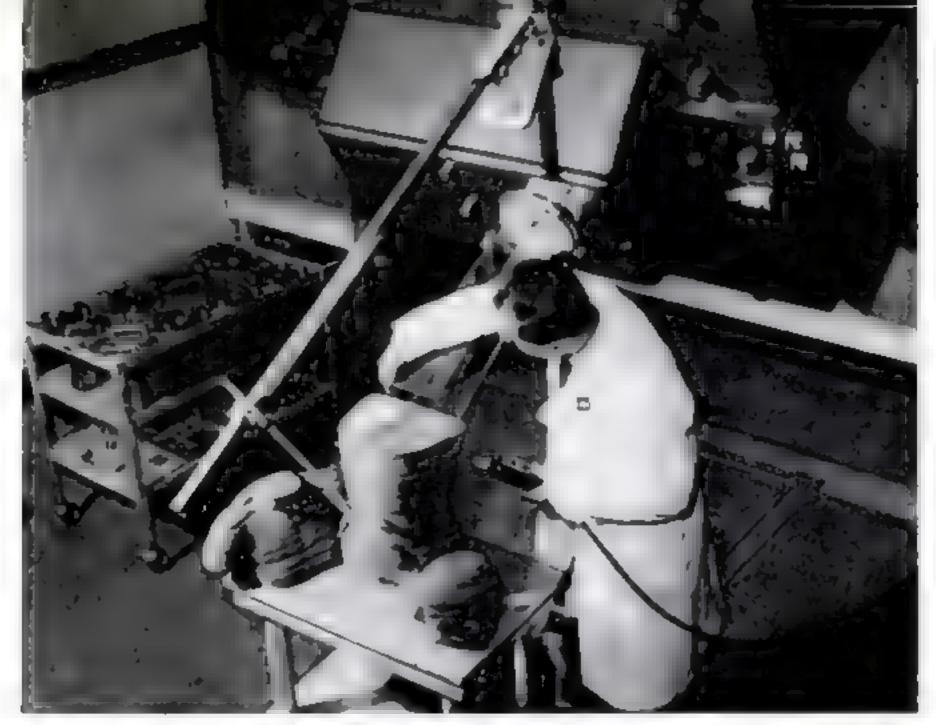

Effective brake-lining area: 132 81 sq. m.

Springs: front, coil, rear, semi-elliptic, 7 leaves 2" by 48".

Outside dimensions: height (loaded), 60"; over-all length with humpers and guards, 180%"; width, 72"; wheelbase, 108", overhang, front 32", rear 40 8/10"; trend, front 58", rear 57".

Inside dimensions: seat-cushion width, front 61", rear 61"; leg room, front 42%", rear 38%"; headroom, front 35%", rear 34", seat height, front 12%", rear 12%"; vertical distance, steering wheel to seat cushion with seat in mid-position, 5%"; front-seat adjustment, horizontal 4".

Tire size: 6.40 by 15.

Cancer-Treating Machine Uses Dummy as Stand-in for Patients

A WOODEN dummy helps set the right dose of cancer-killing rays from this powerful betatron, only part of which shows at top of photo. The dummy, designed to simulate the density of human structure, is made in sections so that penetration to different parts of the body can be measured. It is used at Memorial Center in New York City.

New Battery Is Small and Light

A NEW nickel-cadmium battery, about half the size of a conventional storage battery, will become available this year for cars, boats, planes and farm machinery. It uses sintered plates, plastic and fabric separators and plastic cells like the small one above. Though it will cost from two to five times as much as a lead-acid battery, its maker, Sonotone Corp. of Elmsford, N.Y., says it will last longer.

Plastic Car Tops 100 M.P.H.

An excess of only 60 horsepower drives this little Jowett Jupiter sports car at more than 100 miles an hour. With overdrive fitted to the four-speed transmission, the car can make nearly 120 m.p.h, The body is of plastic, and the one-piece hard top can be removed to convert the car into an open model. The windshield also can be taken off. The machine is made by Jowett Cars, Ltd., in England.

I'd Like to see them make...

A FOLDING RULE with an eyelet at one end so it could be hung as a rough plumb for wall-papering, tracing study for attaching wall-board and the like.—A. Bane, Kennett, Mo.

PLAY-PIN MATS like electric blankets. They'd be fine in early spring when house heat is turned off, leaving floors too cool for a baby.—Mrs. S. Milazzo, Cincinnati.

TAPE-RECORD PLAYERS on car radios. When you hit poor radio reception or uninteresting broadcasts, you could switch on the cartridge-loaded player.—A. P. Sabol, Harwick, Fa.

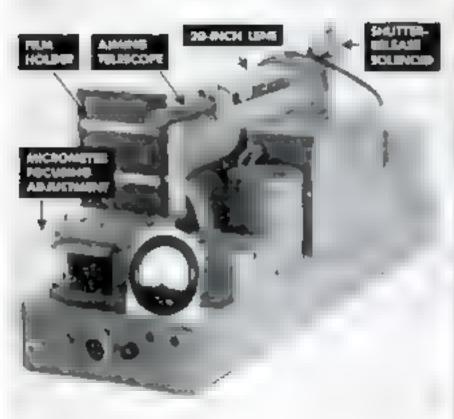

A SELF-SOAPING SHOWER. A dial-operated, built-in container to feed soap to the water stream would eliminate the job of hanging onto a soap bar.—S. Skalka. Brooklyn.

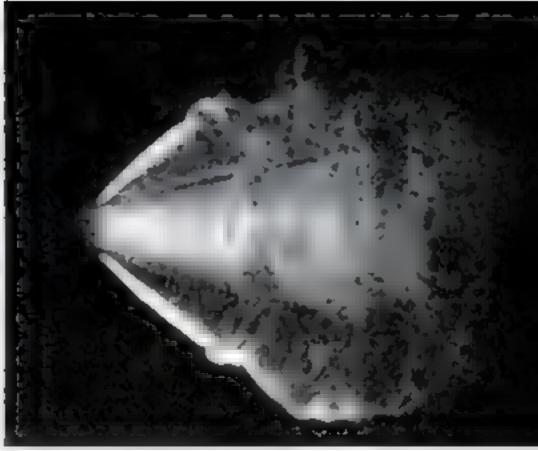

CIGARETTE-LIGHTER FLINTS that give off colored sparks as a warning when worn down to the point where a replacement is about due.—
G. L. Albertyn, Johannesburg, South Africa.

Everyone has his own pet idea of a gadget he would like to see in general use. The five ideas illustrated above were suggested by PSM readers. What is

Truck Checks Speedometers

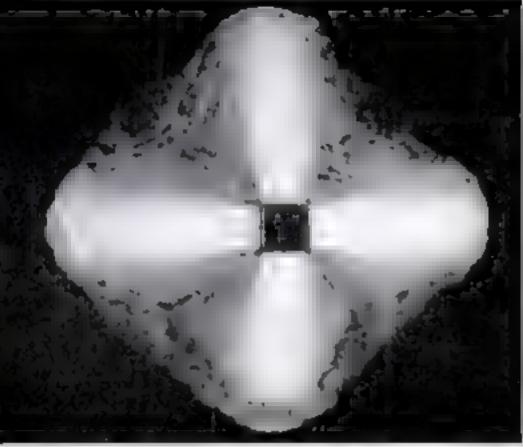

A SPEEDER on Holland's highways can't say he didn't know how fast he was going because his gauge was out of whack. Technical-assistance trucks cruising the roads to aid tourists in trouble display huge speed-ometers so drivers can follow and check the accuracy of their own dial readings.

Tiny balloons, so small it takes 770 of them to span an inch, may save millions of gallons of oil from loss by evaporation. The plastic, nitrogen-filled microballoons are poured an inch thick on crude oil in storage tanks to seal it off. Standard Oil Co. (Ohio) says the floating cover, rising and falling with the oil level, cuts evaporation from four to about one-half of one percent.

Phone Booth Frees Both Hands

This lady is making a phone call from an experimental booth set up in Boston's South Station. She hears through a recessed speaker (at her left ear) and talks into a mike jutting out beside it. There's an onoff switch and a volume control but dialing is done by an operator outside the booth.

side and end views of detonating sticks of pentolite. All were caught in a few millionths of a second by the Rapatronic, which has a shutter of "crossed" Polaroids that

keep light out except for the instant when the polarization of the light is changed by a magnetic field. It was developed by Edgerton, Germeshausen & Grier.

▶▶►Instead of lighting the fuse in each drill hole separately, mine blasters now stay at the loaded face only long enough to light a single fuse. This igniter cord lights the individual charge fuses in rotation. The igniter cord—said to be more satisfactory than electricity for detonating the holes—is being used in Canadian mines of the International Nickel Co.

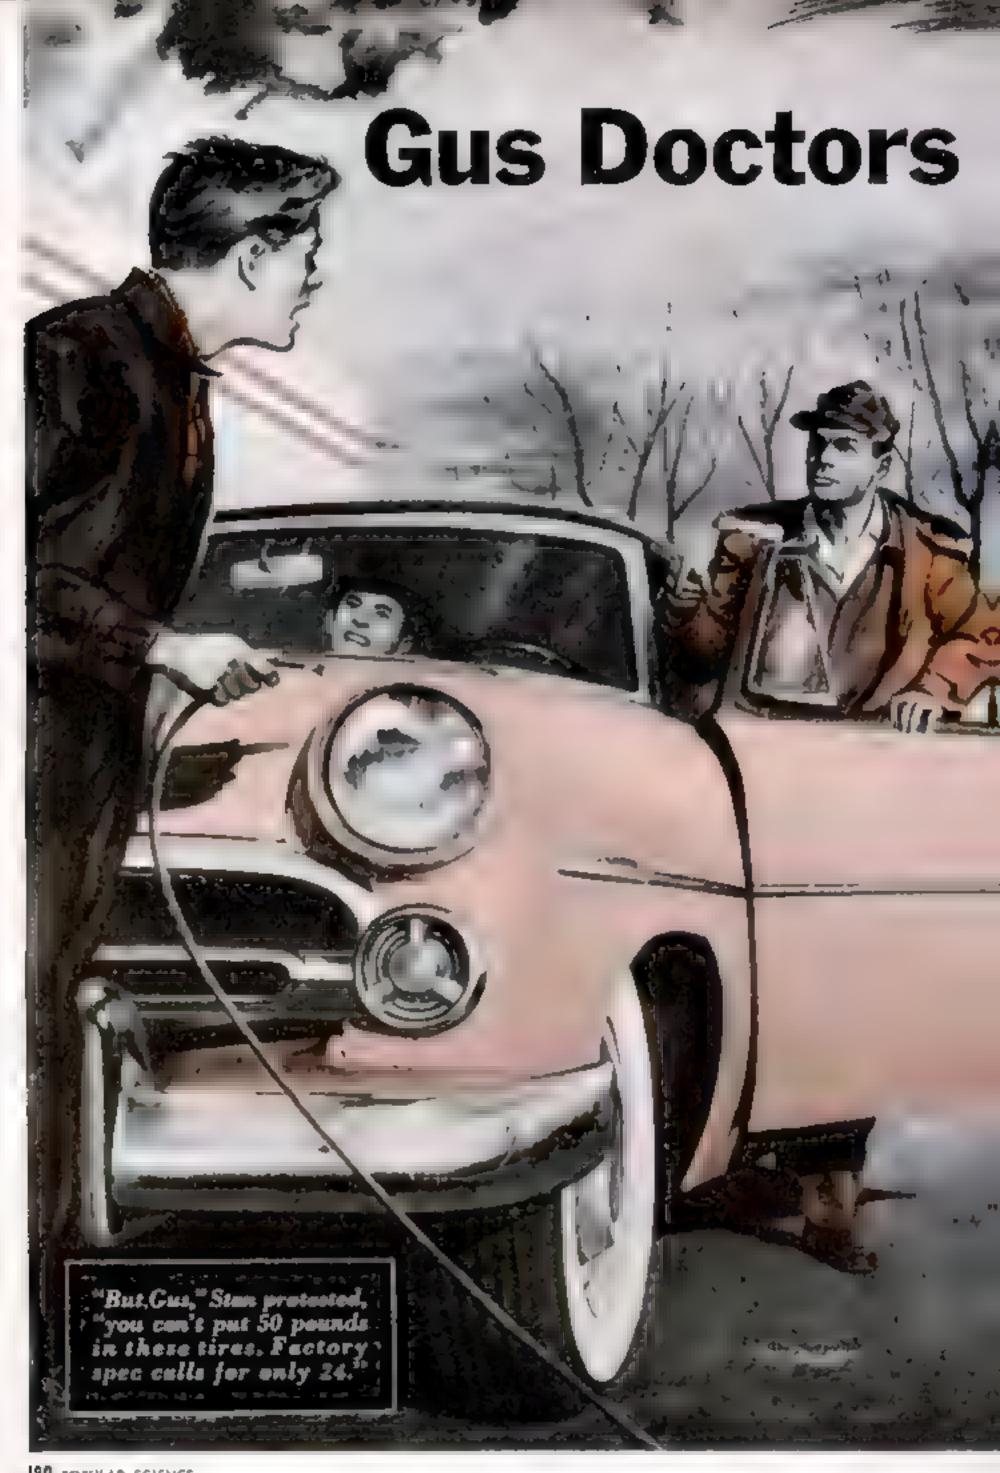

Glass Wheel Polishes Plastics

A NEW burnishing wheel pits plastic against plastic to smooth and polish molded products like the helmet liner above. The resin-impregnated, glass-fiber wheel has parallel grooves in which grinding is done to remove "flash." Previously, grinding and polishing were done on separate equipment.

Hot Crystals Guard His Hands

The punch press above won't wham down on the operator if his hands stray into the danger zone. Geiger tubes (circled) pick up radiation from hot crystals in his leather wristbands to halt the punch even in midstroke. United Airlines uses the safety device at its San Francisco maintenance base.

a Case of Jitters

With an ex-GI's reputation at stake, the Model Garage uses high-pressure methods on a car with the shakes.

By Martin Bunn

ALF MADSEN'S loose talk, soon after A he returned from service in Korea, bothered Gus Wilson, Madsen drove that car of his around town as he had piloted his jet fighter overseas-fast and flashy.

And he complained. That was the nub of the problem. If he didn't button his lip,

there was going to be trouble.

That is, there would be trouble for Big Bill Pederson. Pederson had sold

Madsen the car. Pederson. too, had been in Korea. Now he ran a used-car lot a few blocks from Gus Wilson's Model Garage.

"The car's no good," Madsen kept broadcasting around town. "It's got the shakes."

It was a cockeved situation. Alf Madsen had been a lieutenant in the Air Force, Big Bill only a corporal in the Army Engineers. Alf was the son of one of the town's more prosperous citizens.

"If Madsen keeps shooting off his mouth," Gus remarked to his helper, Stan Hicks, "the first thing you know, Big Bill Pederson will be out of business. That kind of talk gets around fast."

"If he won't back up his guarantee," Stan Hicks retorted, "maybe it would serve him right."

Maybe, thought Gus, it wasn't that simple. Or maybe he was wasting his sympathy. Maybe Pederson didn't deserve the breaks. Funny, though, both men were running true to form. He had known them as kids. Pederson was big of frame, slow, seemingly honest. Alf always had struck him as being an okay kid. He was just bumptious.

At lunch time Gus went out of his way to drop in at Pederson's used-car lot. It was small and neat, Every car was shined and polished, with the price tag on the windshield. It didn't look like a gyp joint to Gus. Pederson came out of his small office-and-shop, a tall, widespanned young man, in slightly soiled coveralls.

"Gus Wilson!" he exclaimed, holding out his hand. "I haven't seen you since I got back. Every time I passed your shop your legs were sticking out from under a car. Didn't want to bother you."

A Man Has to Watch His Step

"Been pretty busy," Gus said, shaking Pederson's hand heartily. "But lately things have dropped off. I came around to see if you might have some work you could shove my way."

"Golly, Gus," Pederson said, "I'm sorry, but you see I'm running here on a shoestring. I couldn't get by unless I did

my own work."

Gus eyed the neat lot. "You've got a nice little place," he said. "Should do well. The only trouble with the usedcar business in this town is that a man has to watch his step. One sour deal can start folks to passing him by."

"How right you are," Pederson said

with fervor. "That's why every sale I make has to be on the level."

"Well," Gus said, "Til have to be mov-

ing on." He turned to go.

"Wait!" said Pederson. He moved closer to Gus. "I've been away from home so long I'd almost forgotten a few things."

"Such as?" Gus asked.

"Among other things, that Gus Wilson doesn't go around the neighborhood drumming up trade, and that he doesn't talk just to hear the sound of his voice.

Just what were you getting at a moment ago?"

Gus idly knocked the dottle from his pipe.

"Been some talk," he said bluntly, "about the Madsen deal."

Pederson scratched his jaw, "What would you do about it?"

"I'd fix it," Gus said softly, "or refund Madsen's money."

"But I can't refund his money," Pederson grouned. "I took the cash from the sale and bought two cheaper cars. Believe me, Gus, I'd refund to Madsen if I could."

"Well," Gus said, "what about fixing the car?"

"I can't fix it," Pederson said angrily, "and neither can anyone else—not to take the speed Madsen drives it. I've checked it from bumper to radiator cap. There's nothing wrong with the car. It's just one of those jobs that naturally vibrate a bit at high speeds. You've seen such cars, Gus."

Gus Makes en Offer

"Yes," Gus conceded. "How about tire and wheel balance?"

Pederson snorted, "Tires and wheels

balance perfectly."

Gus scratched his head, "Why not let me look at Alf's car?" he asked. He added, to save Big Bill any embarrassment, "I just want to smell around a bit. Might save me taking a licking later, when I run into one like it."

Big Bill Pederson put his hand on Gus's shoulder, while a slow smile formed on his face.

"Years ago," he remarked, "I used to come around to the Model Garage to get my bicycle fixed. I guess things haven't changed much,"

Pederson brought the car in 'at midafternoon, Gus left the garage in charge of Stan Hicks, and with Pederson beside

him, took the machine out on the highway leading to Stanfield. The sleek coupe purred like a kitten. It should have, It had less than 10,000 miles on the speedometer.

Gus watched the speedometer needle climb — 50-60-65-70. At 60 the car's smoothness began to fade. This wasn't something a man

could tack squarely down. Gus had never heard anything quite like it, yet he realized that it was vibration.

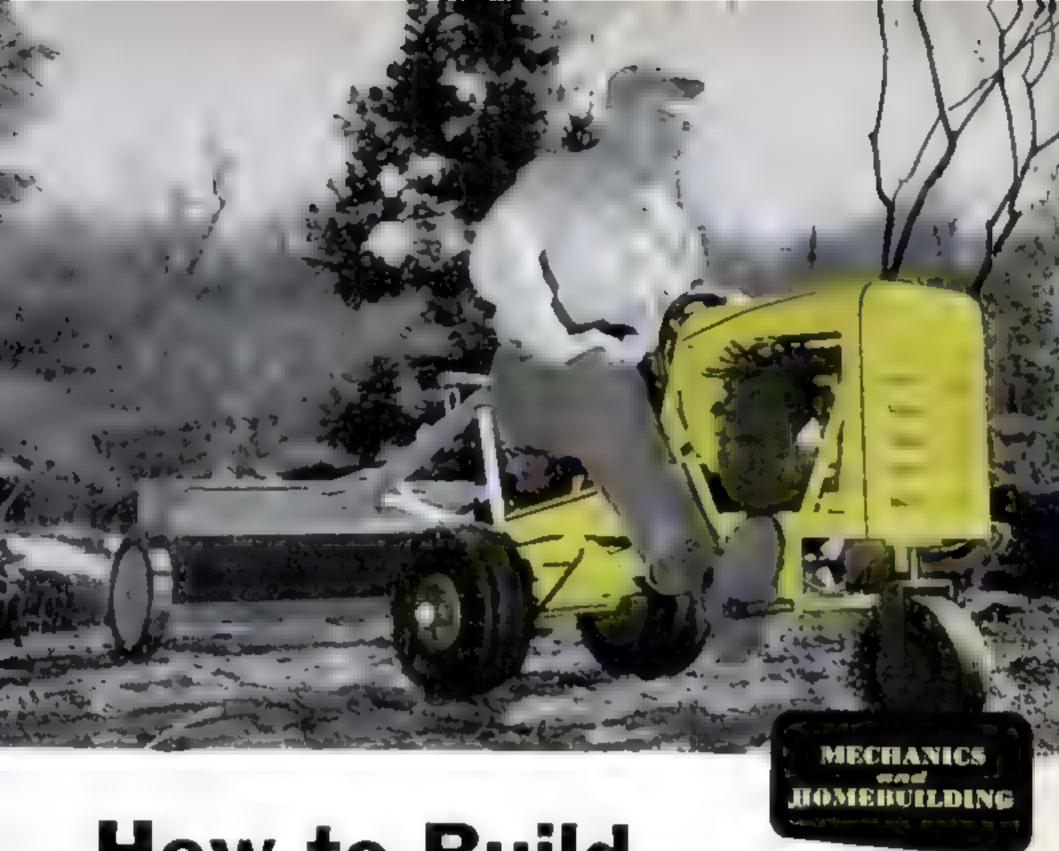

It could be anywhere—a loose flywheel, loose or too-tight motor mounts, motor slightly out of line, loose transmission to the bell-housing studs, worn or dry universal joints, wheel bearings, out-of-balance main, or the drive shaft. A line of worry began to form about Gus's eyes.

What did I tell you?" Pederson said Gus took the car back to the garage. He raised the hood, backed off the motor forward mounts, tightened them so that they were snug, but not to flatten the rubber cushioning. He put the car on the hoist, removed the flywheel cover and checked the flywheel for looseness with a bar. He tightened the studs that held transmission to bell housing, loosened the rear transmission support, wiggled it to make sure the transmission fell in line and retightened it. He greased and

"Clancy must be off duty. I generally see him on that corner back there."

How to Build a Midget Tractor

You can look forward to those yard chores this coming spring with a motorized helper that takes over all the heavy work.

By Howard G. McEntee

WITH a baby tractor in the garage, Dad will be lucky to get to the chores before Jumor beats him to it. This husky little power wagon lets you do the hard work sitting down, and makes fun of it to boot.

It has plenty of pep to drag a heavy lawn roller, pull a gang mower up slopes, draw a spiker or leaf sweeper, or hustle along a heavily loaded garden cart. What's more, if you want to run a power saw, small concrete mixer or water pump where there is no electricity, you can drive the tractor to the spot and take power off the engine.

The midget has enough getup to spin its wheels on a dry road, and upshifts on the run to attain respectable speeds. It is not meant for heavy work like plowing, deep cultivating or snow removal, which require a heavier frame, cleated tires and a greater engine-to-wheels reduction ratio.

If built entirely of new parts, the tractor will cost about \$150, a bargain in view of what it can do. Still, careful shopping and junk-box scavenging may cut that figure by a worthwhile margin.

How the drive works. A 1%-hp., fourevele engine, bought at a sale for \$40, delivers all the torque that the tractor can

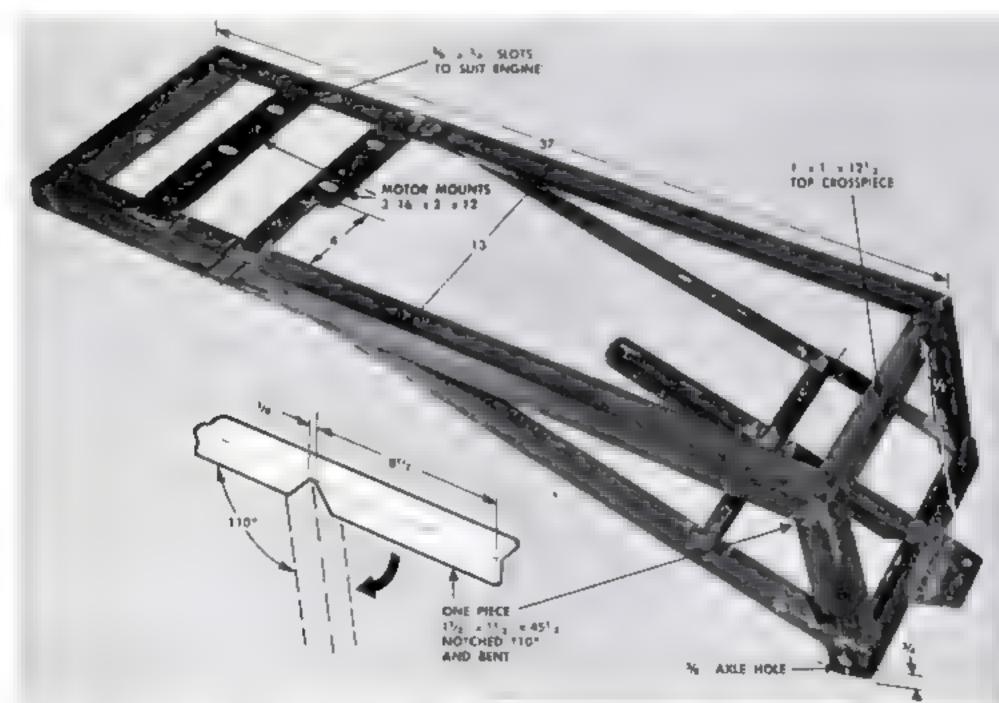

use. This power plant has magneto ignition, an air cleaner and a governor-controlled throttle. The hand throttle used by the driver merely changes the governor setting, so that engine speed remains constant at any load, an advantage on most jobs.

A used engine of similar type will cut your cost considerably, but be sure to check the engine base and make any changes in the chassis mounts necessary.

The heart of the drive system, and the solution to the knotty problem of a differential (to allow the rear wheels to turn at different speeds on curves) is an automatic double centrifugal clutch. This drives two separate countershafts, from each of which a chain runs to one rear wheel

Each belt sheave on the clutch has one fixed flange or cone, and one movable one controlled by internal weights. When the engine is idling, the movable flanges are held back from the fixed ones and the belts are not gripped. As the throttle is advanced, centrifugal force causes the weights to pinch the flanges on the belts. As engine speed rises further, the flanges squeeze still closer and push the belt outward to a larger diameter, in effect changing the size of the drive pulleys. A pair of springtensioned idlers keeps the belts taut at all pulley positions.

The clutch thus provides automatic up or down shifting to suit the load, giving

LONG MEMBERS of chassis are notched, bent and welded at rear corners. Front and lower rear crosspieces are full 13" width, overlap sulepieces to form closed corners. Top rear

crosspace is shorter, fitting inside the 110° corners. Rear motor mount is narrowed for part of its length to clear belts. To make slots, drill several holes and tile between.

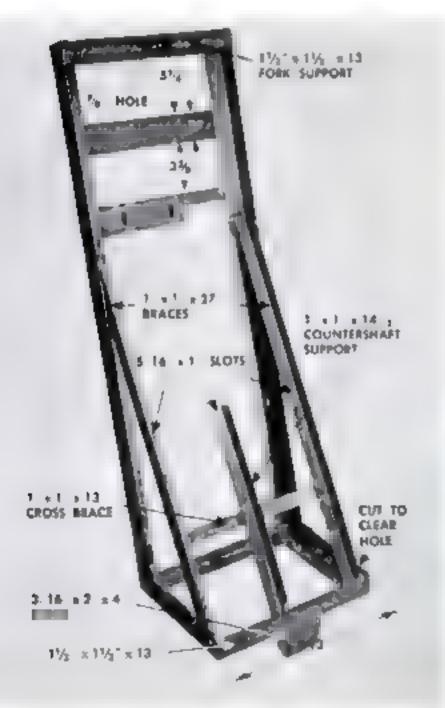

the tractor the equivalent of a transmission. On turns, the inside wheel tends to turn more slowly and therefore down-shifts, while the outer one speeds up and goes into "high."

There are no brakes, but the large engineto-wheel ratio supplies ample engine braking to hold the tractor even on a hill. No reverse is needed; it is possible to back up by pushing with both feet. For close maneuvering, you can easily swing the machine

by lifting the front end.

Start with the frame. This is of angle iron and can be riveted, bolted or welded together. Welding saves so much drilling, extra brackets and fussy joining that it is worth what it costs to have it done if you're not equipped to do it yourself. All the welding on the tractor shown came to \$9. A welded frame will stay tight despite the shocks and torsion that it has to take in actual use.

If you do have welding done, cut and fit all parts with care and clamp them in

DIAGONAL BRACES are welded inside chassis niembers. One flange of these (and of the center countershaft mount) is notched at bottom end to clear bottom crosspiece and axle.

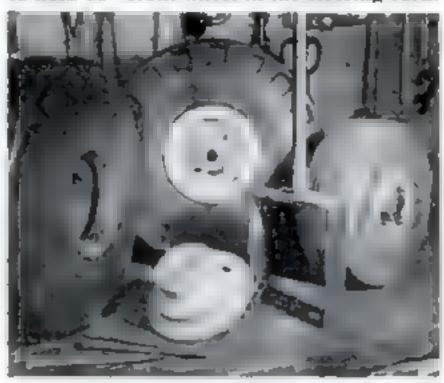

position insofar as possible before taking them to the welder. The less time he needs to spend on these preliminaries the less his work is liable to cost you.

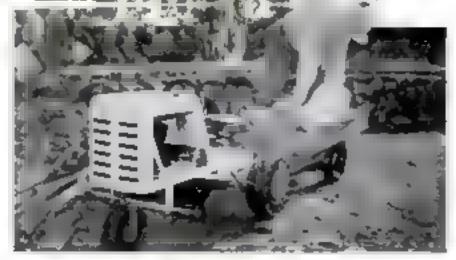

Drill as many holes as you can before assembly. Where holes must line up (like the ones for the rear axle), poke a rod or piece of shafting through when clamping

up the parts.

The steering gear, fork shaft and hood are supported by two square-cornered frames, each made of a single length of 1" angle by notching and welding at the corners.

Fitting the scheels. You will have to take apart the big wheels to mount the drive sprockets. As the tires bulge when the four bolts are loosened, disassembly will be easier if you first run a long bolt

It Hauls a Cart

through the bearings and tighten a nut on it

The wheel hubs have a concentric shoulder, and if you have a lathe the sprockets can be bored to a close fit on this to make them run true. Any well-equipped garage or machine shop can do this for you.

You can avoid machining by filing or sawing the sprocket to an oversize fit on the shoulder and drilling the bolt holes oversize. Mount the sprocket with spacers cut from K" pape, long enough to set the teeth out at least K" from the tire. You'll have to replace the original wheel bolts with longer ones. Leave the nuts a bit loose. Set the wheel rotating on a K" shaft. Then shift the sprocket about on the bolts, with taps of a soft hammer, until it runs perfectly true, and tighten the nuts securely. Take the time to do a good job, for an off-center sprocket will make the chain run noisily and wear rapidly.

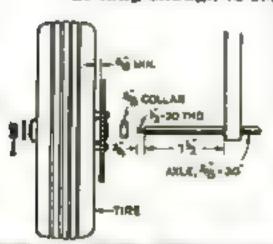

The axle should be shouldered and threaded in a lathe. After it has been welded into the frame, slip a shaft collar on each end. Slide the wheels up against the collars and put enough washers between the wheels and nut to take all slack out of the bearings. Then back off each nut one notch and cotter-pin it. It is a good idea to pack the bearings with grease beforehand and put rings of heavy felt between them and the collars or washers to keep out dirt.

The steering fork. The single front wheel is mounted in a fork bent cold from h" by-2" iron. A second similarly bent piece is welded inside to reinforce it. Both pieces are drilled h" for the h" fork shaft, which is shouldered to fit and welded both above and below.

At the top, the shaft turns in a hole in the front hood frame. Below, it runs in a ball bearing recessed into a %" plate (I used two %" thicknesses of dural). In mounting the wheel, pull up the axle not until the bearings have neither slack nor bind.

Two bevel gears from an Easy washing-machine wringer connect the steering-wheel shaft to the fork. These gears have 15 and 25 teeth, or a ratio of less than 1 to 2. This makes steering quite sensitive, and you may prefer gears that give a larger

DRIVE SPROCKETS are mounted on rear wheels with ${}^{1}4$ "-by-6" holts. Spacers cut from ${}^{1}4$ " pipe are slipped on the bolts first; they should be long enough to set sprocket $\frac{1}{2}8$ " out from

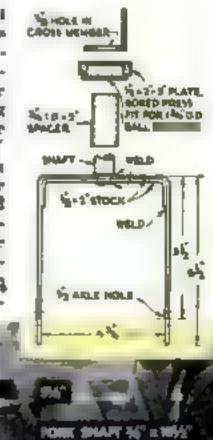

The state of the state of

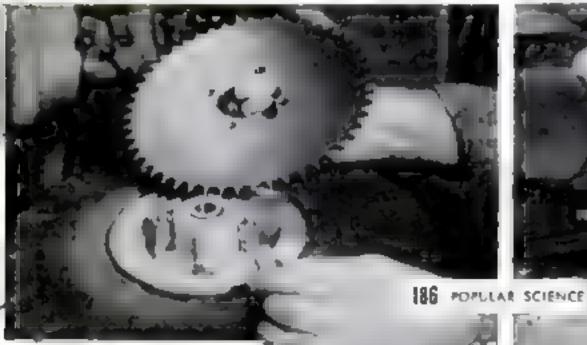

side of inflated tire. The distance from sprocket face to frame should be at least fall. Ends of axle twist be squarely shouldered and threaded to provide for adjustment of ball bearings. To facilitate assembly, clamp hubs with a bolt through the bearings.

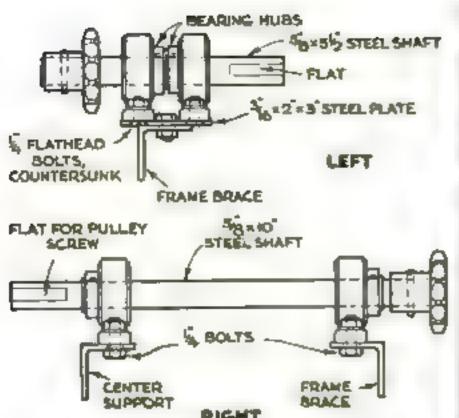

OVERSIZE HOLE, a free fit for ¾" fork shaft, is drilled near flange corner of front frame crosspiece. A 3½" thick plate to house the ball bearing is bolted under this. The fock is bent up of 1/16" flat stock, with an exten piece welded inside the top leg. Shaft is turned or filed to a 36" shoulder where it enters the fork hole, Footrest hangers are welded inside the long chassis members.

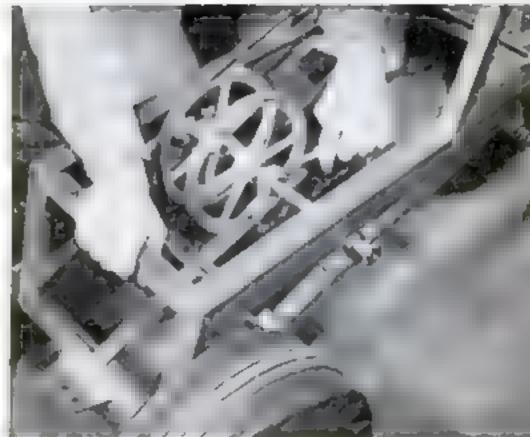

3/16"x2"x6/9

S/NA" ACKTS

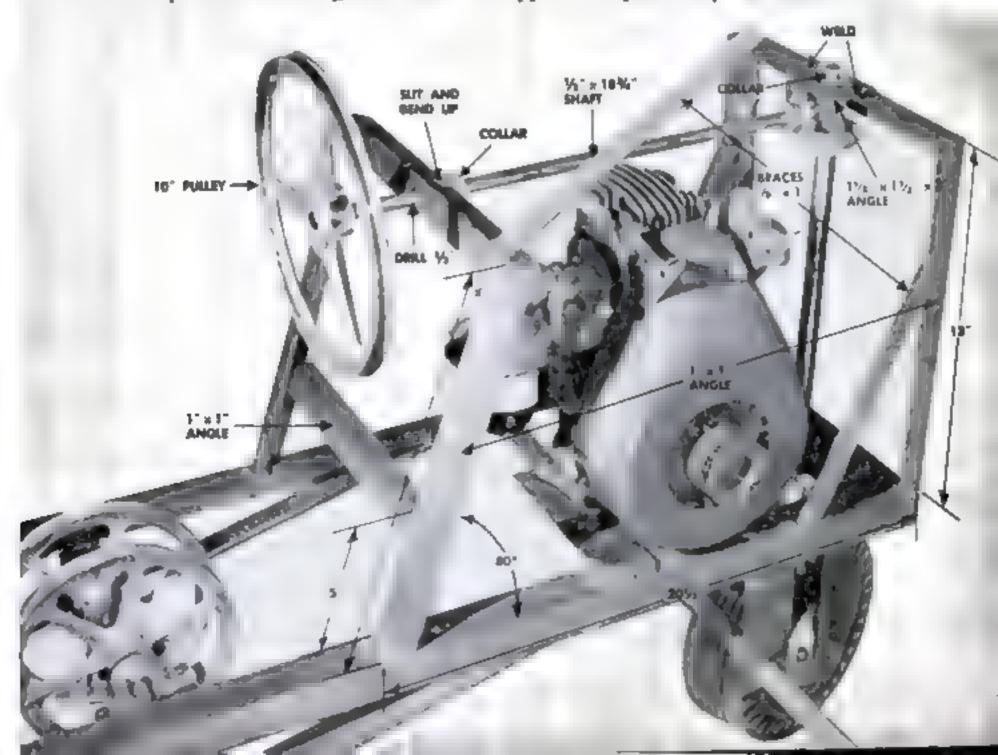

pillow blocks. For long shaft on right side, these are mounted on center support and frame brace. For the short countershaft on left side, both blocks are mounted on a steel plate bolted to the left-hand frame brace. All bolt holes are slotted to provide for taking

up chain at least one link length. Inner races of the bearings have protruding hubs with setscrews to lock shafts against end movement. File flats on shafts to give screws a good grip, Chain sprockets are secured with No. 0 taper pins, left one hub out to keep chain near frame despite bearing overlang.

HOOD FRAMES are built up from 1" angle, notched and welded at corners. Front flange of forward frame is long enough to overlap the chassis crosspace; other flange is notched to rest on top. Diagonal brace helps result twist. Metal between saw cuts on top of dash frame is bent up to clear steering shaft. The

gears are held with taper pins. A spacer in front of the smaller gear maintains correct tooth mesh. Steering wheel was made by cutting alternate spokes out of a 10" pulley; use a cast-iron, not a die-cast pulley, for this. A piece of rubber tubing in the groove is wrapped with plastic tape to finish the rim.

ratio; I to 4 would be quite fast enough. Mounting the countershafts, These

run in ball-bearing pillow blocks, which are easy to align and come sealed and lubricated for life. Slotted mounting holes in the chassis members allow for adjusting chain tension.

The eight-tooth sprockets come only with

OUT IN HALF & BALL BEARING

SPACER SEAZED

a %" hole, so if %" countershafts are used they will have to be shouldered in a lathe to fit. An alternative is to use 1/2" countershafts, bearings and pullevs.

Align countershaft sprockets carefully with the wheel sprockets. If these are well centered, the chains

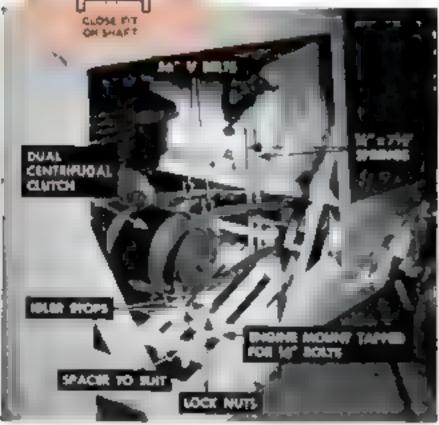

need little slack. But they should not be tight. With the top of the chain taut, the bottom should have X" up-and-down slack.

Installing the engine. Slotted holes in the frame mounts allow for tensioning of the V belts. Align the 8" countershaft pulleys with the fixed cones of the clutch. Adjust the engine fore and aft so that the belts climb just to the outside of the fixed flanges when the sliding ones are at their closest.

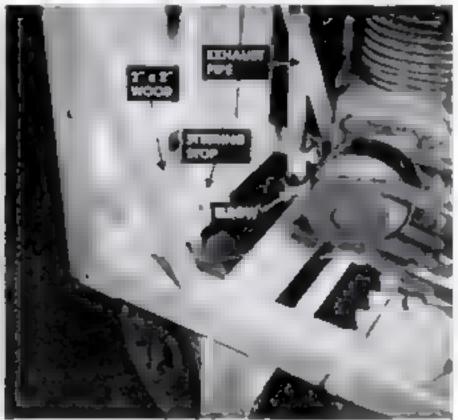

The idlers pivot on a shaft that runs across the frame below one engine mount. They are pulled upward against the outside of the belts by long springs attached to the dash frame. The rollers are ball bearings and must be about "wide to keep the belts from sliding off when they shift sidewise because of the clutch action. You will find that the tension of the idler springs affects the ratio shift; if the clutch goes into "Ingh" as soon as the engine speeds up slightly, idler tension should be increased

With the engine idling, the belts should be stack, so the idler brackets are fitted with stop screws. Adjust these so that the rollers put no tension on the belt when the chitch cones are wide open.

The gas tank was removed from the engine and mounted under the hood of the tractor shown. A new lever was made for the governor spring, with a downward ex-

SPRING-TENSIONED IDLERS keep belts tout as automatic clutch shifts. Stops limit idler movement to let helts go slack as engine runs slow. Idler shaft, centered below front of rear motor mount, enters 14" hole in right of frame. Left end shown is shouldered for %" hole and threaded for a nut. To use engine for sawing wood and the like, centrifugal clutch must be pulled off shaft. Running it with belts off may cause internal damage.

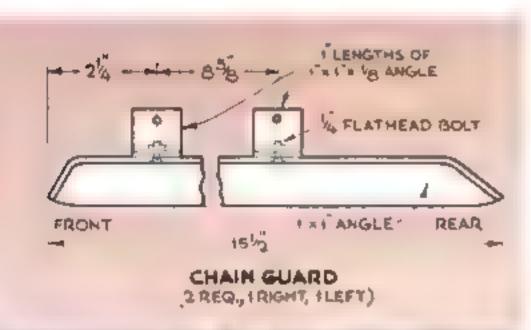

FRONT-WHEEL TURN must be limited because centrifugal clutch cannot stop inner wheel dead. Stop is a 1"-by-3" piece of flat iron bolted to fork shaft, which is tapped for the holt. Swing of 45° each way gives good maneuverability. Exhaust pipe is clamped to frame with a U bolt. Sheet-metal front is screwed to shaped wooden blocks boiled to crosspieces. Block on top, made from a twoby-four, is also shaped for 2" radius of hood.

The dashboard throttle is one made for power mowers and is connected to the governor lever. An auto-choke cable was cut short for the choke control, and a steel wire run to the stop lever on the engine.

The seat. A comfortable motorcycle saddle provides springing and soaks up a lot of engine vibration. It is mounted on a 3' length of %" steel rod welded to the cross-piece of the dash frame and to the top rear member of the chassis. The saddle can be adjusted fore and aft on this.

Building the body. A panel of composition board is bolted to the rear of the chassis. The deck and sidepieces are bent from one piece of light sheet iron. A long slot in the back will let you worry this piece

DASH FRAME also has shaped block holted to it. Dashboard is 3 16 composition board. Deck and sides under the saddle bar are one piece of sheet metal, with narrow flange bent down at rear end to overlap rear panel, and a similar flange at front to slip under the dashboard. Chain guards must be strong enough not to bend and foul chains if stepped on. Make them of angle iron and mount with short brackets cut from the same stock.

around and under the tractor's seat bar.

Pieces of wood rounded to shape are formers for the sheet-metal radiator and hood. I bent the hood metal over a rolling pin to a 2" radius, and rolled the straight edges over a piece of %" iron wire.

Clean all metal parts well; then apply metal primer and two coats of enamel. END

LIST OF MATERIALS

Sounces from which many of the parts specified were obtained are noted below. Where source is not given, parts can be hought from local suppliers or mad-order houses.

A Hole in the Wall Hides

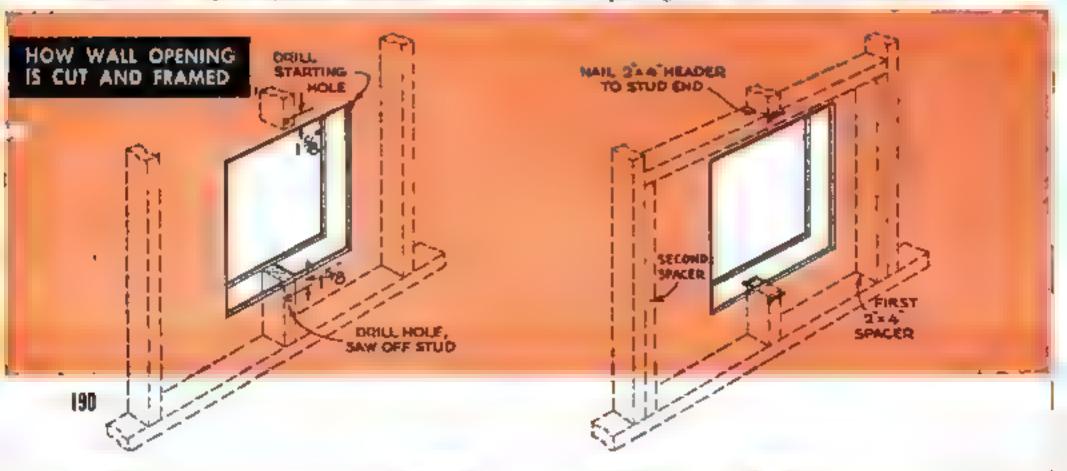

TV SET, viewed from living room at left, protrudes through wall into cellar stairway (above), saving space. Exposing back also provides good ventilation, easy access.

DRILL STARTING HOLE at corner, insert keyhole saw and cut through stud (you may hit two) and both wall faces at same time. Ends of cut stud are then trimmed back 1 \%" (the thickness of a two-by-four) to take frame.

TWO-SY-FOUR SPACER is nailed to adjacent stud on one side of opening, and header is shochomed in to rest on top of spacer. Second spacer is nailed to stud on opposite side of opening to hold other end of header.

My TV Set

An easily framed opening lets a bulky set show only its face inside a room.

Here's how you can build the same thing.

By John N. Michel

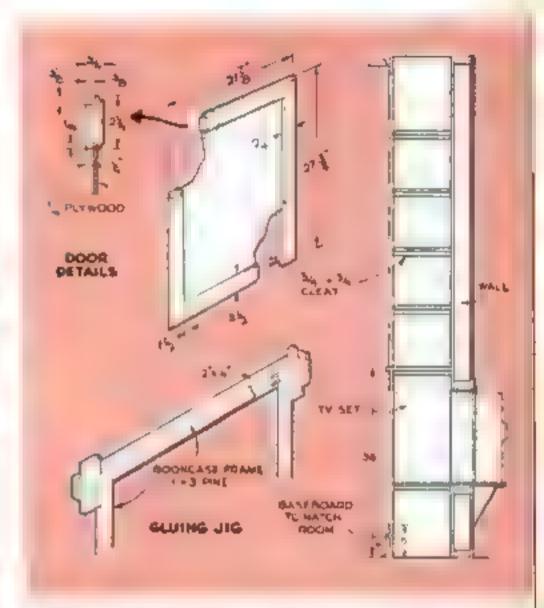

I WANTED to build my TV set into a bookease, but books are only 5" to 8" deep and my set was nearly 24" deep. How to fit in a bulky TV set stumped me until I hit on this idea. By backing the bookease up against the cellar stairwell, I was able to let the back half of the set do a disappearing act through the wall, where it wastes no space and gets in no one's way.

The framing for the wall opening isn't hard to make and can be done anywhere that the set won't show—against a closet, utility room, kitchen pantry, even a wall that simply has another bookease or cabinet on the other side to conceal the set.

For the bookcase, I used 1"-by-12" pine boards for the sidepieces, nailed to the wall. Nailed to these is a front frame made of 1"-by-3" strips, doweled and glued at the corners, with a crosspiece at the point that divides the lower cabinet from the shelves above. The top and bottom of the bookcase are trimmed with molding to match that in the rest of the room

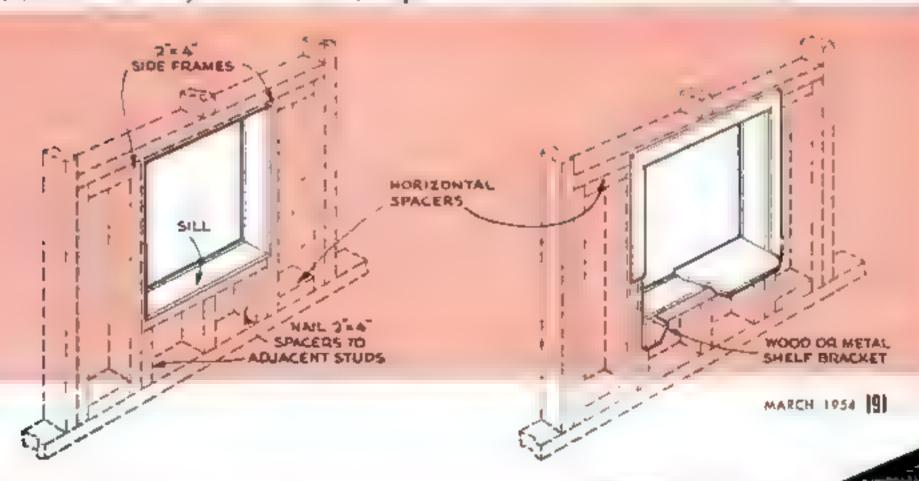

Finished off with one coat of flat white and two coats of white enamel, the result is a fine home entertainment center that takes up little space, yet houses everything needed for hours of leisure enjoyment.

side FRAMES are nailed against horizontal spacers nailed to floor and underside of header on both sides of opening. Two short vertical spacers are then nailed to side frames at bottom and two-by-four sill nailed on top.

SIDES OF SOOKCASE (right, above) make use of stock, mexpensive 1"-hv-12" boards, but dimensions can be varied as desired. Jig for gluing front frame can be made with two-hv-fours and wedges (lower left, above). Doors can be 'r plywood panels set into grooved frames (top left) or smaply plywood panels with decorative molding maded at edges.

OPENING IS TRIMMED with decorative molding, wide enough to cover saw holes made in wall. Short shelf, deep enough to take set's overhang, is nailed to sill and brackets. Opening on bookcase side is also trimmed.

Your youngster will have a fine time with this toy jack, fixing imaginary blowouts on his coaster wagon or pedal car.

A piece of threaded rod, sold in 3' lengths at hardware stores, is the backbone of the jack. Cut off 12" and force it to cut its own threads in an undersize hole in the hard-

wood lifting arm. Drill a %" transverse hole, %" from the top, for the T handle and support the assembly on a piece of two-by-four bored part way through to clear the threads. Twisting the T handle causes the lifting arm to rise on the threaded rod.—A. V Malone, Los Angeles.

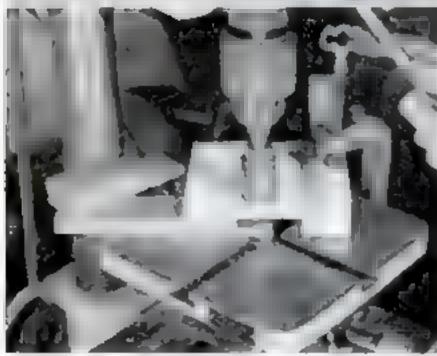

Shim Books Serve as Adjustable Thickness Blocks in Shop

Strucks of hardboard about 12" wide, cut and stacked like steps and pivoted on one end can serve many purposes in a shop.

Several strips can be combined as a shinor block for spacing out cleats (below right), leveling work in a drill press (below left) or wedging work together when gluing

Make several sets, from 3", 3, 16" and 3" stock—so that all or part of each book adds up to multiples of those thicknesses. A nail cut and peened over a washer serves as the pivot. Walter E. Burton, Akron, Olno

New Accessories for Your Car

1. Exhaust Extension Muffles, Too. Packed with glass fiber, this decorative tail-pipe extension takes some of the blast out of exhaust systems using straight-through mufflers. It also cuts noise in standard mufflers. Installation requires cutting off several inches of tailpipe so the extension won't protrude beyond the bumper.

2. Hose Flushes Radiator. This special radiator cap connects to an ordinary garden hose so you can flush the radiator with water pressure when you drain the winter antifreeze. The lower radiator hose is first disconnected or the drain cock opened, then the water is turned on and the pressure gradually increased until it flows rapidly through the tubes.

4. COs Cylinder Fights Fires, Fills Tires. A spring clip that can be bolted to the firewall or side panel under the dash of your car holds this dual-purpose, carbon dioxidefilled cylinder ready for quick action for extinguishing a fire or inflating a leaky tire. A short length of rubber hose with a threaded connector to fit a tube valve is included for quick attachment to the tire. The cylinder comes fully charged, and when exhausted can be returned to the manufacturer for refilling.

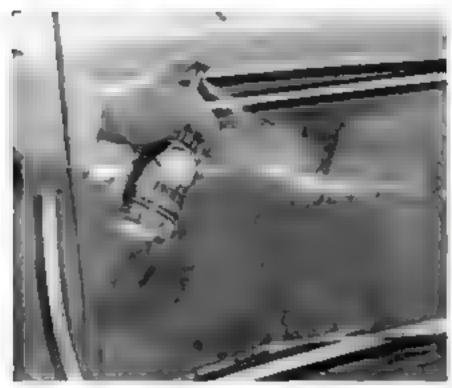

3. Anti-Rattlers Stop Window Noise. Windows that rattle in loose or worn window channels can be steaded and silenced with these metal clips. They are pressed into the channel with the window lowered; raising the window forces them in snugly. Small curved springs in the clips bear against the window edge, yet permit it to slide up and down freely.

Please turn the page for more auto accessories.

More Auto Accessories

5. Liquid Melts ice, Stops Fog. This liquid added to your automatic windshield washer or sprayed on by hand will quickly melt ice so that it can be cleared off by the wipers. The chemical can also be used on the inside of the windshield and windows to prevent fogging of glass. Just spray it on and wipe it dry.

6. Plastic Cuts Sun Glare. Pasted on the inside of your windshield, this coloredplastic strip is said to do the job of the tinted glass in new cars. The strip is cut to the correct shape, the glass moistened and the plastic pressed on. When all air bubbles have been squeezed out, it lies flat and sticks on.

7. Brake Linings Clamp On. These linings can be quickly clamped to brake shoes with an inexpensive crimping tool, saving the time and work of a bonding job. Bent metal tabs hold the linings on.

9. Chrome Trim Hides Nicks. Snap this flexible chrome trum over nicked door edges or gutter molding to conceal chipped paint, scratches and rust that tend to form at these vulnerable spots. The strip has a plastic lining. No screws or adhesives are needed to install it.

8. Squeegee-Scraper. Practically anything that forms on
your windshield can
be removed with this
double-purpose tool.
One side of the blade
is hard plastic for
scraping snow or ice.
The other side is a
soft-rubber squeegee
for quickly clearing
off inside fog and outside dirt streaks.

Vacuum Motor Powers Edger

Salvage the power unit from an old upright cleaner and you can build a handy lawn trimmer.

By John Rogers

YOU can trim your lawn without trimming your budget with this inexpensive homemade edger. You take the motor from an old upright vacuum cleaner, add a blade and a handle, and you have a powerful electric trimmer that will quickly cut a razor edge along walks and curbs, saving hours of backbreaking hand clipping. Parts cost less than \$10, even if you have to buy the motor, and the result is comparable to commercial edgers costing \$60 and up.

Old vacuum-cleaner motors are ideal for the job because they're small, light, turn at a high r.p.m., and offer a ready-made hous-

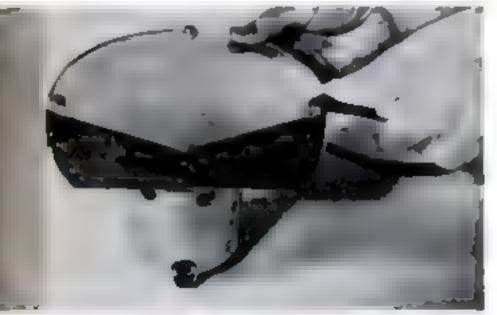

CLITTING EDGE

WHEELS can be 2" rubber casters or original ones on vacuum cleaner if they are about this size. Cotter pins hold wheels on 14" axle.

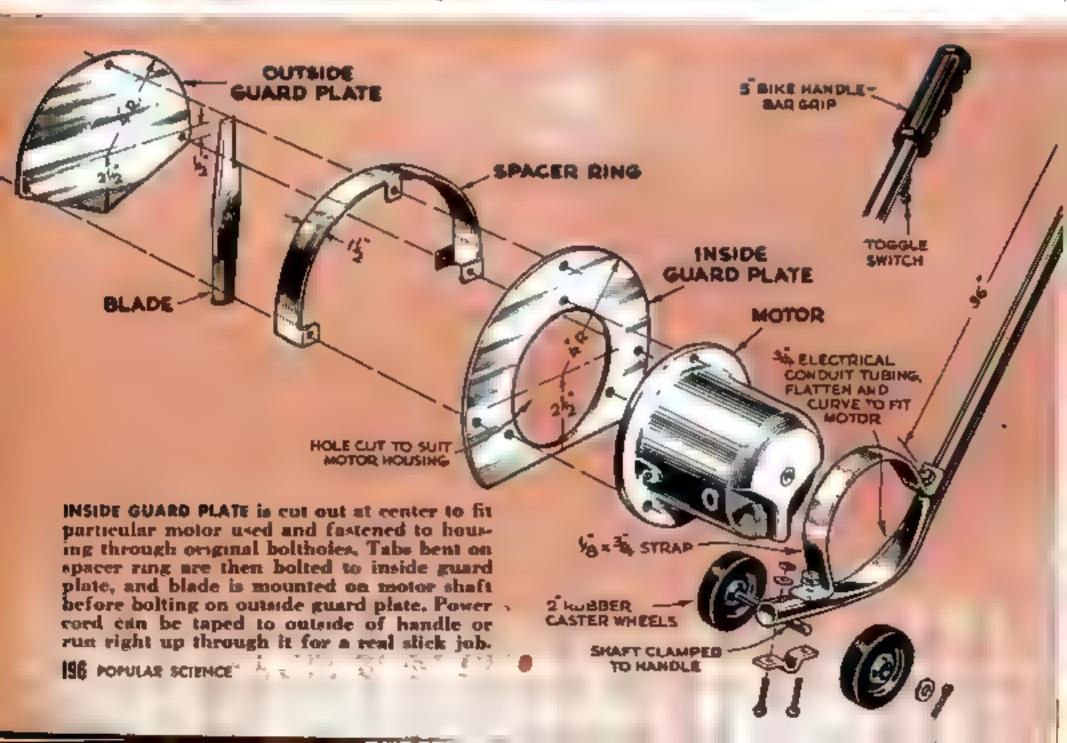

CUTTING BLADE is \$4" cold-rolled steel with edges ground on side facing motor only. Two nuts bolt blade to shaft, one on either side.

QUARO PLATES are bolted to either side of spacer ring with 8-32 machine screws. Place nuts on the outside on both sides of guard.

ing to which the handle and blade assembly can be easily attached. If you don't have one gathering dust in the cellar, you can pick up a good rebuilt motor from a cleanerrepair shop for a few dollars.

The guard for the cutting blade can be made of .064" aluminum sheet, shaped as shown, and bolted directly to the motor housing. The power leads are wired to a toggle switch on the handle and terminate in a plug so an extension cord can be used to run the edger, then detached for other uses. When using the trimmer, take care to keep the blade away from obstructions and yourself away from the blade.

What You Can Do with Aluminum Insulation

Here are some uses you may find around your home or shop for this reflective material.

WASTERASKET, left, was covered with aluminum menlation cemented in place. An old lampshade can be made to look brighter than ever, as shown at right.

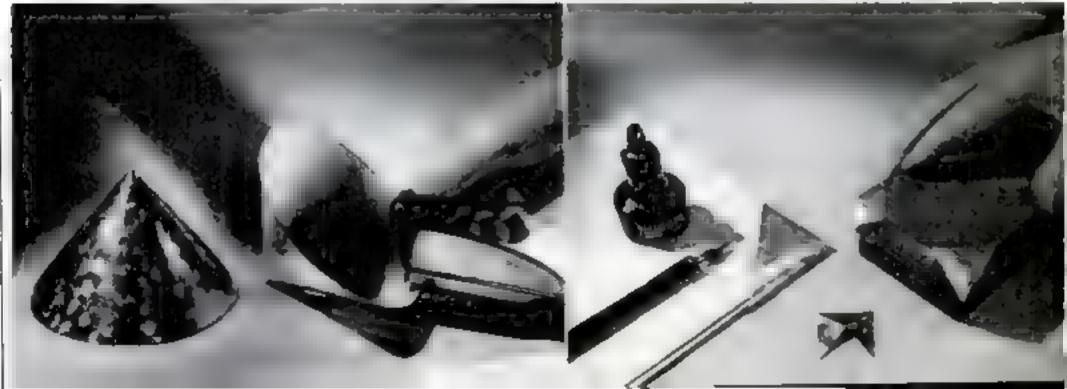

HOUSE NUMBERS and name plates are easy to cut with ordinary shears. Cement the cutouts in place. The material is moistureproof.

WIND WHIRLERS itsed to trees or other supports in the garden or lawn will scare away bird pests. Tape holds the tie cord on-

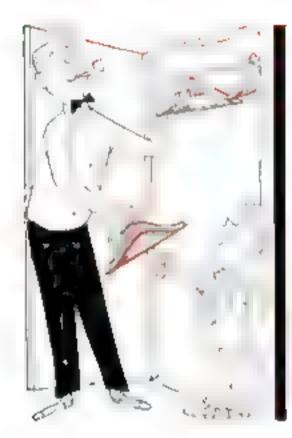

HOT CAPS for promoting the growth of young garden plants can be made by shaping insulation into cones and stapling edges.

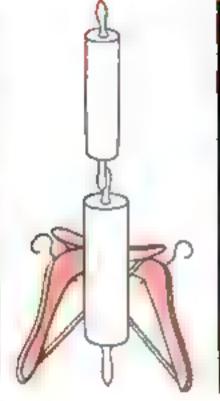

THIS DESK PAD in heavy cardboard with insulation tabs at corners to hold blotter. Bright corners decorate the gift box at right.

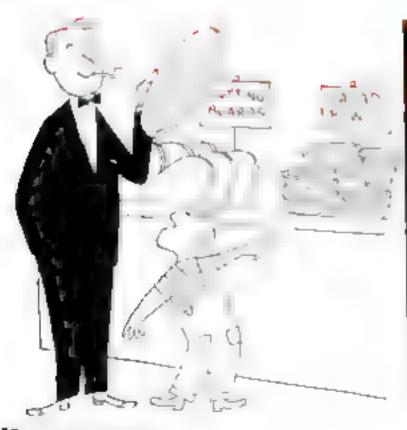

Wordless Workshop

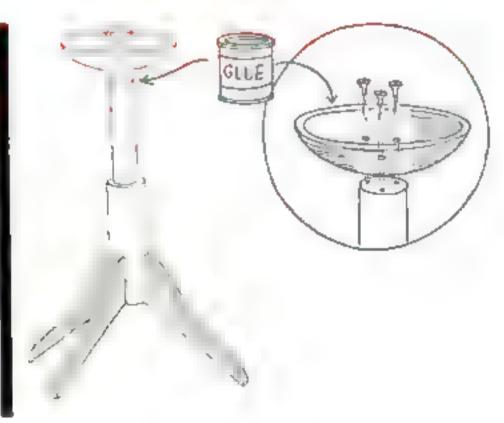

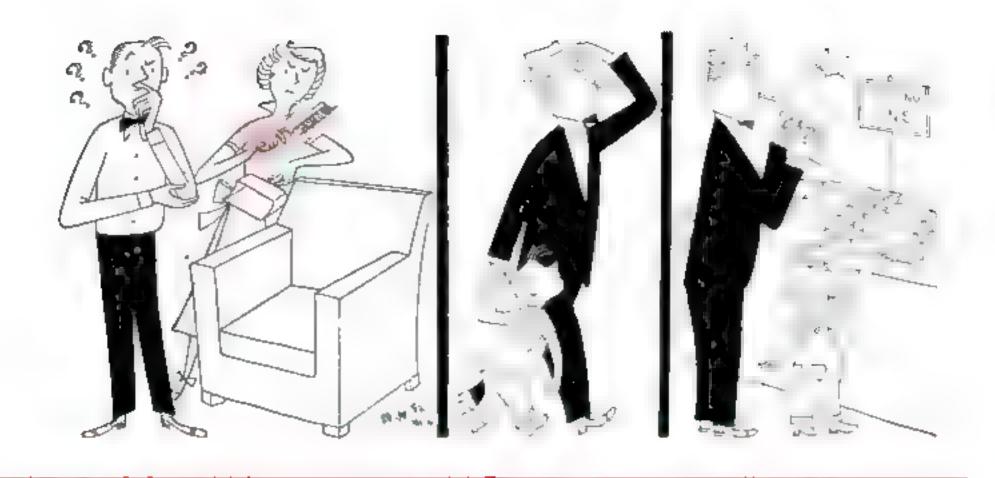

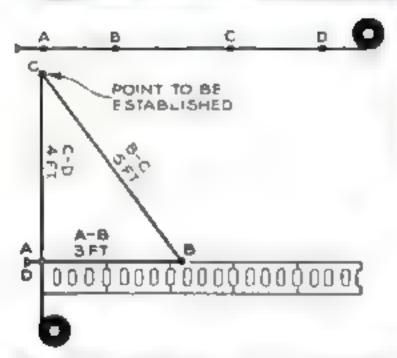

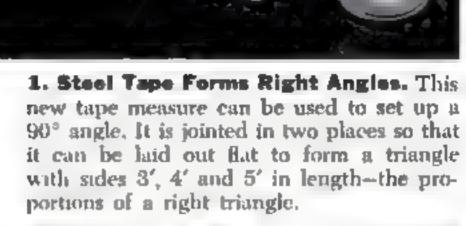

X New Tools

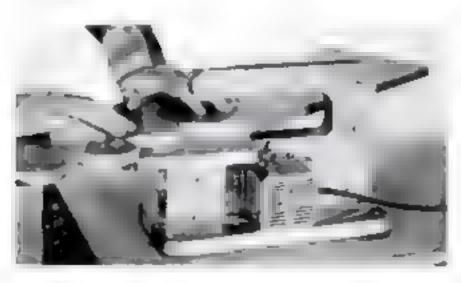

2. No Spreading Chestnut Tree? With this table-top forge shop, the village blacksmith could have packed most of his smithy into less than eight square feet of floor space.

It includes a forge with electric blower, a machinist's vise, drill press, grinder, 3" shear and a set of hand tools. A %-hp, electric motor powers the drill press, blower and grinder. Since the forge uses smokeless smithing charcoal, the shop can be used in the cellar.

3. Straight-Line Sander Swirls Too. For semifinishing, this sander has an orbital action that cuts fast. For fine finishing work where no swirl marks should show, you can switch to a reciprocating straight-line action. There is a separate sanding plate for each type. Paper is changed by a push-button method.

4. Tool Fastens Guy Wire. With this serving tool, a guy wire can be wrapped around itself to form a neat, strong deadend without clamps.

5. Built-in Motor Rocks Jigsaw. This new jigsaw has a rocker action that provides power on both the upstroke and downstroke. This, says the maker, eliminates the buckle and whip and resulting blade breakage caused by the tension-spring return of conventional jigsaws. The table tilts to 45°, also raises and lowers. A four-way blade holder permits cutting in different directions.

Further information on these products can be obtained from: 1 Justin Roe & Sons, Inc., Patchague, N. Y., 2 Champion Blower and Farge Co. Lancas et Pa., 3. Farechild Industries, 110 Main St., Burlington, Vt.; 4. Copperweld Steel Co., Glassport, Pa.; 5. Dremni Mig. Co., 2420 18th St., Racine, Wis.

Fit-On Top Expands Card Table to Seat Eight People

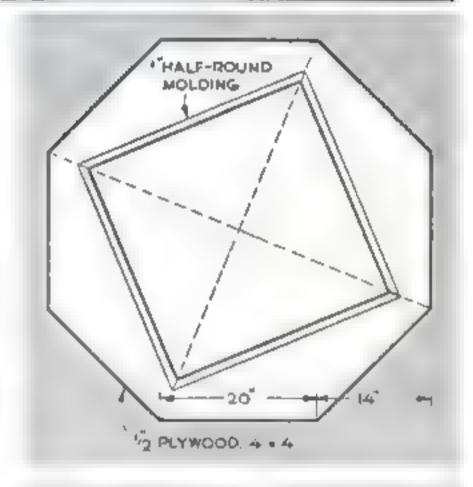

Bring this auxiliary table top out of a closet when guests arrive and you'll be able to seat as many as eight people at an ordinary card table. And even though it doubles the card table's capacity, the top provides leg and elbow room for everyone with its octagonal shape.

The octagon is made by cutting the four corners off a 4'-by-4' square of X" plywood A frame goes on the underside to fit easily over the card table. Use four pieces of 1" half round and glue and nail them on.

Sand the octagon smooth and finish with one coat of plywood sealer and two coats of clear varnish.—Howard G. McEntee, Ridgewood, N. 1.

Bicycle Pulls Box Trailer

Loads too big for a handle-bar basket can be easily carried in this bike trailer built by a neighbor of mine. The wheels, which came from a tricycle, are mounted on a simple axle that runs through the angle-iron base frame on which the boxlike body is built. The swan-neck handle, a length of curved %" pipe, bolts into a light iron channel on the front of the box. A snap, welded to the other end of the handle, fastens to a bolt held in a heavy iron U welded to the frame of the bicycle.—E. V. Reyner, Townsend, Mont.

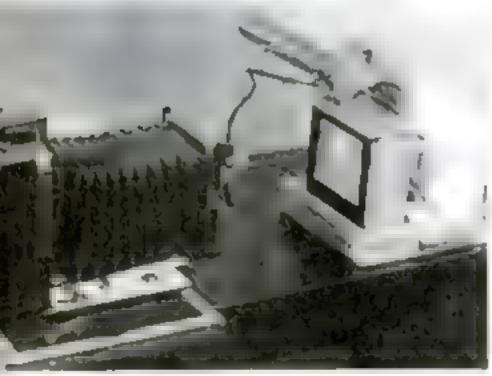

How to Mug a Fish

This homemade tank does for fish what the old-fashioned photographer's head clamp did for wriggly little boys.

FISH-MUGGING TANK is enclosed in a box cut away so that front, back and sides are open for picture taking. Rounded tin replaces reflector on flash gun to throw light down into tank. Press 40 buibs are used with high-speed film, lens opened one stop wider than usual.

BACKGROUND of picture below is plaster-of-Paris block, dressed up with a few shells.

By David B. Grant

A TROPICAL fish may not be able to emote like Bette Davis, but to an enthusuastic fish fancier like myself he still makes a mighty pretty picture. The trouble is that fish are camera-shy. When I rigged my camera to shoot my fish in their 15-gallon tank, they'd stay out of range for liours and then not come near the glass on which I was focused.

My new rig, however, holds a fish right up in front of the camera where it can't get away. It's a special photography tank built out of a plastic refrigerator dish. I scaled the cover on with melted paraffin, set the dish on end, and cut a big rectangle out of the new top.

The tank is small enough so that the fish is in camera range most of the time. But to make it even easier, I slide in a glass partition that keeps the fish in the front half of the tank. This slants back at the bottom, giving the fish room to maneuver and turn around

The flash gun is mounted on a wire rack above the tank. I use a light or dark background to contrast with the coloring of the fish I want to shoot. Before taking the picture, I make sure the fish is in proper focus by sighting on a pencil pushed down into the water.

For a handsome wall surface that's simple to put up and easy to take care of . . .

Panel It with Wood

By Darrell Huff

WOOD paneling gives you a lot of wall for little work. Stock paneling in a variety of styles costs little more than a good grade of wallpaper and goes up nearly as fast. Or you can buy plain boards and mill them yourself for special effects.

Either way, the result is a warm, rugged, luxurious wall surface that takes little maintenance. Reasonably cared for, it will last for many, many years.

A little wood goes a long way, so you

get a lot of effect without breaking the bank. A single paneled wall will set off an entire room and can probably be had for a weekend's work and a \$20 bill. Paneling a damp, dreary basement or an unused attic will transform waste space into usable, pleasant living areas. The effects shown here can be duplicated with materials ranging in price from eight to 25 cents a square foot.

What kind of wood? Any softwood is a good choice. If you're going to paint it, one will do as well as another. But for stain or

Special Effects You Can Make with Plain Boards

GAP JOINT is clean, modern, looks equally good run vertically or horizontally (helow). Boards are subbeted on both edges with the cabbet on one side made twice as wide as that on other (above). Lapping narrow rabbet over wide one leaves gap.

SHIPLAP JOINT gives interesting, unusual effect, can be made with inexpensive clapboard or tap siding that comes already tapered and rabbeted (above). Boards are face-nailed where they overlap (below), are best used vertically to avoid clapboard look.

INEXPENSIVE PANELING is ordinary knotty pine. Its rustic appearance helps hide defects. Using some wood for high-ins gives rich look, makes use of scrap normally wasted.

natural finishes, the color and grain of the wood become important.

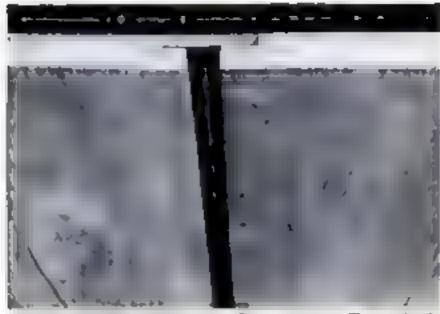

Typical of the light-colored woods used for paneling are the pines and spruces and white fir. Douglas fir is a bit darker. Dark est of the softwoods commonly used for paneling are redwood and the cedars.

Some woods are offered in knotty or pecky grades. In most, the appearance will depend on how much you want to pay. Clear grades may cost several times as much as grades having knots and other defects.

Among these woods, pine is the all-time, all-over favorite and is among the least expensive in the East. Redwood, cheap in the

204 POPULAR SCIENCE

and Ordinary Siding

BACK-BATTEN JOINT produces gap effect similar to joint at far left, but edges are all cabbeted same width. First board is nailed in place, then separate backing strip is slipped in behind cabbet (below), and next board is nailed through strip to wall.

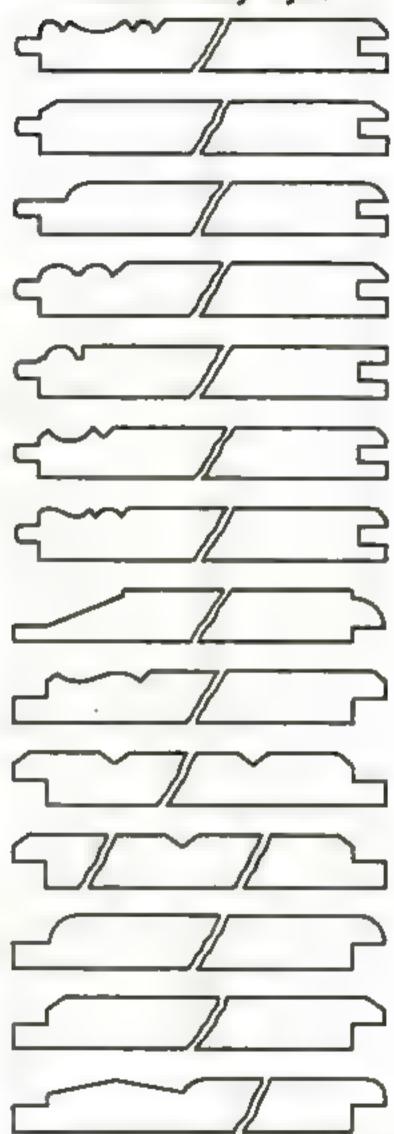

West, has worked its way to popularity everywhere. It is especially favored in modern houses.

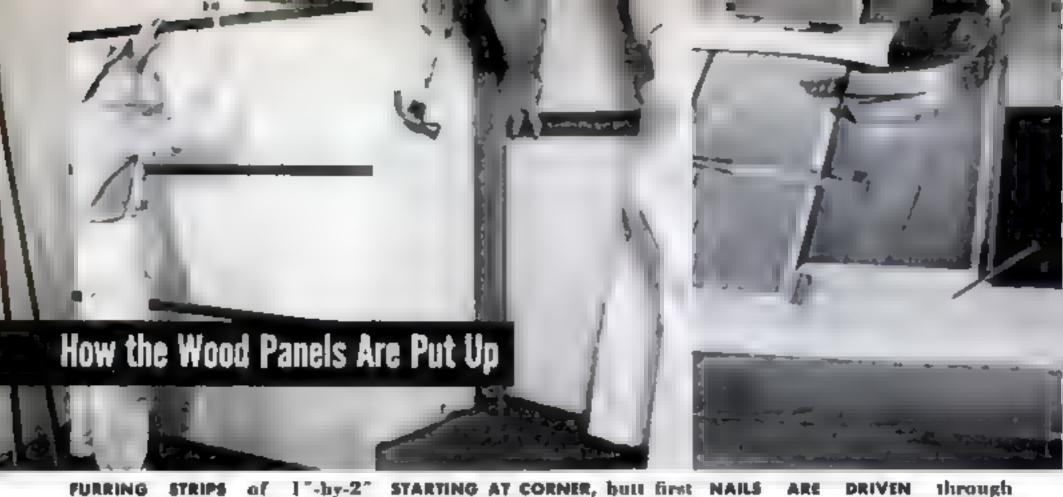

There is currently one exception to the rule that hardwoods come high. That is Philippine mahogany. It may cost little more than fine grades of softwoods. With a clear-lacquer finish, it has a luxurious cumamon shade.

What joint? Simplest and most popular is a V joint produced by beveled edges. This gives a pleasant pattern and has the advantage of concealing slight slips in workmanship or shrinkage of the boards. V-joint lumber may be either tongue-and-groove or

Ready-Made Paneling Comes in Many Styles

PANEL PATTERNS above are some of available stock designs. Top seven have tongue-and-groove joints. Bottom types are usually cheaper, but require face-nading at the edges.

FURRING STRIPS of 1"-hy-2" lumber are first nailed to stude through existing wall. Place one strip at ceiling, one at 2' apart in between.

board against wall, tongue cealed way shown at right.

tongue into furring strips at side out, and face-nail rear about 45° angle. Use five-penny edge to strips. Tongue edge is finishing nails; if wood splits, floor, and space others about then nailed to strips in con-switch to four-penny. Groove on next board will hide heads.

shipkap, the latter usually having a broader and deeper bevel.

The advantage of tongue-and-groove paneling is that it interlocks at the edges, concealing nailheads and requiring nailing on only one side of each board. Most other joints require face-nailing and some of them. nailing along both edges of each board. If you pick one of these, you'll have to countersink your natheads and cover them with a matching filler so they won't show.

Tongue-and-groove lumber is also produced with no bevel and gives a plain, flush wall. Some teg has a bevel on just one side, permitting its use either way. Other joints are shown in the photos and drawings.

Horizontal or vertical? Most paneling is put on vertically, as this eliminates end joints and also avoids the dust-catching characteristics of horizontal joints. Horizontal paneling, however, often makes a room look larger and can also be nailed directly to studs, eliminating furring strips.

V joints are used with most horizontal paneling. Other types of joints are likely to give a barnlike effect or to catch too much dust. If you have a good eve for line, you may find a wall that will look striking when paneled diagonally. This treatment may also be just the thing to add strength if that is needed.

You can buy it or make it. If you can find ready-made paneling to suit your needs. there is no great saving in buying plain boards and jointing them. But if you can't

find what you want and have power tools, you may save a good deal by shaping the paneling yourself instead of having it milled to order. A good example of paneling that can't be bought is the back-battened redwood shown in the photos.

Trim is a simple matter with a woodpaneled wall. For horizontal puneling, it usually consists simply of matching quarter-round molding nailed at the ceiling and floor. On vertical paneling, however, the grooves form little pockets at the floor that eatch dust. One way to solve this is by first nailing on a narrow baseboard-like strip at the floor line and butting the bottom ends of the boards against it. Quarterround molding can then be nailed at the ceiling and bottom of the baseboard. Or you can use the molding alone if you fill the pockets with a matching wood filler.

Furring strips. These are narrow lengths of lumber, usually one by-twes, that are nailed up first to provide a nailing surface in turn for the paneling. You'll need them for all vertical paneling and for horizontal paneling over a masonry wall,

The photos show how the furring is put up, but if you use a baseboard, remember to add an extra strip just above the one at the floor so the bottom ends of the boards will fall on it. In horizontal paneling, make sure all end joints meet at studs and stagger them so they fall on different ones. You can find the studs, usually 16" apart, by tapping the wall and drilling test holes.

will damage tongue. Use mail set on last 34", and counteraink heads slightly so tongue will slip easily into groove.

PONT TRY to drive nails all the BOARDS ARE TAPPED into place way with hammer alone or it to insure a tight, even fit. Scrap piece of paneling slips over board to be nailed and permits hammering without danuaging delicate tongue.

WARPED SOARDS that are hard to fit can be pried in place with this lever setup, Wrecking bar, exerted against block clamped to furring strip, holds board while it's nailed.

Finishing. Perhaps the best-looking finish for fine woods is more at all, as they mellow with age and take on their own handsome hues. But this is possible only for areas out of reach of cooking fumes. coal or other dust, dampness, and small, smudgy fingers-especially small, smudgy fingers.

Next best thing for a natural look is water-clear lacquer, brushed on in two coats. Clear wood sealers, white shellac, and flat varnish also give natural finishes.

For results lighter in color than the natural wood, a white-pigment sealer can be used. This is brushed on, allowed to penetrate for a few minutes, then gently wiped with a soft cloth. A little raw umber or other pigment may be added to the white sealer for a variation in tint.

For drastic bleaching, commercial wood bleach should be used. Light bleaching can

FLOOR BECOMES WALL in this unusual use of ordinary suftwood flooring. Narrow t&g strips are economical, give jointless effect, but take more work because of greater nailing-

SINGLE PANELED WALL, combined with painted surfaces, creates striking effect with only a lattle wood. Here, absence of molding and baschoard looks modern, accentuates height-

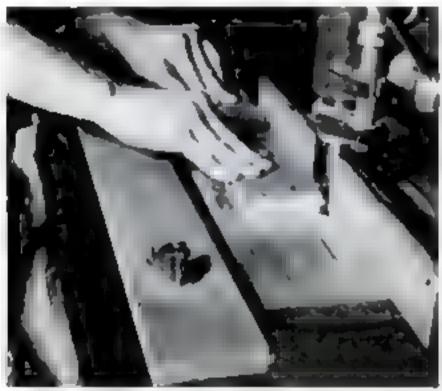

HORIZONTAL PANELING makes room look longer, is easier to but up since boards can be nailed to stude, saving furring strips. Avoid fancy joints that may give wild effect.

DADO BLACE in carcular saw is easy way to make shiplap joints. Set blade about 142" wide, rabbet one edge, then flop board over and rabbet other edge on opposite side.

SHAPER CUTTERS will quickly cut tongues and grooves on boards in single pass of blade. Edges can also be shaped on circular saw with dado blade or cutters in molding head.

ON MASONRY WALLS, furring strips can often be fastened on with ordinary stale. If not, try steel-cut nails or glue-on wall unchors. Punching is then nailed on in the usual way. be done with household bleaches—Clorox, Purex, etc. Also used to bleach is a saturated solution of oxalic-acid crystals in boiling water. Apply it hot, let dry, and remove any bloom that appears with alcohol. Then sandpaper and finish with one coat of clear lacquer, buffed lightly with fine steel wool.

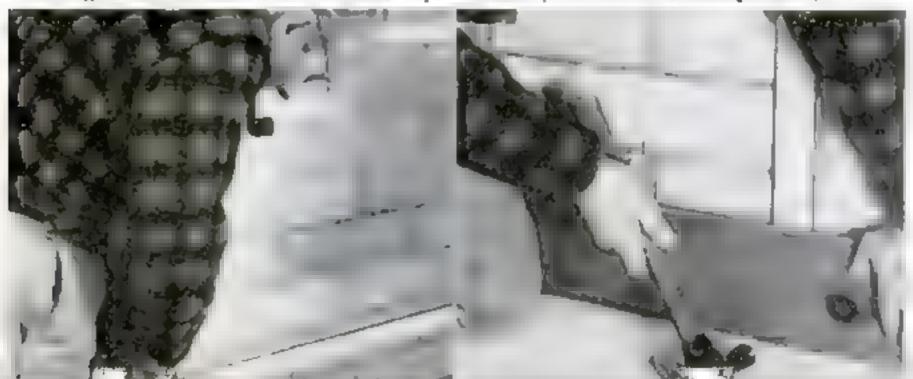

You can add color. Any paint store offers a stock of standard wood stains that can be used to add color to paneling. Stain may be fullowed by a protective coat of shellac, lacquer or flat varnish. There are many attractive one-coat sealer stains, such as Color Rez. For color with the soft glow of wax, use Cabot's Stain Wax, which comes in a variety of soft shades.

You can make up finishes in any shade you can imagine by mixing colors-in-oil with a suitable carrier. For transparent effects, mix the color with boiled linseed oil and thin with turpentine. For a softer and more opaque result—especially good if the wood has too violent a grain—mix the color with enamel undercoat and thin with linseed oil.

For finishes of this type, the color can be just about anything you like. Most usual is one of the brown pigments with just a little ultramarine blue. Protect it with white shellac, lacquer, or flat varnish, plus wax.

When to finish is almost as important as how. The general rule for any two-coat finish is to apply the first coat before putting the paneling up. This gets the finish into the joints where otherwise a streak of raw wood might show up if the boards shrink or move. It also protects the wood from finger marks during installation. The second and any other coats can then be applied after the paneling job is completed. For more suggestions on finishes, see PSM for April '53, page 212.

HORIZONTAL PANELING over masonry requires vertical strips. If wall shows dampness, backprime boards before installing. If moisture (a serious, wail must be waterproofed, too.

To re-cover chair arms without redoing the whole chair, swipe the fabric from the ouder-side of the seat cushion or the rear of the chair back where a replacement of new, but blending, material will be less conspicuous.

A hammer holster hanging from your belt will keep the tool in reach when you're doing carpentry jobs. One like this can be bent from a 24" piece of No. 9 steel wire, or from a stiff coat hanger Form a wire rectangle about 14" by 2" in size to hold the hammer head.

New for the Handy-Man Painter

1. Self-Sealing Paper Preserves Brushes. It's a snap to seal up a clean brush with a new kind of paper. It is coated with latex, which sticks only to itself. You just wrap up the brush and press the edges of the sheet together. The paper is also useful for storing small parts, and for protecting precision tools in the process of shipment.

2. Two-Headed Tool Cleans Rollers. The sickle-shaped scraper on this new tool strips the paint from a roller; the other end is used to brush the paint out of the fibers. Since the bristles of the brush are nylon, which doesn't soften in water, it is said to be especially effective in the removal of water-thinned paints.

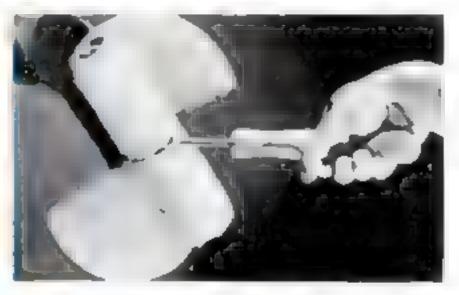

4. Pistol Grip Holds
Can and Brush. You
can hold paint can
and brush with one
hand with this new
holder. The pistol
grip fastens to the can
with a steel band,
while a clip holds the
brush out of the paint.

Further information on these products can be obtained from:

1. Sherman Paper Products Curp., 1480 Oak St., Acuton Upper Falls 64, Mais.; 2 Wisconsin Laboratories, Inc., Dogs man, Wis.; 3, Fond Du Lac Roller Curp. Fond Du Lac Wis.

4. Shister Products Co., 350 S. Sanford St., Pontine, Mich; 5. Superior Painter Tools, Inc., Fond Du Lac, Wis.

3. Balanced Roller Has T Head. The handle of this new paint roller divides the head into halves that rotate separately. Thus, says the maker, minimizes roller skid, spreads paint evenly, and provides better balance and uniform cover wear. Built for professional painters, the roller comes in 8", 11" and 14" widths.

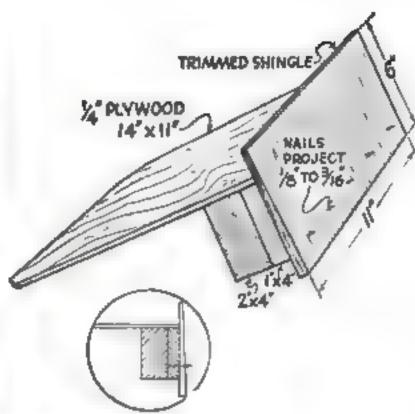

5. Roller Clips to Brush.

Combining paintbrush and roller, as this clip-on roller permits, makes an exterior job go faster. The brush is dipped into the paint as usual, but instead of excess paint being squeezed off into the bucket, it is brushed di-

rectly on, then rolled out to normal thickness. The roller is reversible, as shown, to allow painting clapboard edges or trim with brush alone. It can be clamped on any 3", 3%" or 4" brush.

Push-On Shelf Holds Your Shingles Within Easy Reach

This easily made shelf keeps shingles right at your elbow as you work—and you can move it along the house wall with you. The top edge of the shelf base fits up under

the overbanging "lip" of the top course of shingles on a double-coursed wall. The bottom is held by several projecting nail points that are pushed into the wood.

Sharpener Cuts Long Points

A SHARPENER for putting long points on drafting pencils can be made from the ordinary pocket type. Put a conventionally sharpened pencil into the cutter and mark the blade where lead meets wood (left above). Then file away the blade edge to the mark. The blade then shaves only the wood: the lead passes through for as long a point as wanted (right above).—John and Ro Capatosto, Long Island City, N. Y.

Empty Tubes Sink Fishlines

Usen-up tooth-paste and shaving-cream tubes are a good source of wrap-around sinkers for fishermen. Cut 'em up with scissors.—Harry Allison, Jackson, Mich.

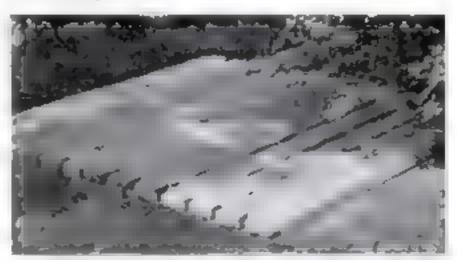

Use Pliers to Groove Dowels

To MAKE glue-escape grooves in a dowel, just squeeze it within the large popening of slip-joint pliers. If several squeezes are needed, make sure the grooves line up.—Louis La Rue, Seattle, Wash.

Strip-Slab Cover Lifts Easily

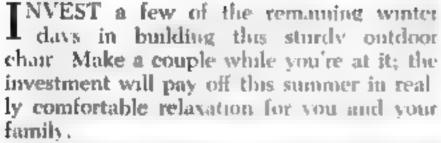

A PIT or cesspool cover made of narrow strips of reinforced concrete can be easily lifted off piecemeal. The 7' slabs shown are 3½" by 6" in section. Each is strengthened by three full-length ¾" steel rods. The slabs are covered with topsoil planted to grass. Only one strip need be cleared and lifted off to inspect the pit.—Russel S. Dart, Middle Haddam, Conn.

Parts cut from full-size patterns go together easily when you build this big

Folding Chair for Summer Leisure

By Leonard Cronk

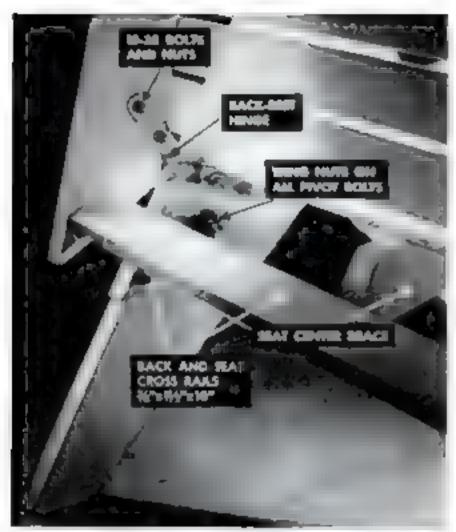

Unlike the ordinary folding chair, this one is roomy and solid enough to lounge in for hours. Yet when weather threatens it can be quickly folded flat and stored in a small space. When left outdoors, the back alone can be folded down to keep dust off the seat.

To make full-size patterns, rule a large sheet of heavy paper into 1" squares. On this, draw the parts shown in the drawing on a following page.

Cut all parts except the slats from 1" clear pine (about %" actual) or %" plywood Cut a %" rabbet for the slats along one in-

LEGS PIVOT on 1, " bolts when wing nuts are loosened. The back folds down on the seat.

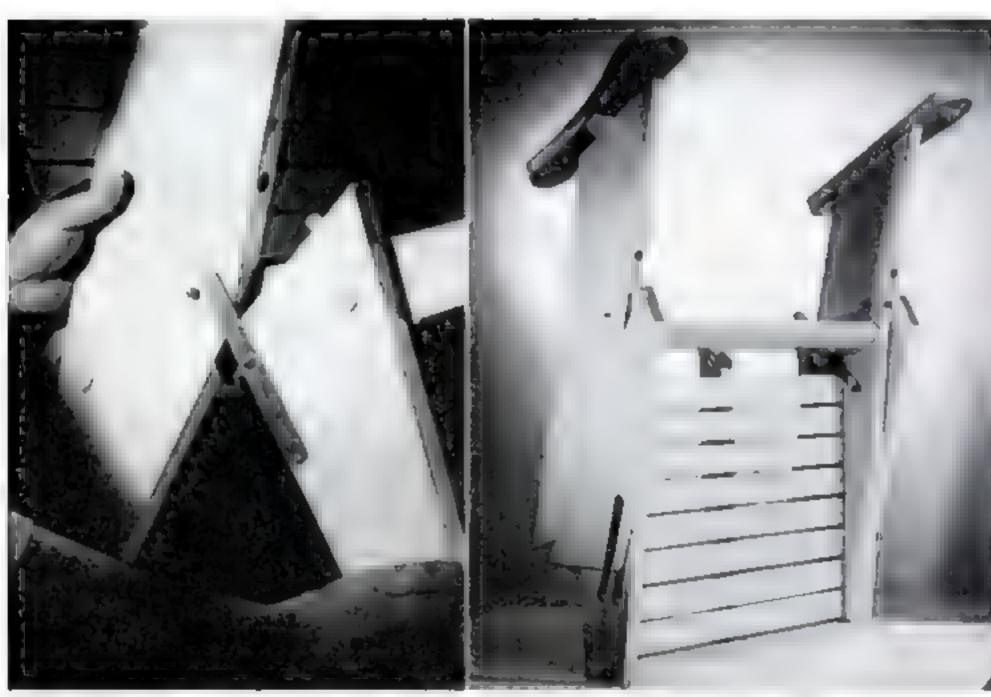

HINGES, made from 1/16" brass, join back rest to seat, Because of strain on lunges, they are bolted to side rails instead of screwed. Above, chair is partly folded to show hinge.

side edge of the side rails of the seat and back rest. Also cut a rabbet in the tapered end of these pieces for the front seat rail and top back-rest rail. Cut slats from K" pine or plywood and screw them in place with oval-head brass wood screws.

Drill %" pivot holes in the legs and mount them on the seat to check alignment and fit of the meeting edges. Mark the centerline of the holes for the locking dowels and remove the legs for drilling. Glue a short %" dowel into the hole in each front leg, reassemble with wing nuts on the pivot bolts.

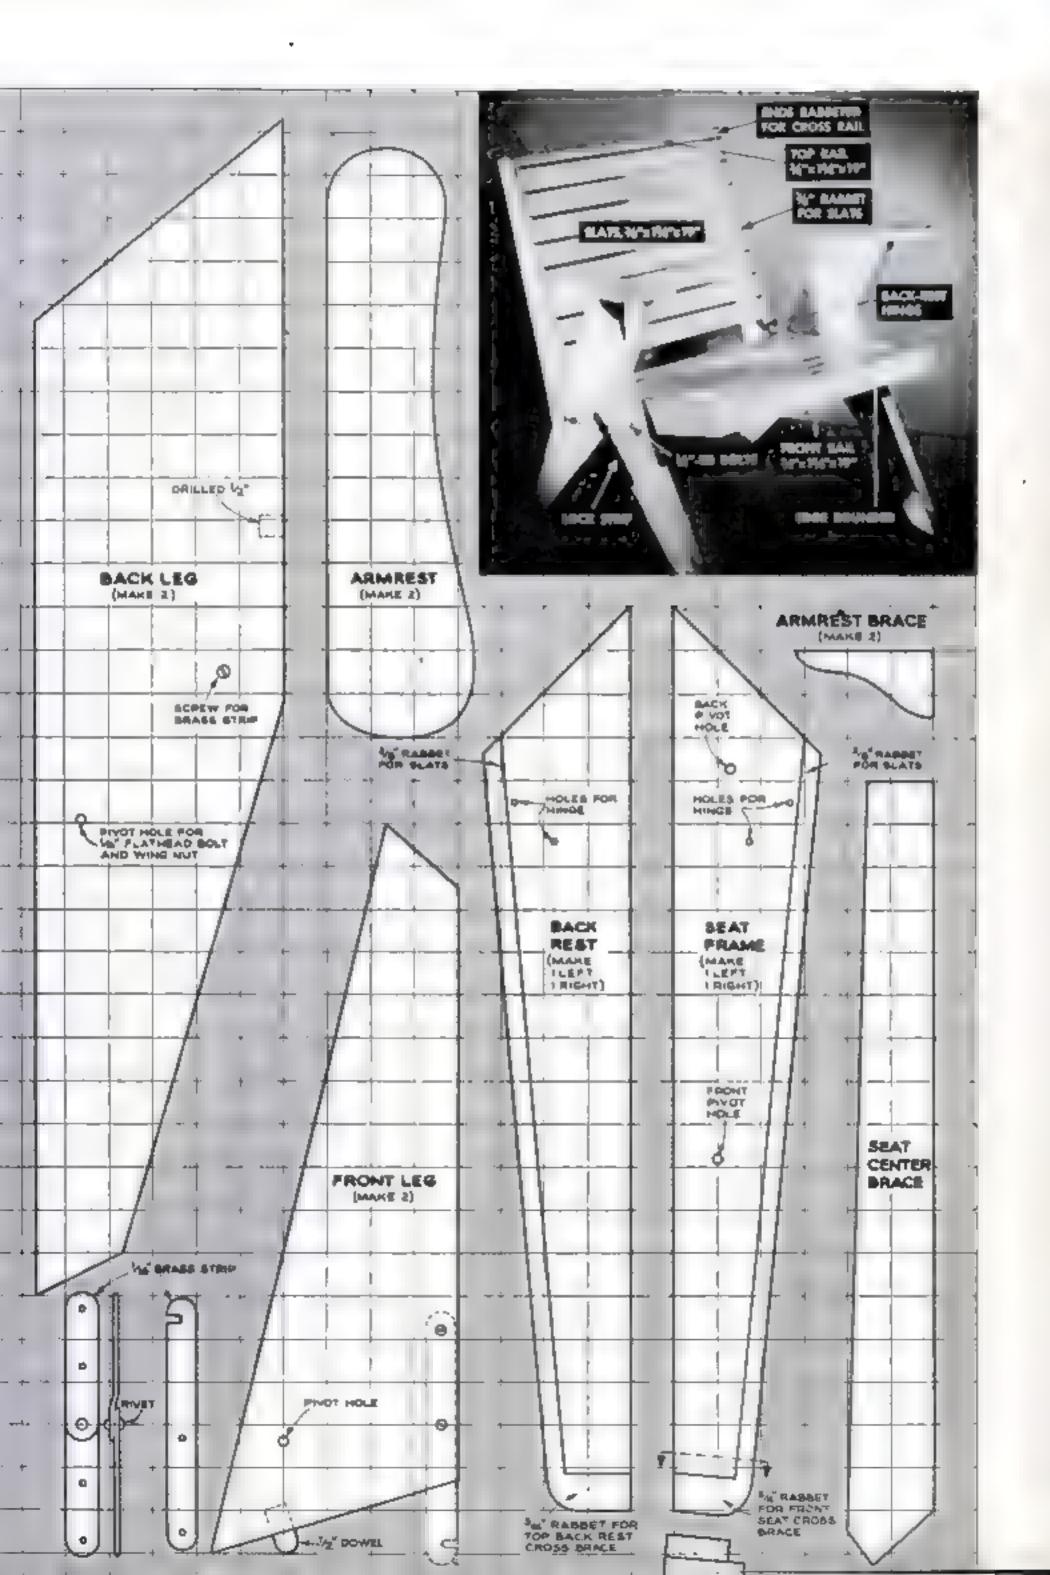

Screw the locking stnps, cut from 1/16" brass, to the front legs and drive the eatch screw part way into each back leg. Bolt the back-rest hinge, also made from 1/16" brass, to the seat and back rest while holding their beveled ends in alignment. Add the armrests and braces and sand all parts smooth.

Finish the chair natural with clear varnish, or coat with enamel over one or two coats of wood sealer or shellac. To get all parts covered, take the chair apart.

BRASS LOCKS make legs secure when chair is open. Shot engages screw driven part way into back leg. A dowel in the front leg fits into a hole in back leg to key them.

FOLDED, chair can be stored in little space. Note centerbrace under seat slats to keep them from sagging. The brace is acrewed to the front and back cross rails.

How Does a Magnet Work?

Here's a good use for your old razor blades: simple tests that disclose the magnet's secrets.

SOME 700 years ago, a man named Peter was burning with curiosity—curiosity about loadstones, the queer rocks that mysteriously gripped pieces of iron that came near them. Peter fashioned a big chunk of loadstone into a globe, and set it afloat in a

rowboat. The skiff slowly swung around by itself until one particular point on the stone

-Peter called it a "pole"—faced north.

Peter gave the bow of the boat a push, swinging it around. It swung right back again. As he wrote to a friend: "If this pole were then turned away a thousand times, a thousand times would it return to its place by the will of God."

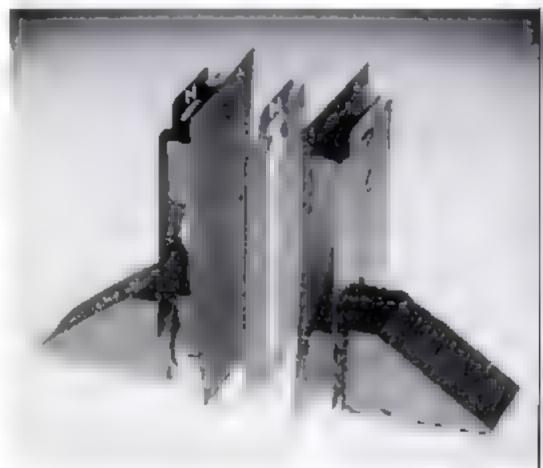

For centuries, our knowledge of the laws of magnets, which medieval scholar Peter Peregnnus explored, has paid dividends. It made the compass possible—and the discovery of America. It is the basis for the design of electric motors and generators. Without magnets, our present age of power might never have arrived.

You can learn a lot about magnets and their poles right at home. And for your experiments you don't need Peter's load-stone—just a few old razor blades. The finest hard steel, they make good magnets. (Soft steel magnetizes more easily but quickly loses its magnetic properties.)

Ruzor blades can easily be magnetized by holding one end against an end of either a permanent magnet or electromagnet. As shown above, an electromagnet can be made by coiling wire around a spike and connecting the ends to a battery. Start your experiment by magnetizing three fazor blades. Use the same end of the magnet for all three blades and dab paint on the end of the blade that touches the magnet, so that you can identify it.

Cardboard shields are now attached to each of the two outer blades with pieces of gum or clay. (First remagnetize all blades.) Repeat the first experiment as shown above. The middle blade still stands alone, despite the shields. This shows that the cardboard permits lines of magnetic force to pass through it freely. The same experiment could be done with shields of glass, wood or paper—or any other nonmagnetic material.

Thumbtack two of your blades to little blocks of wood. Make sure both blades have the marked ends up. These ends have become similar magnetic poles by touching the same end of the electromagnet. Stand the third blade between them, also with marked end up. It will stand maided, merely sway if you blow gently against it. This is because similar poles repel each other, so the center blade gets an equal push from each side. (Unlike poles attract each other, as

you'll find if you try the experiment after turning down the marked end of one of the outer blades.)

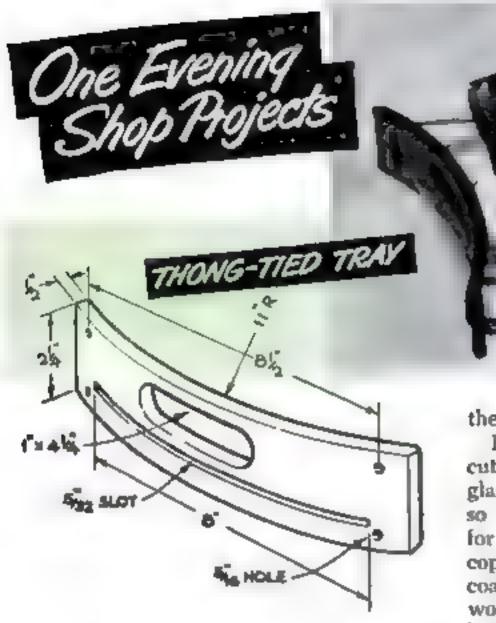

Now, as shown at the right above, bring a lighted match near one outer blade. The middle one will tip slowly toward the flame. Since heat destroys magnetism, the outer blade nearest the flame loses its power to repel the center one.

PRM PHOTOS BY DRUANDO QUERRA

Fill a glass with water and carefully slide one of your magnetized blades onto the surface. Thanks to surface tension, it will float, gradually turning until it comes to rest. Check the direction. You'll find one end is pointing north. This is the north pole of the magnet; the other, naturally, is the south pole. Twist the glass as you like, the north pole of the magnet will always head toward the north. You have made a simple compass.

Break up one of the magnetized blades. Bring one end of one of the other magnets near the pieces, and you'll find that each piece acts as an individual magnet, attracted at one end, repelled at the other. Arrange the pieces with unlike poles next each other and a whole group of fragments will cling together as shown above. No matter how small the fragments of a magnet, each one will have its own north and south poles.

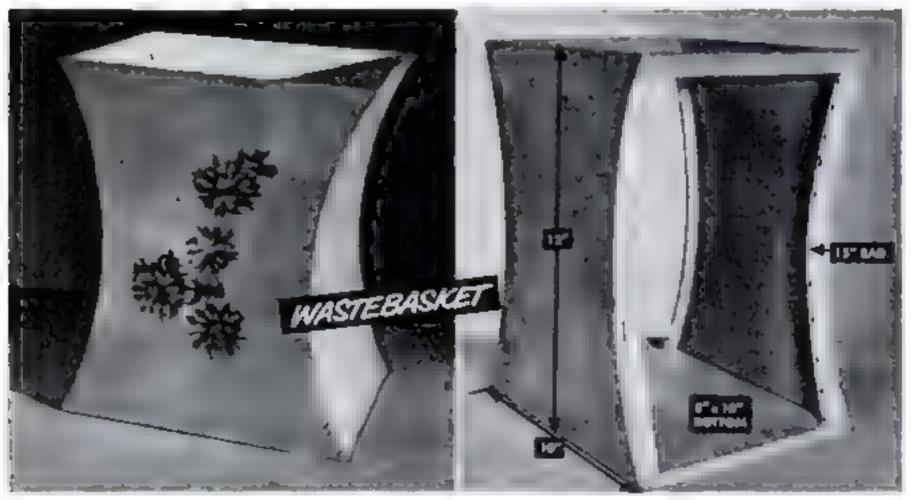

Leather thongs are the only fastenings used in this serving tray. Grooves in the two walnut or other hardwood endpieces fit over a piece of plate glass. The thongs keep

the ends snug in place against the glass.

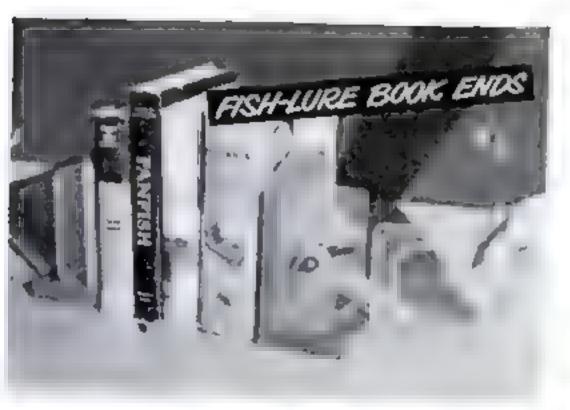

Bandsaw the ends to an 11" radius and cut a groove in each the thickness of the glass and about k" shorter than its width—so the glass can't go through. Bore holes for the straps and cut the handholes with a coping saw. Sand smooth and apply two coats of thin shelkie. Rub with fine steel wool when dry and varnish to protect handles from liquids being served.

Have the edges of the glass ground when it is cut to size. Assemble the tray with two 50" lengths of 5/16" leather tied in bow-knots.—Benf. Nielsen, Aurora, Nebr.

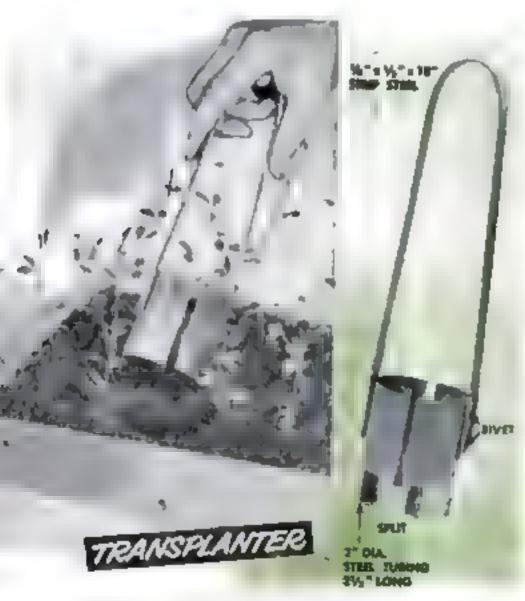

Scraps of linoleum, plywood and wall-paper are easy to turn into a colorful waste-basket. Nail two plywood sides to an 8"-by-10" bottom. Glue and brad strips of wood along the curved edges and across the upper

corners. Bend the linoleum to the curve of the sides and tack it to the wood strips. Cover the wastebasket with wallpaper or enamel and apply decals.—Richard Mandle, Pompton Lakes, N. J.

Fishing plugs are used to decorate these book ends for a sportsman's den. Glue them in plastic refrigerator-storage boxes obtained from a dime store. Cement on the box covers to keep children's fingers off the hooks. Mount the boxes on bases made of scrap wood stained or shellacked.—Clifton Morris, Lubbock, Tex.

Early seedlings can be transplanted from starting flats without disturbing the roots if you use this tool, made from steel tubing and strip. Bend the strip and rivet the ends to the tubing. Split the tubing into two halves, file the bottom edges sharp and apply a coat of enamel.—T. K. Hastings, Los Angeles.

USEFUL AS A CUTTING BOARD too, this easily made block will be gratefully received by the head of the kitchen.

NAIL OAK PLOORING to both sides of two pieces of 2"-by-6"-by-12" pine to make block 12" square.

PLANE TONGUE AND GROOVE OFF outer pieces; cut ends flush with core. Sand smooth, and finish with lineeed oil.

ADD SCREW EVE to hang block on wall. Chop foods across grain. W. H. Mc-Clay, Pasadena, Calif.

1. Jane was busy at the kitchen counter when Joe came home. He was delighted at the sight of two cartons on the table, "Good! My oscilloscope kit's come." But he frowned as he saw that one box was open, its contents strewn wide, the instruction manual propped up before Jane as she did things with a radio chassis. "Hey! Why'd you unpack my kit?"

Jane calmly tightened a screw. "This is not your kit," she explained. "It's the high-fidelity amplifier you're always too busy to make. You told Eddie Wilson he could build one from a kit without knowing electronics, and get fine music from his records and FM radio. He did, too, and it worked. So I ordered the same kit, and I'm going to build us one."

How a Kit Becomes a Hi-Fi Amplifier

Electronics was Joe's hobby, but when Jane wanted good music she ordered packaged parts and learned to use a soldering Iron.

Picture story by Hubert Luckett

NOWADAYS, bank clerks and doctors, beloop fans and housewives build their own high-grade electronic units. Kits are planned to keep the beginner out of trouble. Anyone can put together an FM tuner or a high-fidelity amplifier. Directions that come with the kits cover every step, pictorial diagrams show each connection as it ought to look.

The picture story that begins on this page is fiction based on facts. It describes how two kits purchased from the Heath Company of Benton Harbor, Mich., were assembled

Professionals as well as amateurs use such kits. Many Heathkit oscilloscopes, signal tracers and vacuum-tube voltmeters rest on service-shop benches. Training schools, labs and universities also use apparatus assembled from such kits

2. "Low're going to baid of granded for printed as ket Know what voice ding?" I thek I do note to be a granted I at Williamson-type circuit is no crested set Denti sking to fought when you give up I vigit my oscilloscope to put together.

ter. Go ahead and build vibre 11 square less ope. What I want is a chance to hear good music

t. "You're on." Joe agreed, looking into the pot. "Minni—this smells wonderful. Save the questions till we eat." But Jane 1 dd ap two classis. "Why did they send me three of these? I ordered only one amplifier." Beluetantly Joe put the aid back

supply. It's made separate severe or count it away from the rest of the right of some on the William Diebig classis is viewed to work a lond speaker. Now will you set the table?

3. "But at least 1 ddte knew how to solder k as no won to wood a demanded for for the party and Norma when appears to sold the property and the could manage with the retriger of a Bot of the could manage with the party and a total the could manage with the party and a total traces of the party and a total traces

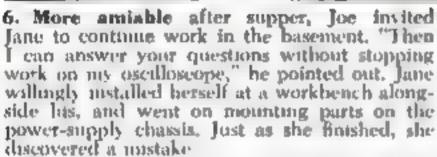

questions that do any work on devo. I had be alle to find your sense beef stay.

5. Jane land out supper, "That third chassis loc went on, houses the preamphiler, which boosts signal voltage It has all the controls on it, and von get a long connecting end so you can put it opposit a an armchair for real lieviest and it von like S parate on a suke that are zood design encutives and easier to wire that one long chasses. And now let's eat."

But once the first keen et a was off his hit car for divided his attention between the stew and his oscilloscop manual, while Jane real the districtions for her kit.

"I put on one socket with the keyway facing out," she said. "Do you think I'll have to change it?" Checking the instructions, Joe found that they called for both sockets to be mounted with

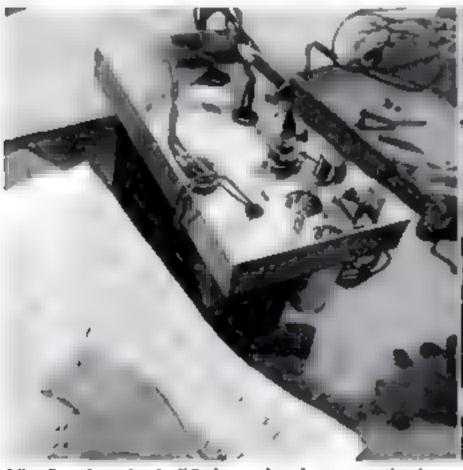

the keyways facing inward.

7. "Better turn it," Joe advised "It's only a minute's work. You see, the positioning of each part is planned for easy wiring. Besides, if you stick to the directions, every wire will look us it does in the preture diagram. But if you start with one sor! a grand around, the wires will run differently and you may get mixed up."

Jane saw the point. She took off the socket and remount dift properly. But her confidence took a diveas she studied the wiring diagrams closely for the first time.

"Oh no!" she ex. ' med "Do I have to hook up a separate wire wherever there's a line?"

10. Joe laughed. "Only as hard as you think. It's really easier than fastening a wire under a screw. With that clean, newly tunned from you shouldn't have any trouble. Twist each wire around its terminal so that it's tight even without solder. Did you read the paragraph on soldering inside the back cover of the manual? If not, it's worth doing."

Jane admitted sac hadn't. While the iron was heating, she took time to do so.

11. Holding the iron a bit awkwardly against the ground hug of a tube socket, around which she had twisted a transformer lead, she touched solder to the lug. A blob flowed on, merged with wire and hug. Hastily, Jane took the tron away. The solder hardened, and she pulled the wire to see if it held. "Look!" she said delightedly. "It works!"

Joe checked the joint, "Yes, it's okay. But try not to get on so much solder the next time."

8. "Yeah, but relax," Joe told her "Stop looking at all three wiring sheets at once." He punced up the one of the power supply "Fachhue is a connection, But you only make one at a time. So don't get seared.

"In the instructions, a separate paragraph for each one tells you where the ware comes from, where it goes and what to do. If there's an 5 in parantleses, you solder the joint. If there's 1) NS, that means 'no solder,' because another wire has to go there first, Why, there's even a place to check off each connection as you make it. You can't miss with this job."

9. "Then I'm ready to start wiring," said Jane, "Look, I did remember to buy solder, so that I wouldn't have to take yours." Proudly she held up a spool, but Joe reached for his own, "Yeah, only you got neid-core solder. That's okay for mechanical work, but poison on radio and electric wiring. The guarantee is void if you use anything but rosin-core radio solder like this. I'll cut some off for you."

Jane took the solder and an electric soldering from "I wonder if the girls were just trying to encourage me," she said dubiously. "Is solder-

ing really pretty hard to do?"

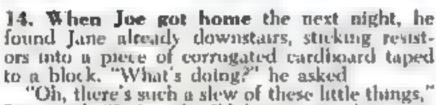

12. Pleased to find she could solder. Jane made joint after joint But the last one stumped her, "Now what?" she complained "The solder won't melt, or it goes where I don't want it"

In one quick glance Joe diagnosed the trouble. "You've had the iron hot a long time. The trp is oxidized. It needs a shiny coating of solder to work properly." Jane sighed, "I thought it was mel How much are these trops, and how many of them will I need to buy?" 13. Chuckling, Joe took the from from her and hled the tip bright. "You just clean and re-tin that one," he said After rubhing a fresh coat of solder on the tip, he made a joint on the oscilloscope to demonstrate.

"See how I hold the iron, like a dagger? It's less tiring and gives you better control that way. Now go ahead," But Jane was tired, "Let's call it a night. Tomorrow we'll start early, and I'll bring down sandwiches for supper."

"Oh, there's such a slew of these little things," Jane said, "I thought I'd better sort them out. I didn't know what the colored lines meant at first, but this code in the manual explains it. They tell how many ohms each one has."

Joe laughed, "That cardboard stunt is pretty slick. Think I'll use it myself from now on. It sure beats poking into a jackstraw pile of resistors to pick out the right one"

15. After mounting the main-amplifier parts, Jane knocked off to go upstairs for coffee and sandwiches. Jummy, the three-year-old, was allowed to stay up past his bedtime for the occasion, which he thought pretty special

"I almost forgot to tell you," said Jane, "This is our bridge might with the Wilsons." Joe groaned "I'd rather work on my oscilloscope. Can't we beg off?" With a self-satisfied grin, Jane shook her head. "Don't have to. I told them what we were doing, so they agreed to pass up bridge and visit with us down here in the basement while we keep working."

dered the last joint, shook out all loose solder and wire, and put in the tubes. Joe hooked a mysterious box and his oscilloscope to the amplifier. Switching it on, Jane waited teosely for the usual warmup time. But there was only silence and a seesaw of green lines on the oscilloscope. Her spirits hit bottom.

"Your gadget works, but mine doesn't," she whispered. Joe first looked puzzled, then laughed.

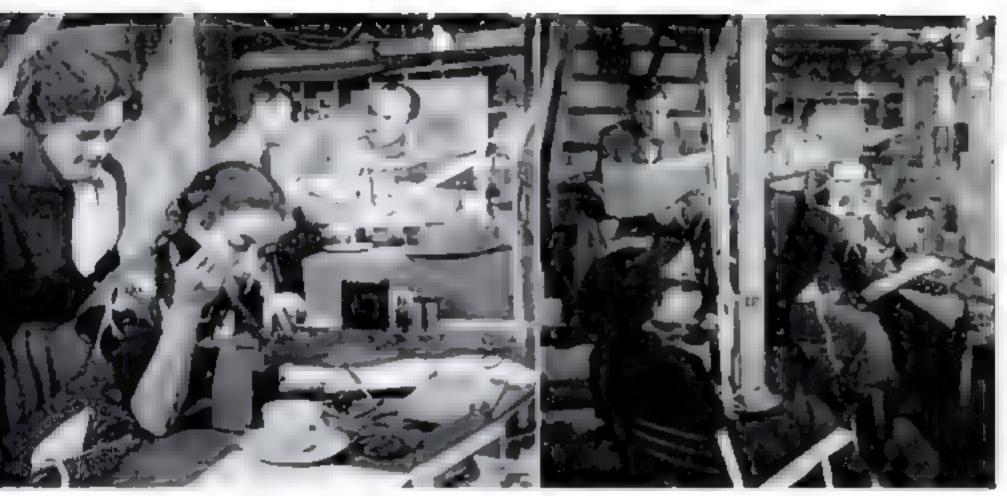

"Oh, because you don't hear anything? But we're feeding the scope, not a speaker. Your rig is amplifying a square wave, the toughest test for an amplifier Many that sound good won't show a recognizable square pattern.

"But yours—well, just look at that scope pattern—the top and bottom lines horizontal, corners square and sharp. Among other things, that means flat response—all frequencies are amplified equally. Of course, you can favor highs or lows with the tone control."

"So what?" protested Jane. "I don't want to see squiggles on a

tube. I want music!"

224 POPULAR SCIENCE

16. Shortly after eight, the Wilsons let themselves in and came downstairs. Eddie headed for Joe's workbench. "That oscilloscope looks mighty professional," he remarked. "I'll give you all my radio and TV repair work!"

Doris was more interested in Jane's doings, and plainly impressed. "However do you know what all these gadgets and wires do?" she asked.

"I don't," answered Jane. "But then, I don't know what chemical changes go on m the cake dough after I slip it into the oven either. All I do is follow the recipe, whether it's for a cake or a high-fidelity amplifier." 17. Joe yelled for the soldering iron then, so Jane put astde the main chassis and birned to the preamplifier, which she had partly assembled that day. Wiring up the tmy sockets was finicky, but deft fingers and a businessike squint did it. "How long will it take you altogether?" asked Doris.

"She'd better hurry," put in Joe. "When my scope is done, I want to use it to find out just how good that amplifier of hers is."

Jane took up the challenge. "You're on And I'll bet you a steak for supper it won't have taken me more than 12 hours in all."

19. Late as it was, they carried the amplifier upstairs and hooked it to a record player and speaker. Beethoven's Ninth Symphony came sharp and clear, with thrilling high notes Jane had never heard before, and deep, stirring bass passages. From her chair she could adjust tone and volume. "That recipe really came off," she murmured.

"Sounds mighty good," admitted Joe. "Now

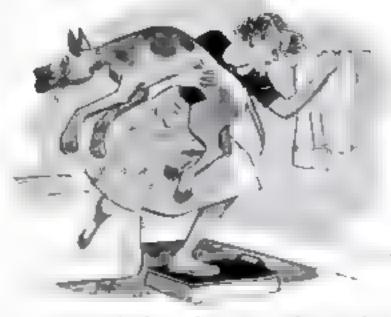

there is an amplifier that deserves a really good speaker and a proper enclosure for it."

Jane was delighted. "I'm so glad you are taking an interest in home music at last," she said. "When will you build those?"

said, "When will you build those?"

Joe thought fast, "I've got to make a few changes in my scope. Tell you what though—you come downstairs tomorrow night and I'll show you how to run the circular saw . . . " END

What Would You Do?

The vet had my dog on a reducing diet. My job was to weigh him from time to time and report to the vet. In the first place, Rover wouldn't stand still on the scale. This caused the needle to piggle so you couldn't get an accurate reading. And then he would make a leaping take-off from the scale.

But I weighed him anyway. I simply picked him up and stepped on the scale. Then I weighed myself and deducted my weight, leaving the dog's poundage.—

Mrs. Henry Josephs, Gardeneille, Pa.

Kids Safe in No-Handle Car

WHEN I bought a four-door sedan, I removed the inside rear door handles, sawed them off and put back the stubs. The young-sters can't open the doors, but adults can reach through the window. I bought two extra handles for use when I trade in the car.—G. E. McCahey, Providence.

Rack Sorts Old and New Jigsaw

It's easy to find your jigsaw blades if you keep them in a small rack of glass test tubes like this. The tubes, available at any drugstore, fit in angled holes drilled in a base block and are labeled according to each blade number and use. A small hole

Coating Aids Blade Sharpening

RESHARPENING plane and chisel blades will be easier if you first coat the cutting edges with layout blue or black stove polish. The coloring will insure even sharpening, show up any low spots and eliminate overgrinding. A pipe cleaner is a good brush.—Ken Murray, Colon, Mich.

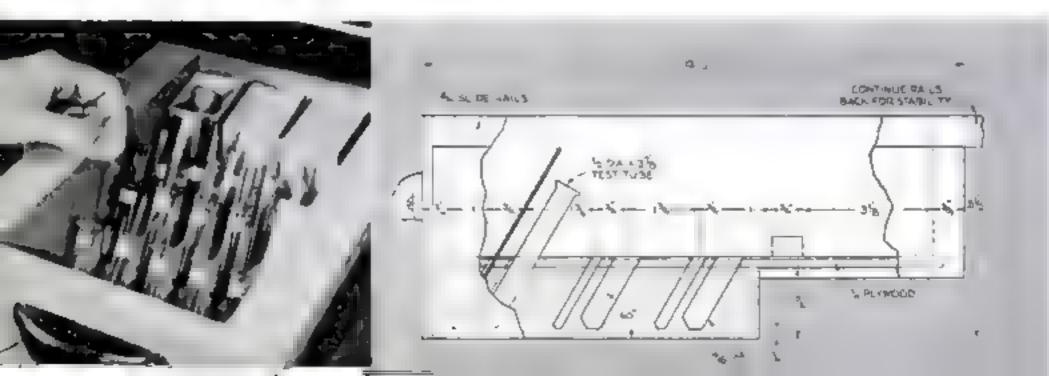

Screwdriver is Scoring Knife

An our or broken screwdriver, cut down to a stub and ground to a keen edge, will make a ringged and accurate scoring kmfe. The sturdy handle is easier to grip than a penknife, and you don't have to worry about dulling or nicking a good blade on the steel straightedge.-Charles Smith, Jacksonville. Fla.

Blades in Numbered Test Tubes

near each tube holds the blade currently in use apart from the new ones. Spacing of the holes is shown in the sketch, and you can make the block wide and deep enough to take as many rows of tubes as you like.—
Karl Greif, Vestal, N. Y.

when he rubbed his magic lamp. They'll be dusting a branch of some thrifty old plant with a sheet of specially treated plastic. Then, presto! The branch will grow into a brand-new shrub or tree.

Of course there is more to this magic than meets the eye. Grandma will probably sniff when you tell her about it, and say, "Sounds to me like a new-fangled version of pot lavering."

The little lady will be 100-percent right For "air layering," as the process is called is only a stepped-up version of a gimmick she used half a century ago to do a recap job on her rubber plant.

When its shiny leaves reached for the ceiling, Grandma grabbed her pruning knife and cut a number of notches in the bark. just below the thick growth at the top of the plant. Into each notch she slipped a pebble, to hold the bark away from the greenish cambium laver beneath it.

Then she got out a special flower pot the one with a vertical slot cut through its side and halfway across the bottom, Grandma slipped the pot right over the stem, where it formed a cup around the wounds. and tied it firmly in place.

Next step was to fill the pot with loose earth, and water this loam sparingly for days and weeks on end. Eventually, a heavy rootmass sprouted from the notches. At this point, Grandma severed the stem right below the flower pot, and had herself a brandnew, well-formed rubber plant.

Chinese Knew the Trick, Too

Although Grandma didn't know it, Aladdm's cousins had practiced the same form of surgery in the Imperial Chinese Gardens more than a thousand years before. They used grains of rice to hold the bark away from the cambrum layer, and preferred straw to earth as a moistening agent

But all the fuss and bother of carefully controlled watering discouraged widespread use of "pot" or "Chinese" layering. That was too bad, because the method has two big points in its favor.

One is the fact that any form of rooting

WOUNDING STEM by notching be girdling is first step. Wound is then scraped clean and a small quantity of root-inducing powder—a plant hormone—inserted into it.

—and this is strictly a rooting operation—produces a plant that bears blossoms or fruit identical in every way to those on the parent plant.

Hardiest Limb Is Chosen

The second point is important too. While the only commercially practical kind of rooting, until recently, called for a branch to be bent into a shallow trench in the ground, some shrubs and most trees do not lend themselves to this treatment. Their branches are either too brittle or too high. But with pot or Chinese layering you can pick the hardiest limb for rooting, no matter where it happens to fork from the main stem of the plant.

All that was needed, then, was a lazy man's substitute for the laborious watering process and, if possible, some method of speeding up root growth

Solutions to both problems have come within the last few years.

First, a number of sheet plastics have been developed which, while waterproof, are still porous enough to let oxygen and carbon dioxide pass through. These properties fired the imagination of Col. William R. Grove of Laurel, Fla. in 1947, Col. Grove, who grows hehee nuts, took clumps of sphagnum moss, moistened them slightly and

SPHAGNUM MOSS is next pressed around wounded stem. A handful of damp moss squeezed tightly together stays in place until the plastic wrapping is tied around it.

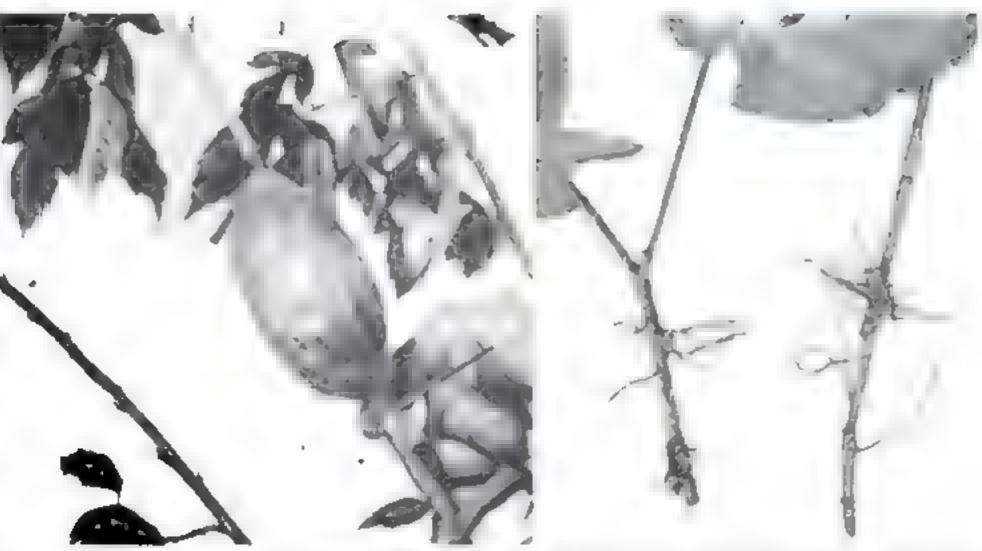

wrapped them around girdled branches—branches with a ring of bark stripped off—of his oriental trees. Then he carefully sheathed the moss in vinyl plastic. The warm rays of the sun soaked through the plastic, but no water could escape. Soon tiny roots were reaching into every erevice of the sphagnum. When they had formed dense spherical masses, the colonel severed his new "trees" from the parent plants. From that point on he was in business in a big way.

Root Formation Speeded

To make air layering practical in northern climates, technicians at the United States Department of Agriculture's Experimental Station at Glenn Dale, Md., added the final touch. They applied a root-stimulating hormone to the cambium layer before covering it with sphagnum moss. This hastened the formation of roots, producing a thrifty mass in time for planting in areas where first frosts come early.

The results of the Glenn Dale tests have been amazing. It has been proved that a majority of woody plants can be easily and cheaply reproduced by this form of layering. Some trees equivalent to normal five- to ten-year-olds are being developed in from five to eight weeks.

Anyone can join in the tests. Glenn Dale

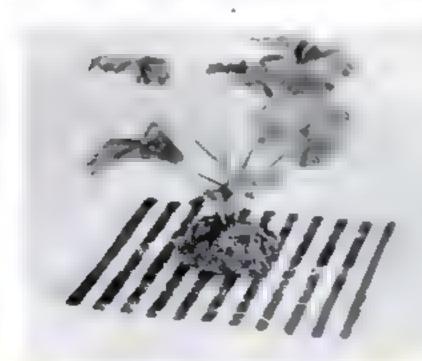

PLASTIC cover is now wrapped around mass, twisted at ends and tied securely with elastic bands. This makes a moisture-retaining but gas-permeable bag over the mass.

ROOTS on beanches above were grown by air layering between May 4 and August 14. Beanch is now cut away just below mots and planted either in a pot or in the ground.

welcomes reports from would-be Luther Burbanks. All anyone needs to get in the act is a sheet of vinyl plastic (the kind used to keep vegetables moist in a refrigerator), a clump of sphagnum moss as big as a small boy's fist and a pinch of Hormodin No. 3, which is available at most of the larger mirseries

Or, if tracking down materials like these is too much trouble, the Agri-Plast Corp.,

P.O. Box 142, Sarasota, Fla., has a home ket containing enough moss and hormone-surfaced plastic to make eight rootings, for \$1.95. According to the legend on the package, you simply rub the marked surface of the plastic on the cambium layer of the gridled branch, before applying the sphagman moss. That starts a new plant on its way as quick as you can say "Chaenomeles lagenaria."—Henry B. Comsteek

Starting a New Plant

PLANT CUTTING is rooted by air layering, speeding growth as much as 75 percent. Cutting above is nestled in moss, wrapped with Airwrap, a hormone-coated plastic.

MANY SMALL CUTTINGS can be packaged at one time for shipping and footing by laying them out on a strip of most backed by Autorap plastic, folding the plastic into an envelope, and rolling up the whole lot together. Center of the roll is then pushed up so that inner cuttings get light and air.

A few hours and dollars invested , in building a tetherball court will pay big dividends in fun.

Ball on a Pole

Makes a Fast Yard Game

CROSS volleyball with a Mavpole dance and you've got a good fast game—tetherball. You can play it anywhere there's room for a 20' circle. And all you need, besides the tetherball itself, is some \$8 worth of materials and a couple of hours' work digging a hole and pouring concrete

If you become a tetherball fan, you'll have plenty of company—12 times as many people are playing the game today as in 1948. The game itself is deceptively simple. The ball is hitched to the top of a pole with a rope. The players face each other and strike the ball with their hands, trying to wind it around the pole in opposite directions. Simple or not, it will give you a real workout.

In somewhat different form—played with paddles or tennis rackets and a small ball tetherball has been around a while. But the game that is booming today uses a 13% oz. ball that is 8%" in diameter when inflated medium hard (about three pounds of pressure). Some balls are leather, and are hitched to the rope with straps. Nine out of 10, however, are rubber covered. These have an indentation, developed by the Voit Rubber Corp., which allows the rope to be fastened on without a projecting knot. A good tetherball should last several seasons.

The best surface for a court is concrete. As shown in the photographs, the area where a driveway widens for entry into a two-car garage is a likely spot. Any hard surface will do, however. If you play on dirt or turf, you'll have to mark the lines with lime or tennis-court tapes.

As shown in the pictures, you can fasten a chain to the pole, then snap the ball and hae to it, making it easy to take it off when

How to Build the Court

by first selecting spot with room for 20' circular court, then chiseling away concrete from within 8" circle. As shown, work toward inside to prevent cement cracking outward. Make hole 20" deep.

steeve that anchors pole in ground is 16" length of galvanized pipe with 2" inner diameter. Before installing it in the hole, tie paper caps on both ends to keep dirt from clogging the pipe while you fill in the hole around it. while the hole is filled halfwhile the hole is filled halfway to surface with rocks and dort. Sleeve rests on 4" of this fill packed hard into hottom of hole. Before finishing, put level across sleeve top to make sure that it on't cocked.

Draw straws for first server

One player stands in each playing some. Both face some direction, shoulders toward the pale. Server fasses bolt in air, hits it with hand or fist in direction he chooses. Opponent may not strike ball on first swing around pale. Second time, he hits it back in apposite direction. As ball swings back and forth, each player tries to hill it so that rape winds completely around pale in his direction. Game is won by player who suc

coods in this or whose opponent forfeits the game by a foul. Winning four games wins set.

These fouls cost you a game:

- Hitting ball with any part of bady other than hands or foreorms.
- · Catching or holding ball during play
- Touching pole.
- Hitting rope with forearm or hands.
- Playing ball while pulside playing zone,
- Stepping on or across neutral-zone lines.
- Throwing the ball,
- Winding ball around pole below 5' mark.
 After opening game, winner of previous game serves.

VERTICAL ALIGNMENT of pole resting in sleeve should be checked before concrete is poured to seal hole. Pole is 11½' length of galvanized pipe. Chain for ball line is fastened 2" below upper end of pole, 10' above court.

POUR CEMENT after drenching the dirt and rorks in bole to pack them down. A good mix to seal hole is one part ecment, three parts sand, four small rocks, First mix the materials dry, then mix again after adding water.

smooth surrounding paveeven with surrounding pavement. Be sure top of sleeve is flush so you don't trip over it when pole is stowed away. It's a good idea to close open end of empty sleeve with a cap or plug to keep out rain.

not m use. However, many players don't bother with this but hitch the ball perma-

nently to the pole.

Galvanized steel pipe is recommended for the pole, both for appearance and resistance to rust. If you want to cut costs, however, regular black-iron pipe is a little cheaper and will do the job. Wooden poles are not strong enough, and may break during a game. If there's playing room, you

may be able to plant your tetherball pole in the same hole your wife uses for her umbrella clothes drier.

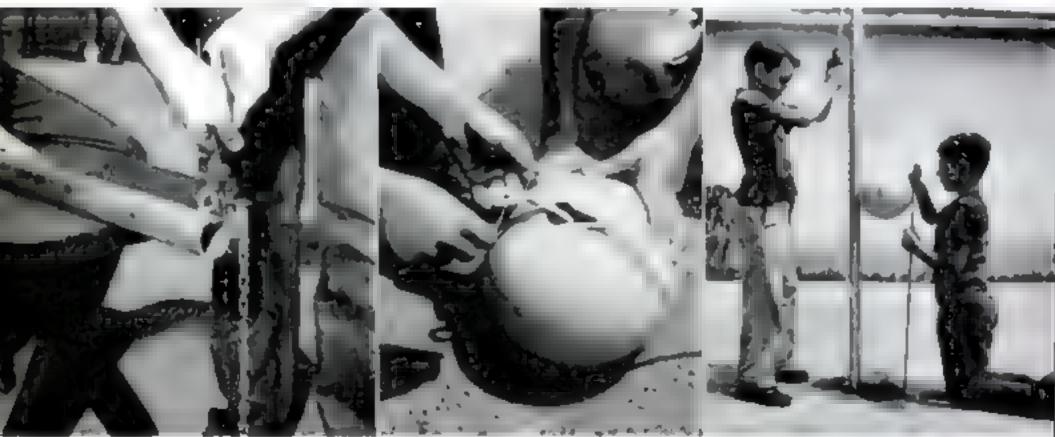

Tetherball is a good way to keep kids in the yard—the ball can't be hit out into dangerous streets. If Jumor challenges you, don't take your victory for granted because it looks like an easy game. You will find yourself running hard if you want to win.—Andrew R. Boone.

NOW LAY OUT THE COURT.
Start by tying a 10' string to
the pole and using it to chalk
a 20'-diameter circle on the
pavement. The lines can be
painted on for permanence.
Courts can also be built on
grass, asphalt, hard dirt.

marked off. Start by finding any two points on the circumference of the circle that are just 17'4" apart on a straight line. From these points draw lines through the center to the opposite side.

DRILL 5/16" hole through both sides of the pole 2" from upper end. Punching guide points first will help. Then insert and tighten an eyebolt to hold the ball chain. Cut off bolt flush with its nut or it may catch the chain.

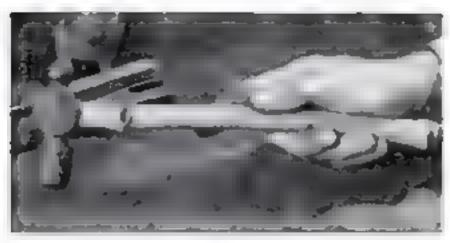

FASTEN THE CHAIN to the eyebolt with an S hook and close both ends of the book with pliers. Another S hook connects the other end of the chain to a harness snap so loop in end of tetherball line can be snapped to chain.

ATTACH line to rubber ball at ring countersunk in surface. After threading line through ring, either loop it back on itself as shown or tie a knot in the end. Pull end down into the indentation so it doesn't stick out.

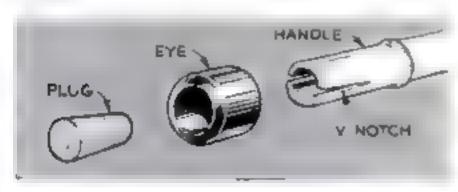

MEASURE MEIGHT before attaching line to pole chain. For average 10-year-old children, top of ball should be 3' above playing surface. For older players, bottom of ball should be 3' from ground, Paint or tape foul mark 5' up pole.

232 POPULAR SCIENCE

Bamboo Makes Hammer Handle

Bamboo sections cut from an old fish pole or lawn chair make strong, resilient handles for hammers. Select a portion that makes a tight fit in the eye of the head, or slim down a larger piece by cutting a V notch in the end (below) so the sides can be squeezed together. Do not shave off too much from the outside or you'll weaken the walls. Glue a tapered hardwood plug into the hole in the eye and another in the handle end unless it falls at a joint.—W. E. Burton, Akron, Ohio

Gloves Repair Tool Handles

Worn wooden handles on small tools such as screwdrivers, chisels and files can be quickly repaired by cementing on the finger portions of old leather gloves. The leather covers rough splinters and makes a comfortable, slipproof grip.—Frank Shore, NYC.

Emery Sharpens Electric Razor

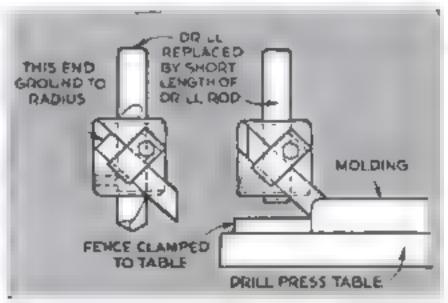

INSTEAD of replacing cutterheads when your electric razor pulls or cuts poorly, try honing. Coat the movable cutter with thin oil and sprinkle it with emery powder, 200 grit or finer. Slide it into the outer cutter, pressing it down against the spring-loaded walls. Run the shaver for about two minutes, pressing down the inner cutter every few seconds to redistribute the emery.—Walter B. Weber, Angola, N. Y.

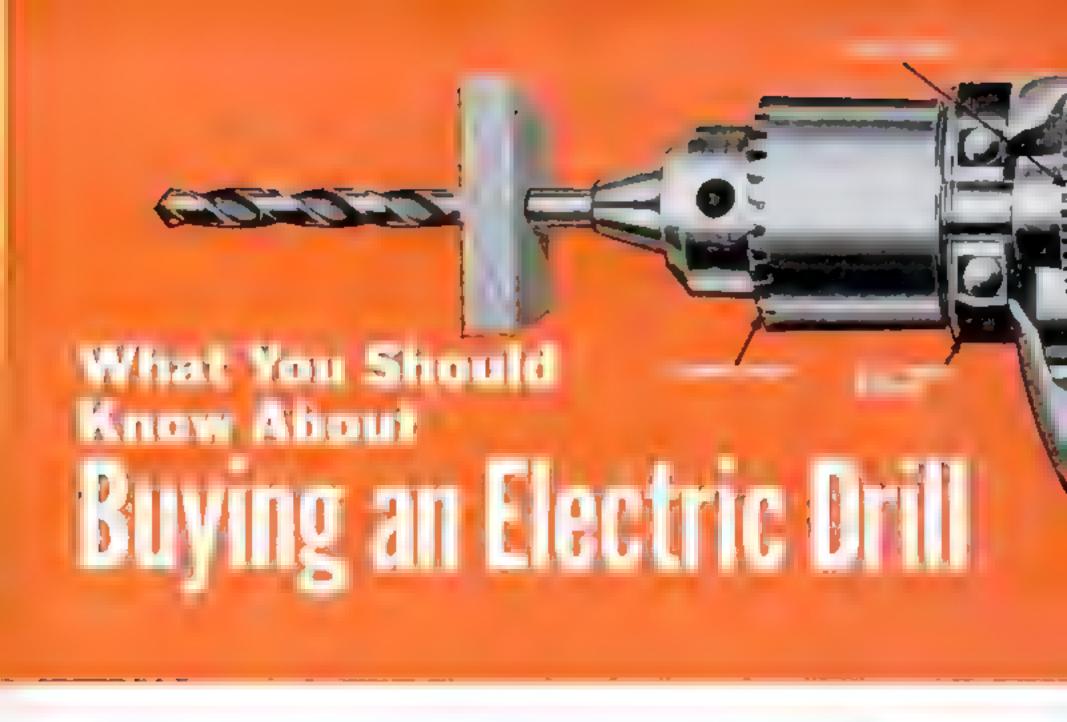

Chain Warns of Hidden Stairs

Doors that open directly onto a stairway can be deathtraps to persons unfamiliar with a house. A short chain that allows the door to be opened only a foot or two forces visitors to look before they step. Fasten the chain to a screw eye on the door, but hook it to the frame so it can be lifted off.—Hi Sibley, Nuevo, Calif.

Circle Cutter Shapes Molding

A SHEET-METAL hole cutter can be pressed into service as a wood shaper to cut any molding shape that can be ground in its cutter bit. Replace the pilot drill with a length of drill rod of the same diameter and just long enough to be chucked in the drill press. Grand the end of the cutter bit to the desired shape (in this case a #" radius) and set it to the required height in the drill press. Run it at medium-high speed and guide the molding past it by means of a fence clamped to the drill-press table.—Fred Barker, Illon, N. Y.

Selected and used with care, this versatile power tool will be one of your prized possessions. Here's what to look for.

By Elbert Robberson

A MOTORIZED shop you can hold in your hand—that's the electric hand drill to-day. Originally, it was just a tool for drilling holes without tiring your hands. Now it has attachments for doing just about any job you might want to do. But you may not be able to do anything well if you get an impractical combination—and you may ruin the drill.

To make a good choice, the first thing to decide is, "Just why do I need a drill in

the first place?"

If each is limited, and you only want to drill a hole occasionally, you can do just as well with a hurdy-gurdy that turns by hand. But if you want to drill a good many holes, or even a few that must be finished quickly and easily, motorize! Bear in mind, nevertheless, that regardless of the other work an electric drill can be made to perform, it is basically a *drill* and should be judged as such.

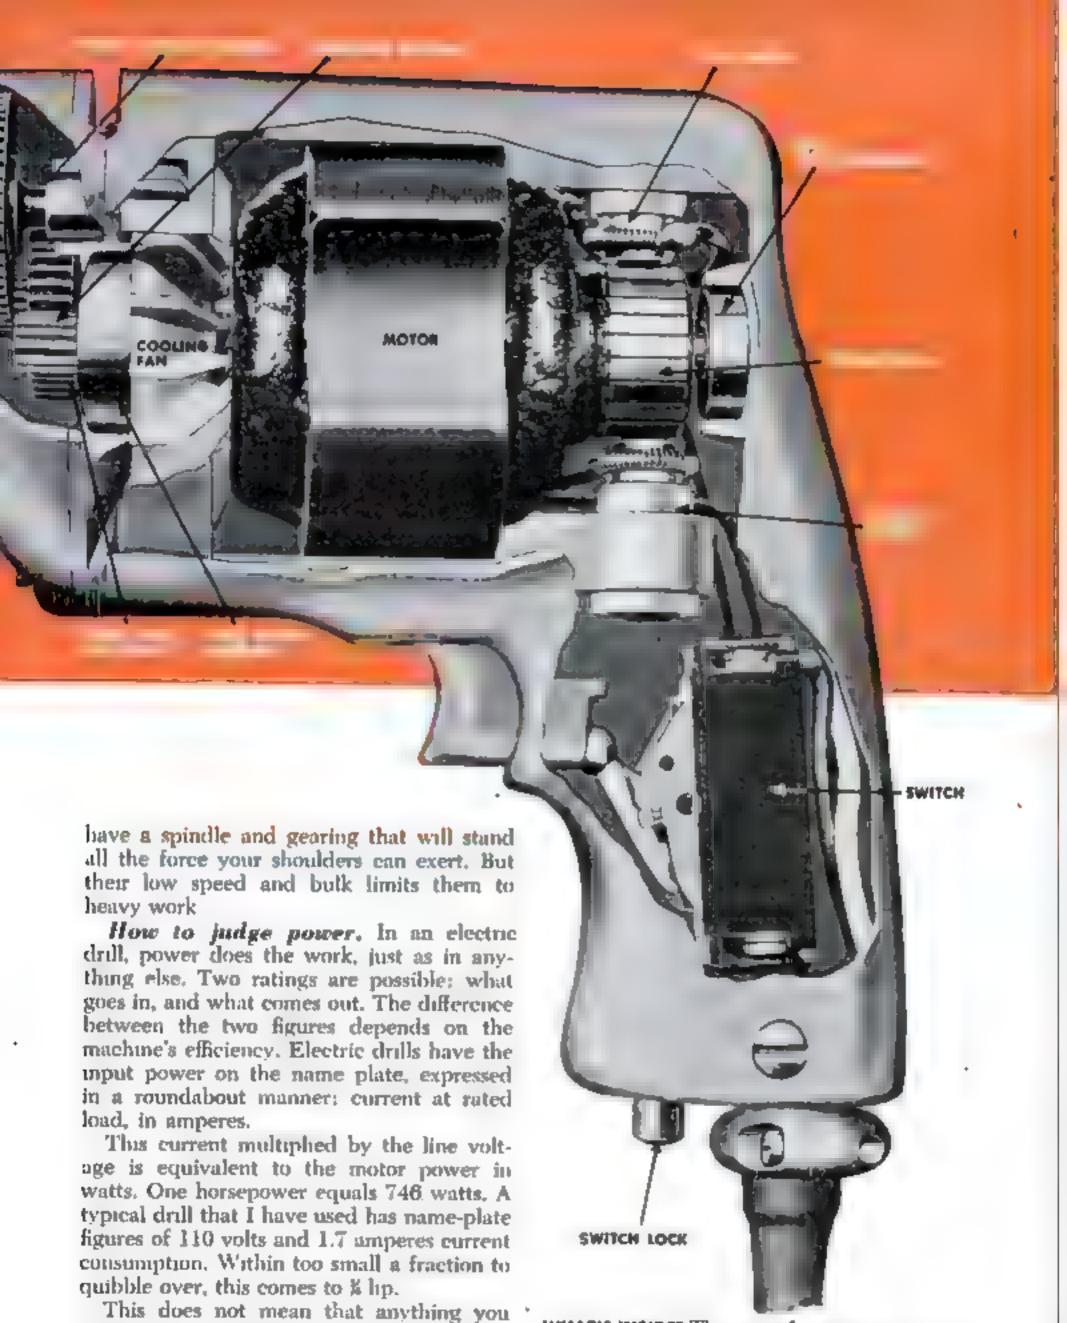

Compare the specifications of different drills before you buy. One drill will put a lot of beef into a slow all-day pull. Another will spin a small tool at terrific speed. One

may have a handle, while many are simply cradled in the hand. They balance differently, Any of the designs may be the best in the world—if you want to do the kind of work the drill was designed for.

This depends primarily on what kind of holes you need. For small ones in metal, a fluted bit can turn about 2,000 r.p.m., while such speed in thermoplastic could melt a ragged crater. Large holes in metal call for a slow-turning spindle—1,000 r.p.m. or less. A hole saw that will put a neat 1" hole through a steel plate at a well-oiled 500 r.p.m. might chatter itself to pieces at 2,000.

On the other hand, a fast-turning flathead wood auger (simply a cutting edge on the end of a rod, with the usual spiral fluting omitted to reduce friction) will push a clean 1" hole through a board in a hurry. At low speed, it will just chew up splinters.

Because of this, the average X" electric hand drill is designed to do a little of everything. If you are a specialist, get a special drill. For instance, in auto-chassis or structural work, the X" or X" tool would be best, even though the heavier construction and more powerful motor cost more. These drills

chuck up is going to be spun with the force

of one leg and shoulder of old Dobbin-and

it is good that it doesn't. Indeed, anyone

trying to hold an actual quarter-horsepower

in the offhand manner we are accustomed

to use with hand tools would get his arm

WHAT'S INSIDE? The manufacturer a interniur. usually will tip you off to such important features as the type of bearings, in the above lightweight drill, note that motor rides on ball bearings while the chuck spindle has a heavy ball-thrust bearing and a needle bearing at inner end. Gears reduce motor speed

to give torque for heavy palling,

twisted off before he could but the "off"

The figure actually means that this machine will convert X hp. of electrical energy into a rotary mechanical force, with a little loss here and there. By the time these losses are added up, the drill chuck ends up with about 1/32 hp. This is the power we have to work with. With no more than about 25 percent of the power that goes into the electrical line cord showing up at the cutting edge of the tool, it is apparent that, unless you simply want to dabble, a powerful motor is a must. The limit in this direction is dictated by cost, and by the weight you are willing to heft.

Now, how about speed? The figure on the name plate may be the speed at which the tool works, but it is more likely to be the free-running value. The working speed is about two-thirds of this. Therefore, unless otherwise specified, a name-plate figure of 1,800 r.p.m. should be taken to mean a spindle speed of 1,200 when the tool starts

taking a bite.

If you intend using the drill for a number of different applications, compromise is necessary. This should favor the basic use. Thus, the speed will be off only for the less important functions.

For instance, if running a countersink is

an important part of your jobs, don't buy one of the small high-speed whirligigs. It would chatter worse than a roller skate on a hoardwalk. Get a medium-speed tool. On the other hand, for freehand wood turning, get the fastest.

Build is important, too. In addition to having the right power and speed, the drill must have a suitable build for the job. If it is to be hand-held for jobs like buffing or sanding, you'll be happier if the handle attaches at the center of gravity. If putting holes in restricted spaces is your problem, you might find a drill having an integral angle head to be as valuable as the same weight of uranium.

In a typical drill of good mechanical design, a gear train consisting of the armature pinion, an idler and the spindle gear reduces the motor speed (of 15,000 to 20,000 r.p.m.) and provides torque for

heavy pulling.

Besides governing the spindle speed and torque, gearbox design also controls the bulk of the nose end and its ability to work in corners or close to perpendicular surfaces. Drills having a large spindle gear driven directly by the armature pinion have a bulkier shape for the same speed and power.

Lighter drills use sleeve bearings for both motor and chuck spindle, with a small ball-

TEST SETUP, a homemade Prony brake, measures power at chuck. Writer built it to determine efficiencies of drills at converting electricity to power. Above, friction brake is tightened until ammeter shows motor is drawing rated name-plate current. Scale

shows torque and rev counter shows speed. These values, with known length of torque arm, can be substituted in standard horse-power equation to show driff's output. I fliciency—power delivered to current drawn—runs 10-20 percent on most small driffs,

type thrust bearing. A home or hobby tool used only for drilling will do perfectly well with such an inexpensive lineup, provided the bearings get all the care specified by the manufacturer. But, ball or roller bearings and a long spindle are a must for extensive work involving side thrust. Comparative spindle length can be judged by the length of the "nose" or gear housing.

Three types of chucks. Like the spindle bearings, the choice of chuck depends upon the treatment it will get. The simple hand-tightened chuck is designed for economy, but it will take all the punishment the operator's hands or the motor can muster in straight, small-diameter drilling. Any bending force or a heavy unbalanced load, however, may eventually make it too splayjawed to grip firmly or run true.

A second type, used on intermediately priced drills, is tightened with a hexagonal wrench, and has enough grip to turn a harder-working tool, and the guts to withstand a small radial thrust.

But the only chuck which will stand up to continued heavy cutting, or the abuse of unbalanced or side loading is the geared

type, tightened with a toothed key.

Which, quite naturally, leads into the subject of electric-drill tools and attachments. Many are perfectly reasonable applications of the electric drill's tool-turning capability. Bu' even the drill manufacturers waver on the point of what an electric drill can reasonably be expected to do.

How to analyse accessories. If we analyze the various accessories according to good mechanical practice, there is a logical pattern. One complete family of tools and attachments has blanket approval; the twist drill and its cutaway descendants. Small end grinders, rotary files, hole saws, paint stirrers, plug cutters—all things that do their work in the direction the drill is pointed—can be used with any electric drill.

Clutches, torque converters, speed-changing or reversing gears to aid in screwdriving, tapping or drilling are all reasonable attachments. As long as it does not extend out so far that it exerts a bending force, any tool which is put to work by the application of pressure in line with the spindle is perfectly safe.

Another useful hand-drill accessory is the drill-press stand. This permits the drilling of truly perpendicular holes, and the safe application of more force than would be wise holding the tool in hand. But, since these

Types of Chucks HAND CHUCK is tightened by twisting. Designed for economy, it is most suitable for straight-line work. HEX-KEY CHUCK is commonly found on drille in middle price range. A hexagonal wrench tightens it.

stands are operated by a lever capable of exerting considerable thrust, care must be taken not to overload the tool. Also, realize that because of their inexpensive construction, these are not precision-boring machines. Nor does a stand give a drill the ability to withstand forces it was not designed for. For instance, some attachments like routers, planers and shapers do all right in a conventional drill press. But a light

electric drill, no matter what kind of a stand it is clamped in, isn't built for this kind of duty.

Rim- or face-working accessories. When a tool or attachment puts high side loads on the spindle of a light drill, the results may be disappointing. If you compare an attachment where a circular-saw blade is directly chucked with even an inexpensive table saw, you'll see that the latter has all the best of it. The table saw has heavy, wellspaced bearings and plenty of power to work the blade at high peripheral speed. For occasional use, of course, the drill attachment will suffice. But for frequent, prolonged or precise work, a tool designed for the work is far better.

The same is generally true of grinding, sanding and buffing. If you don't mind working at slow surface speeds, and if you take pains not to overheat the drill motor, the drill will handle an occasional job. If your need for a special tool occurs only rarely, it can be argued that buying a cheap drill attachment makes more sense than buying a more costly single-purpose tool. But don't ask or expect too much from the attachment.

Indging attachments. There are whole families of new attachments now available that use a drill solely as a motor to run a

quite separate machine tool. Their utility depends to a considerable degree on how they employ the motor. If the attachment frame grips the drill frame rigidly, and asks the spindle to supply only rotary power, it will not cause harm so long as the motor is not overloaded.

If the attachment is secured solely or mainly by chucking, think of it as a lever that may multiply side loading on the spindle bearings very substantially. An attachment that puts a 1-lb, side thrust 6" ahead of the spindle, for example, can apply very high loads to drill-spindle bearings that are only 1" apart.

Some makers provide straight cylindrical chucking shanks in their attachments, and others use a shank with three flats for the chuck jaws. The first is less desirable from the point of possible chuck damage if the tool should snag under load. Do not let a chuck slip if you can possibly help it-it will not only chew up the shank but may affect the accuracy of the chuck. END

Every time my dog stuck his nose in his dish it slid away from him. So I cemented a rubber fruit-iar ring on the bottom. Now the dish stays with him down to the last mouthful.—E. Rehm, Queens Village, N. Y.

Tongs Lift Beehives Safely

HERE's a honey of an idea for doing a ticklish job-moving a beehive without getting stung. A couple of pairs of these longhandled tongs let two men pick up a hive without touching it. The tongs are simply 39' lengths of strap iron, bent at the tips and bolted together near one end to provide a scissors action. Hose sections slipped over the ends provide hand grips.—Charles L. Stratton, Hollis, N. H.

Sanding Disks Cut Quickly

IF YOU'RE caught short of sanding disks, here's an easy way to cut your own without ruining the family scissors. First jab a short, pointed tool into the center of a sandpaper square, then press a razor blade through the paper into the wood beneath at a point equal to the desired radius. Rotating the paper slowly against the blade will then slice out a neat circle.-Charles Macioci, Port Washington, N.Y.

Windows steam up in winter?

Specs become blinders when you go inside? Then try a liquid chemical designed for the job of

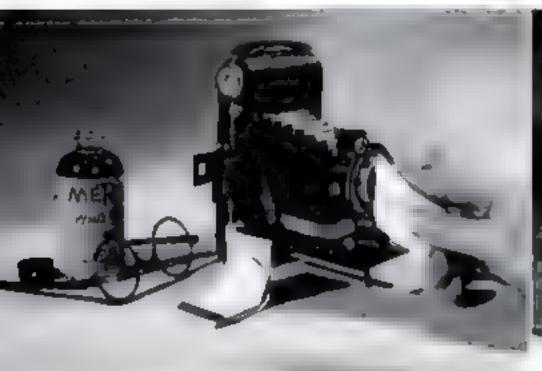

Keeping Glass from Fogging

By Kenneth Murray

CAR WINDOWS STAY CLEAR if you cout the inaide surfaces with a fog-preventing chemical." Wipe it on, polish lightly and a thin, invisible film remains. Now available in bottles for home use, the liquid has long been
used on plane windshields. Cloth tied on the
edge of a windshield scraper (above) makes
a good applicator for one windows.

Mrs. . w Intt-Fug, made by Meets Chemical Co., 1971 E. 55th St. 4 g.

EYEGLASSES AND CAMERA LENSES will not steam up when brought into a warm room if treated first. Moisten a pad of tissue and store it in matchbook cover for use as needed.

USE IT ON HOUSE WINDOWS. They'll stay clean longer because steam won't build up and run down their surfaces, leaving streaks. The chemical also works on clear plastic.

INSIDE FACE MASKS for diving, welding and paint spraying, the chemical keeps glass clear in spite of breath passing over surface. It works on tight-fitting sun goggles too.

IN THE BATHROOM, it will keep the medicinechest mirror free from steam while you enjoy a hot shower. Apply it to a shaving mirror as below—and you can breathe all over it.

Tile Base Made of Hardboard

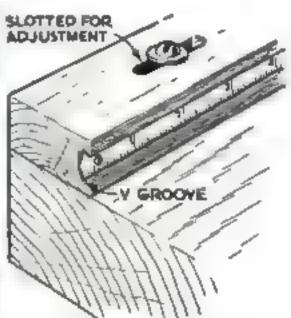

HARDBOARD panels can provide a smooth, flat base for asphalt, cork or rubber floor tile, as well as impleum or carpeting. Nailed at 6" intervals, the hardboard is laid with a %" space between sheets. A felt liner usually follows. Care must be taken to keep the joints between tiles from coming directly over the spaces between panels.

Rubber Tips Hold Baby Fence

SPRING-LOADED catches designed to lock a window open hold this baby fence in a door opening without screws. The rubber tips press outward against the door frame on each side. Built of pine, with 30" pickets of one-by-threes and a pair of two-by-two crosspieces, the gate is K" less than door width.—Douglas E. Knight, Endicott, N. Y.

Flexible Tape Inlaid on Table Lets You Measure as You Saw

To save time in measuring work you are cutting on your swing saw, mount an inexpensive 6' or 10' steel tape in a groove cut in the fence or back edge of your saw table. Then you can just slide your board up to the required dimension on the tape and swing the saw.

Embed the tape in a beveled groove cut in the fence. Cut the groove by passing the

fence twice under the saw blade, set at about 30° off vertical, then make successive passes to clean material between the two angle cuts. Slide the tape into the open end of the groove and secure at both ends with wood screws. Elongate the screw holes in the fence to permit slight adjustment of the zero mark when changing blades.—Michael Ligocki, Gary, Ind.

FISHING is main interest of more than threefourths of outboard buyers, a survey shows. But half of the fishermen intend to use their

boats for cruising, too. Motor above is Martin 75, a 7½-hp. job that weighs 44 pounds typical of light weight of today's outboards,

Come on a cruise in the

New features have turned the old put-put into a seagoing power plant that handles with the same ease as your automobile.

By Hartiey E. Howe

"TOU don't have to tell me anything A about outboards," I said. "Don't you know I used to have the snappiest boat on the river? You might as well tell Calvin Coolidge how to save money .

"Speaking of Coolidge," said Joe, "just when did these nautical exploits of yours take place?" Joe eats, sleeps and lives outboards.

"I was in high school," I said. "Not so long ago. Before the war, of course."

"The Civil War, I suppose!" Joe replied sareastically. "You wouldn't claim to be an auto expert because you had the first Model A in town, would you? Outboards have changed as much as automobiles. In fact, running an outboard now is almost as easy as driving a car-and more fun. Come on out on the river. That is, unless you're get-

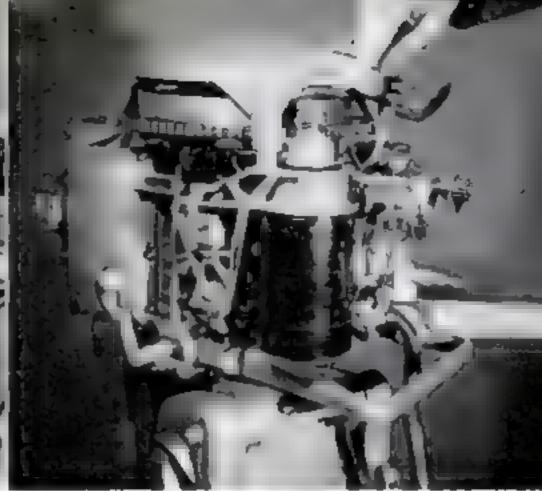

ting too old."

I couldn't let him get away with that one. On the way to the dock I got to thinking about my outboard. Maybe she wasn't quite the snappiest boat on the river. But she was a lot of fun. Cetting under way was a real operation: the choke had to be fiddled with, the spark set fust right. And then I'd pull . . . and pull . . . and pull . . . With luck, some time in the first 10 minutes she'd catch with a roar and lunge ahead while I grabbed for the tiller . . .

Sometimes we'd cruise as much as a quarter-hour before running into eelgrass. Before long it would be time to refill the tiny tank from one of the extra cans of gas we carried-if we'd remembered to fill the

SELF-STARTER is newest outboard development. At left above, pressing button on dash spins engine. Shown in place on Evinrude at right above, buttery-powered starter works like the

one in your car, the gear on shaft of electric motor rising to engage the big gear on top of engage. Cord is kept for hand starting. Johnson features a similar self-starter.

cans. Once we rowed home, three hours against the tide . . .

"Hey, wake up!" said Joe. There was his new boat alongside the dock. She looked mighty trim-but I had my eves open.

"What gives?" I said. "This isn't any outboard!" And I pointed to the stern, as bare as a girl on a garage calendar.

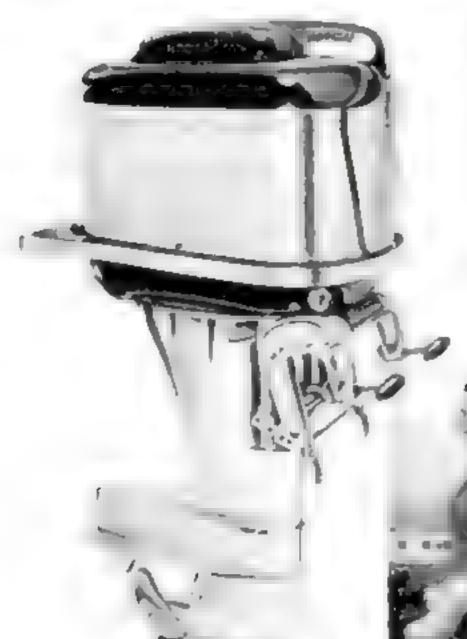

Joe grinned and opened a pair of cupboard doors fitted neatly under the broad stern deck. I peeked in. There, nested in a well, was an outboard motor.

"Hmph!" I said withly and went forward. I had to admit it looked a good deal like

the front seat of an auto, with an instrument panel complete with speedometer and tachometer, a couple of levers, and a shiny auto-type steering wheel But I wasn't going to let on that I was impressed.

"A steering wheel,

AMONG LIGHTEST OUTBOARDS sold in U.S. today is 18-lb., ¾-hp. Anzani Minor (left), imported from England by
Damac Corp., Roslyn,
L.I., N.Y. British outboard makers, like
British cat makers, are
sending U.S. market
very lightweight jobs
such as this one-cylinder
model.

market today is this brand-new fourcylinder Mercury Mark 50, designed for cabin cruisers, work boats, highspeed boating. Engine weighs 120 lb., is rated by manufacturer at over 40 hp. It is now the only U.S. four. (A 50-hp. U.S. four once built for racing is no longer made.)

eh?" I said. "I had one of those. The tiller lines took a beating, too. One time my girl was on the dock as I came in fast. The tiller lines broke and before I could get to the stern we'd bounced along the piling. Cost me a new girl and \$50 for planking. By the way, where are the tiller lines on this job?"

"There aren't any, Pop," said Joe "This boat steers hydraulically—just needs a couple of little rubber tubes to connect wheel

and engine."

A Touch on the Button

As Joe slid in behind the wheel, I waited smugly. The darned fool had forgotten to go back to the stern to pull the starting line on the motor.

He leaned down and touched a button on the dash. There was a low roar.

"What's that?" I asked

Joe smiled patiently. "The motor. You know, the thing that makes the boat go."

I shook my head. "Stop kidding. That's no outboard motor. A, you didn't go back there and yank the cord. B, the boat isn't moving. C—"

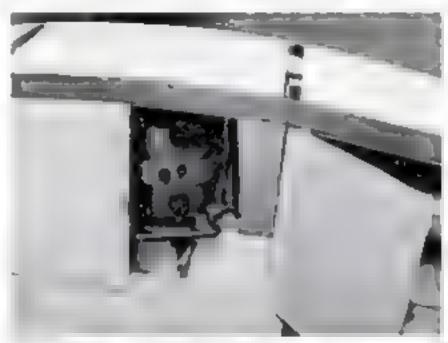

"Never mind C," he said. "You don't even know the ABC's of outboarding any more. This is a 1954 model, old-timer, and you no more pull a cord to start it than you crank your Buick. An electric motor does

crank your Buick. An electric motor does the same job in both places." A couple of the new '54 engines have starters powered by auto batteries, he explained. Big news.

"And the boat doesn't leap ahead when the engine starts for the same reason your car doesn't. It's in neutral. Many outboards have forward, reverse and neutral gears now, and a good number have remote controls—worked by rotating cables. Of course

AUTOMATIC BOAT SAILER is standard on all but smallest '54 Scott-Atwaters. A positive-displacement vacuum pump, operated off drive shaft, can handle 150 gallons an hour.

self-balling motor box is set in stern of new U-Mak-It kit-built cruiser. Bottom of box is watertight, draining overside. Kear deck section lifts out for access to motor.

VARIABLE-PITCH PROPELLER allows boat speed to be varied without changing engine speed. While engine is running, blades can be adjusted from within boat through complete

range from full forward through neutral to full astern. Called Flex-Prop, device permits keeping engine at most efficient speed for cooling system and spark plugs.

HYDRAULIC STEERING: Turning wheel moves poston in cylinder, forcing hydraulic fluid through tube. At engine end, fluid moves second piston, which swings engine, rudder.

you need this other lever—the remote control for the throttle—to be able to handle everything from the driver's seat."

I didn't have a ready answer to this. By now we were slipping smoothly downgiver. It was Saturday and a lot of outboards were out. My friend waved at them as possessively as if he were old Ole Evinrude himself.

"See those? That's just the beginning. This past year they sold almost 40 percent more outboards than in '52—half of them first-time owners. That makes close to four million in operation."

"What do people use them for-racing?"

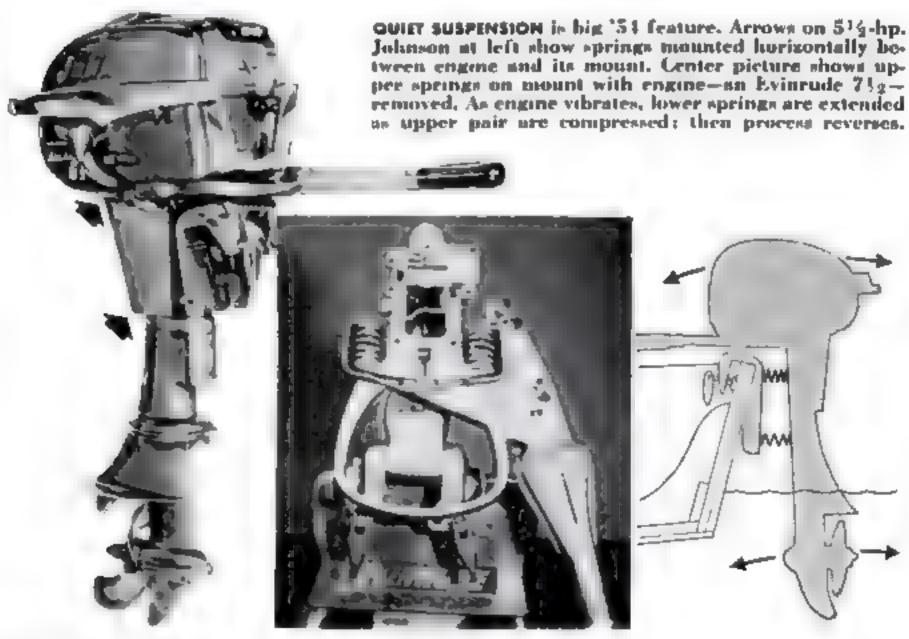

"No, fishing and cruising mostly. That's why manufacturers are emphasizing convenience and easy handling rather than high speed. Of course it helps that today's outboard keeps going no matter what. Why, not so long ago outboards ran the open ocean between Nassau and Miami."

Pressure Keeps the Gas Moving

While Joe was talking, I looked over his boat. I found a big red can, stowed under the stern deck.

"That's a pretty hefty load to hike up on top of the engine while you pour it in."

"Hike up nothing," Joe said. "That can is feeding gas right into the engine tank. See that little pump handle on top? A few strokes build up pressure to start the gas moving; their pressure is fed back into the can from the crankcase to keep it flowing. With a couple of caus we can run all day. Some of the new motors come with fuel pumps for use with built-in gas tanks."

By this time we were well downriver. Ahead of us a clammer, put-putting along in an old skiff with a light outboard, turned in toward the flats.

"He's heading for trouble," I said. "That's

full of eelgrass in there."

"Wrong again," said Joe. "Weeds may have been bad news in your day, but that guy's light twin is fitted with a skeg—a big fin—that keeps eelgrass away from the prop. And of course with any gearshift outboard, it's easy to throw the prop into reverse and unwind the whole mess in a second."

As we headed back, we met an open fisherman coming down. As the trim craft came abreast, there was a sharp bump from under her stern, her outboard bobbled and began to race, and the boat lost way. Apparently her prop had smashed into something—probably a half-sunken log.

I was ready to pass a line, when suddenly the racing engine returned to normal and the fisherman picked up speed again. "What happened?" I asked. "I thought that fellow

had anapped a shear pin sure."

"Behind the times again," said Joe with a grin. "That fellow's engine has a disk drive with an automatic disconnect on the shaft. If the prop hits something, it's automatically separated from the shaft so the blades stop turning. When the prop is free, it hooks up again all by itself."

How to Hush an Engine

When we were tying up at the dock a trim runabout came zipping up the river. I could scarcely hear her. "What's that?" I

asked Joe. "A galloping ghost?"

"Along with the self-starter, that's the big news in outboarding—silent engines," Joe replied. "Designers have found that most of the noise from an outboard comes from the boat, not the motor. The hull acts like a sound box to build up the noise, just as the belly of a violin builds up the sound from the strings. So a couple of manufacturers have hung their engines on two sets of springs that damp the vibration before it reaches the hull. I went out with one of the new jobs the other day and you could talk in normal tones right ahead of the engine.

"I tell you," he went on, "the outboard is getting all the advantages of the automobile. Why, now you can even get a directory of the good outboard waters in each state, just like an AAA guide. Wait and see—this is only the beginning!"

And he may be right at that.

END

MARCH 1954 245

Doorstops Protect Boat

A now of inexpensive rubber doorstops screwed to the gunwale of a small boat will protect it from damage in docking and wear much longer than ordinary rope fenders that fray quickly. The stops are spaced several inches apart and need only occasional tightening to keep them serviceable.—Larry Gottlieb, NYC.

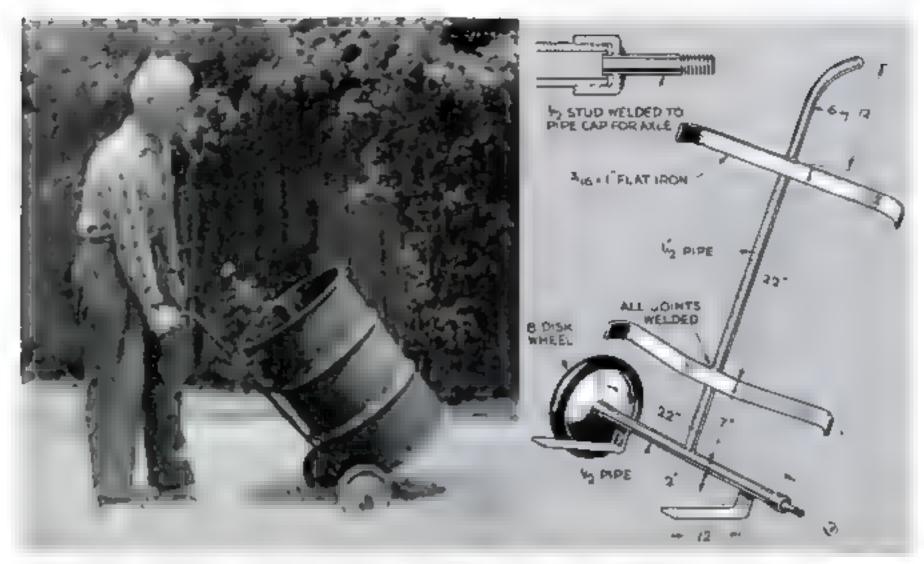

Handle Makes Filing Easier

This saw-type handle for a file is comfortable to use and lets you put pressure along the top of the file with one hand. Cut a triangle from 1" stock, notch out the bottom to take the file, and drill a hole into the projecting ledge to hold the file tang. For finger slot, drill two 1" holes about 3" apart. Saw out the waste between.—Ken Murray, Colon, Mich.

Paintbrush Made from Rope

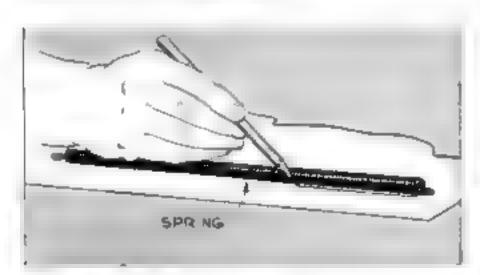

You don't have to wear out a good paintbrush on rough jobs like stenciling or spreading gasket or roof-patching cement. A piece of heavy rope, unraveled at one end and taped, makes a brush you won't have to clean. Snip off the used end and you're ready for the next job.—
Put. P. E. McCafferty, Fort Bliss, Tex.

Welded Utility Truck Can Lighten Your Garden Chores

Extrying the incinerator or hauling bales of peat moss or fertilizer around the home grounds doesn't have to break your back. This utility truck, made from pipe and strap iron, can shoulder the burden and reduce the drudgery of gardening.

Spring Guides Wavy Line

A wavy line makes a nice border for a showcard or poster, but it's hard to draw evenly freehand. If you just run your pencil along the edge of a coil spring, as shown, it will make a fine series of scallops -Victor II. Lamoy, Upper Jay, N. Y.

Keep Arresters Bare of Paint

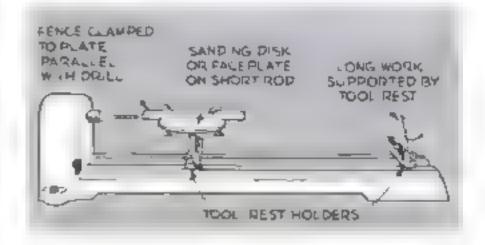

IF THE lightning arrester on your TV set is on the outside of the house, be sure to mask it with heavy cloth before painting—particularly spray painting. If lead paint gets on it, your signal strength may drop.—Marion L. Rhodes, Knightstown, Ind.

Weld two pieces of pipe together to form a T, then bend the longer piece into a curved handle. Weld the strips of iron to the body and make the axles by welding two h" studs or bolts into holes drilled in two pipe caps.—Iff Sibley, Nuevo, Calif.

Your Wood Lathe Can Bore, Too

WITH this rig, your wood lathe can be used as a horizontal boring machine for drilling odd-shaped parts or long mating pieces to be doweled.

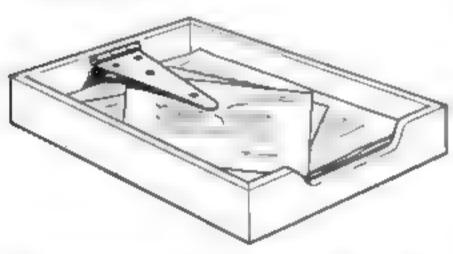

Fit a short length of rod in the hub of a sanding disk and clamp it in the lathe tool-rest holder to serve as a boring table. Clamp a wood fence to the table to guide the work into the drill, which is held in the headstock chuck. Adjust table height and fence to line up the work with the drill. This setup can easily handle repeat operations or production drilling Clamp the tool rest at the tail end of the lathe to support long work.

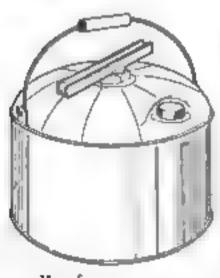

Easter-Egg Pix Decorate Paper

You can make the kids their own fancy stationery at low cost with the red and blue transfers that come with a package of Easter-egg dyes. To print a design, just place it on the note paper face down and moisten the back lightly with a bit of damp cotton or a piece of cloth.—Ken Murray, Colon, Mich.

Hinge Weights Paper in Tray

A HINGE, screwed to one end of a wooden file tray, will keep your papers from blowing away, yet allow you to slip them out easily. A strap hinge can be used if you hacksaw off part of one strap.—Lewis Booker, Louisville, Ky.

Channel Makes Filler-Cap Grip

IF THE gas can you use with your outboard has a filler cap that sticks tight, try soldering a 4" piece of brass channel on the cap for a handgrip. And if the cap

really freezes, you can lay a hefty screwdriver in the channel for more leverage.— R. C. Roetger, Warrington, Fla.

No Matter How You Slice It ...

During last-minute party preparations my wife set me to slicing thin slices from a long skinny loaf of Vienna bread. All the knives were dull, so the first few pieces were badly mangled. But I slipped downstairs to my shop and crosscut the loaf into thin slices on the circular saw. She still doesn't know my secret.—Leo R. Daugherty, Fort Wayne, Ind.

Holes Let Paint Return to Can

THE groove that runs around the inner runs around the inner runs of a paint can wastes a lot of paint. I've found that punching or drilling several small holes in the groove lets the paint that collects there drain back into the

can. Not only do the holes save paint and keep the outside of the can clean, but they allow you to replace the cover tightly when you're through.—Howard E. Moody, Upper Jay, N.Y.

3-D Glasses Dim Pilot Lights

ILLUMINATED dials or other indicators that glare with eye-straining brilliance can be dimmed by disks cut from the viewers for 3-D movies. Adjust them by rotating one over the other to pass the amount of light desired. Tape in place.—William B Woodington Jr., Philadelphia.

Rubber Keeps Bait Jar Closed

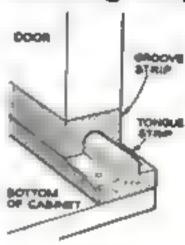

A sur strip of inner tube across the top of your live-bait jar will let your hand in but keep the liveliest frog or cricket from jumping out. Cut a circular piece, allowing about an inch of overhang all around the jar. Stretch it taut across the jar opening, and build it with wire or string. Use a razor blade to slit the self-closing handhole. Punch or cut several openings in the rubber to let in air.—Thomas P. Ramirez, Fond du Lac. Wis.

Saw Doubles as Pruning Blade

Ir you use a pruning saw only occasionally, you can make a satisfactory rig with a blade borrowed from an ordinary nest of saws. Choose one of the narrower blades and bolt it as shown to a flat pole of the desired length. Since the saw blade is unaltered, and can be quickly removed, it is always readily available for use with its regular handle,—Robert Tyson, NYC.

Flooring Strips Make Slides

TONGUE-and-groove strips ripped off the edges of standard flooring provide ready-made slides and tracks for small cabinets. Nail the tongue strip to the bottom of the cabinet and the groove strip to the bottom of the door.

Rub both strips with soap to make the door slide easily. The top of the door, which is held in position by two strips of wood, needs no track.—Richard B. Spitler, Yellow Springs, Oluo.

Conversation Piece for Phone Corner Has Rolling Seat

A TIGHT corner in a hallway is no place for a telephone, but if you must have it there, this compact table with matching stool will not interfere with traffic.

Cut all parts from %" plywood except the feet; these are made from 1%" pine and drilled for casters. Assemble the table and backboard before attaching it to the wall. Join the parts with glue and nails. Locate the wall studs, and drive screws through the backboard and shelf cleat to secure the table. Assemble the stool, also with glue and nails, and install the casters.

Sand and paint or variish to harmonize with the surroundings.—Mrs. Ruth M. Larson, Rochester, Minn.

DOOR SHELF AND BITCH PART OF PLY WOOD

DOOR SHELF AND BITCH PART OF PLY WOOD

DOOR CASTER

248 POPULAR SCIENCE

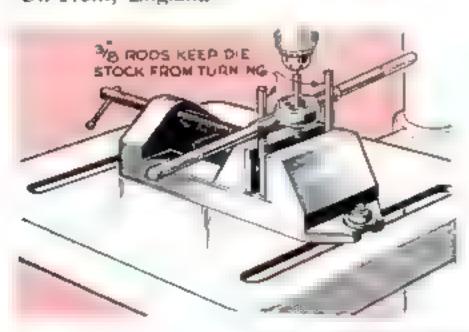

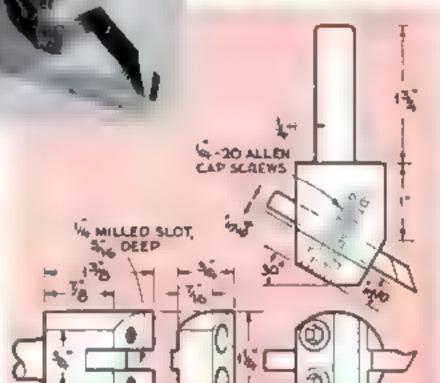

Fly Cutter Mills Smooth Surface. Because it throws the chips out instead of carrying them in the teeth like a milling cutter, a fly entier gives smoother finish when used for milling surfaces. This one grips a 4" lathe bit in its grooved head. A matching cap, forced against the bit by two Allen screws, holds it in position, yet permits adoptiment

Turn the body in the lathe and nall a 30° bevel on the end. Mill a 3" square groove in the beveled lace and drill and tap two holes for the setscrews. Shape the tongued cap from X" flat stock to fit roughly over the head and attach it with the set-

Rod Threaded in Drill Press. Faced with the problem of threading a number of rods, all smaller than %" diameter, I rigged a threading setup in my drill press.

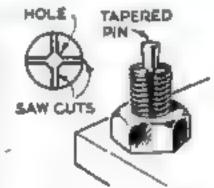

I clamped a vise to the drill-press table and locked two pieces of %" rod in a vertical position between its jaws. The rods to be threaded were chucked in the drill press and fed at slowest spindle speed into a diestock set between the two vertical rods. The rods prevented the diestock from turning, yet allowed it to slide upwards as the die cut the threads.—L. Hoyland, Stoke-On-Trent, England

screws. Then chuck the assembly in the lathe to bring the cap to the body shape. -Gus W. Hall, Brooklyn, N.Y.

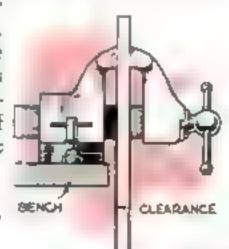

Nut. To lock a nut that must be removed at times, drill a hole in the end of the bolt and hacksaw two slots part way down it Then turn the nut

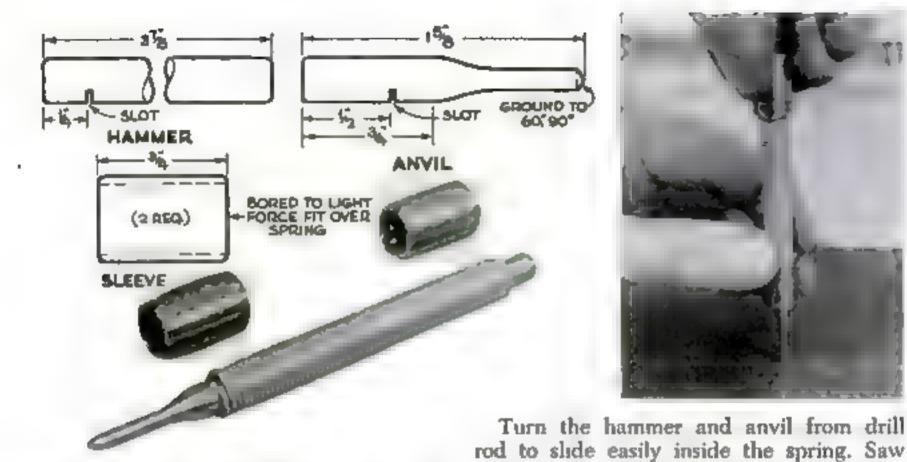

down tight and drive a tapered pin into the hole to spread the slotted bolt end. Pull out the pin with a pair of pliers when you want to unscrew the nut.—Federico Strasser, Santuago, Chile.

Bench Vise Tip. Before bolting a vise to the workbench, check to be sure the face of the rear stationary jaw overhangs the edge of the bench, if only by a fraction of

an inch. With the vise mounted this way, you'll have no trouble gripping long shafts or rods vertically between the jaws of the vise.—Andrew Vena, Philadelphia.

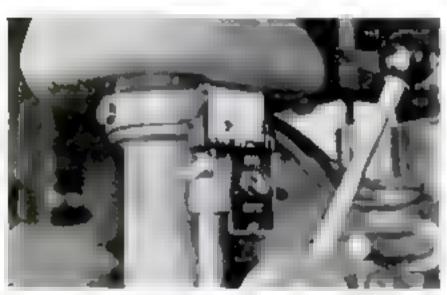

Please turn the page for more shop ideas.

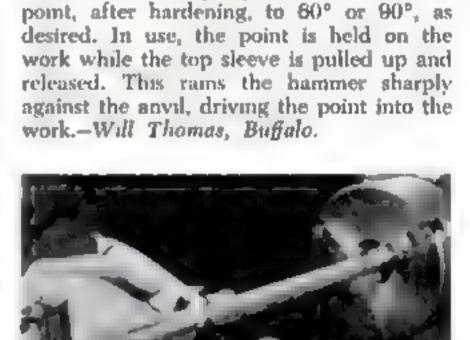

Spring Punch Needs No Hammer. Punch your center marks right on the nose with this spring punch that has-its own hammer built right into it.

Use a %" o.d. tension spring, about 4" long to serve as both power for the hammer and outer case of the punch. The spring should be just stiff enough to be easily pulled apart with the fingers, yet snap back sharply when released.

Snap Switch Controls Drill Press. A drill press can be made to turn itself on and off automatically with a normally closed snap switch (arrow) installed above the depth gauge. Mount the switch on a bracket screwed to the belt guard and wire it in series with the regular toggle switch. When changing drills, flip toggle switch to OFF to prevent accidental starting, then flip it to ON for automatic operation. As the spindle is moved down to the work, the top end of the gauge releases the switch button. starting the motor. Raising the spindle shuts it off. Tape switch terminals to prevent accidental shorting by metal chips.—Elbert Robberson, Port Washington, N 1.

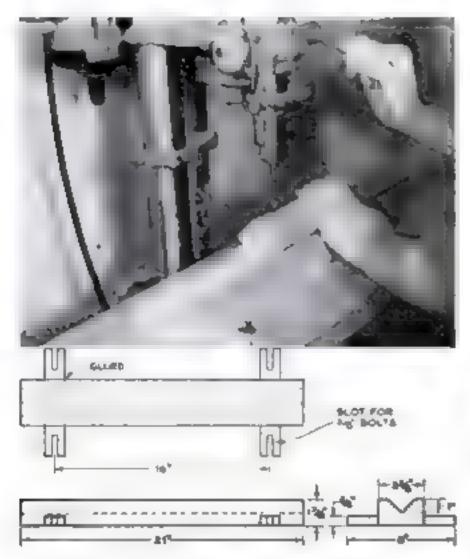

slots in both parts and drive the spring ends

into them. Cap the top and bottom of the

spring with two sleeves turned to a light force-fit over the spring diameter. Grind the

Lubricant for Tailstock Center, White or red lead makes an excellent lubricant for work held between centers in the lathe. Unlike oil, it will not fly off the rotating work or squeeze out of the centerbore. Bought in tube form, it is easy to apply and will not harden, as it might in a can.— Ioseph Tracu, NYC.

Hacksaw Tips. When cutting thin tubing, mount two blades in a hacksaw with the teeth pointing in opposite directions to minimize grabbing. When sawing overhead, use one blade with the teeth toward you.— L. M. LaBar, West Pitiston, Pa.

V-Block Jig Speeds Drilling

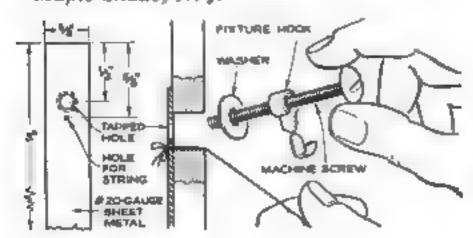

This jig centers all square or round work and aids in drilling holes through table legs, turnings or round stock.

Make the block by cutting a 1"-deep V with a table saw set at 45°. Then cut two 1%"-wide grooves across the bottom at each end for bolting strips. Slots cut in both ends of each strip permit you to shift the block until it is centered under the drill-press spindle. Use a finishing nail as a stop when drilling duplicate pieces.—Gordon D. Carlson, Minneapolis.

Metal Strip Subs for Toggle Nut

A METAL strip can be shipped behind a thin wall to make a bolt hold. Thread a hole in the strip to receive the bolt. Drill a hole in the wall just big enough for the strip to ship through. Knot a light string in the strip and push it through, hining up its hole behind the hole in the wall.

Thread the bolt into the strip and cut off the string. You can use a washer to cover the hole in the wall.—John C. McDowell, Maple Shade, N. J.

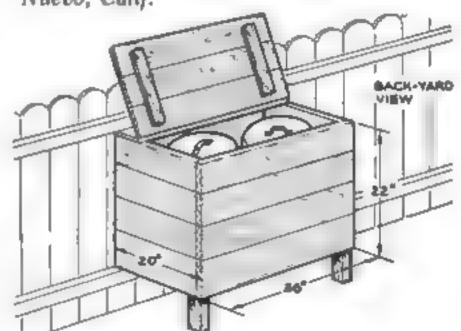

Trash-Can Bin Is Dogproof

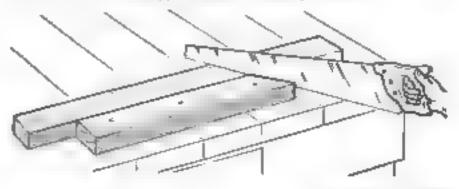

FILLED from the inside and collected from the outside, this bin keeps trash cans out of sight from the house, yet within easy reach for the collector. The lid keeps dogs from knocking the cans over.

Saw a 22"-by-36" opening in the fence for the bin. Rear corners are joined by two-by-fours, which also serve as legs. The front rests on the lower fence rail.—Hi Sibley, Nuevo, Calif.

Wood Scrap Guides Miter Cuts

An extendency inter guide can be quickly made from a scrap length of two-by-four. Cut one end to the desired angle, nail the piece to a bench or sawhorse and let the saw ride against the end to guide the cut. —L. H. DeLong, Lake Wales, Fla.

Gus Doctors a Case of litters

(Continued from page 182)

checked the universal joints and ran the car in gear, studying the drive shaft.

Then he and Pederson took another run. The vibration was still there. Gus

began to sweat.

Back at the garage once again, he checked the grease pack of the front wheel bearings, and proper bearing adjustment. He checked camber, caster, front suspension.

"Sometimes," he said to Pederson, "the manufacturers fail to pack front wheel bearings—not often, but it does happen. Now how about front-wheel and tire bal-

ance?"

"You check 'em," Pederson said. "I have."

Gus did check them. Wheels and tires balanced perfectly. Gus noted that Pederson had attached lead balancing weights here and there. He scratched his graying hair thoughtfully.

"Let's try her again," he said.

Gus pulled up at the pumps, beckoning to Stan Hicks.

"Put 50 pounds in these tires, will you,

Stan?" he said.

"But, Gus," Stan protested, "you can't put 50 pounds in these tires. Factory spec calls for only 24."

"Sure," Gus nodded, "but let's ride on

50 this trip."

The Tires Balance

Once more on the open road, Gus watched the speedometer needle climb-50-60-70-75.

"No vibration," he commented.

"But I can't ask Madsen to scoot around the country on 50 pounds of air," said Pederson.

"Right." Gus's eyes twinkled. "We've tacked this vibration down squarely to the tires. The rest is easy."

"Easy!" echoed Pederson. "I can't buy that, Tires balance—remember?"

"Sometimes," Gus said, "manufacturers fail to build a tire right—not often, but it happens. It happens so seldom that I'd bet my hat there's just one guilty tire on this bus."

Gus pulled an air gauge out of his pocket. "We'll just let the air out of one tire at a time, down to 24 pounds, until the vibration comes back."

The Vibration Goes Away

Gus knew that one tire in 10,000 or more may have its ply laps laid together, instead of being separated. When this occurs it is a mechanic's vibration night-mare. The tire can be made to balance, but there is a hard spot that pounds the road at high speeds. When the tire is inflated, rock hard, the hard spot is no different from the balance of the tread, and vibration goes away.

Out on the road again, the ghost vibration came back as soon as Gus, after two tries, reduced pressure on the third tire to normal. Gus smiled triumphantly,

Back at the Model Garage, he replaced the tire, after cutting into it to

prove his point to Pederson.

"You won't even be out the cost of a tire," he told the used-car dealer. "I handle this brand, and I'm sure the factory will be happy to replace this one."

That evening Alf Madsen drove in.

"I hear," he told Gus, "that you fixed this bus, after that knucklehead, Pederson, had monkeyed with it for weeks."

"Don't let the corporal kid you, Lieutenant," he said softly. "Pederson merely brought the car in here for an exchange on that faulty tire that was causing your trouble. Smart boy, that Big Bill."

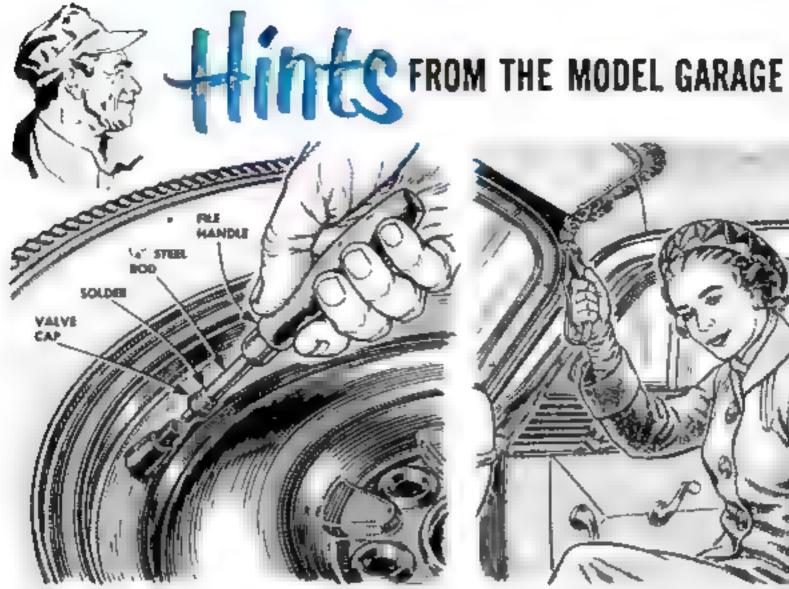

Too Much Talk, Says Gus

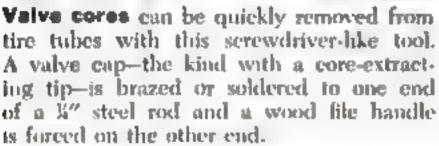

Madsen's eyes carried suspicion. Then a slow smile formed around his lips.

"I've known you a long time, Gus," he said. "I think that you can lie slicker'n anybody I know, when you want to."

"And I," Gus told him, a twinkle in his eye, "used to hold your little pink nose so you could blow it, Lieutenant, I think that you've been talking too much and too loud lately."

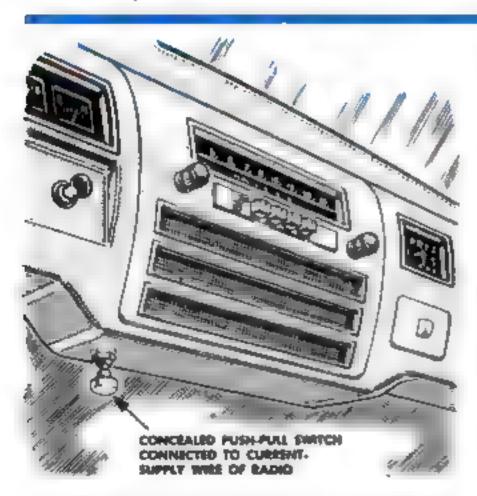

"Maybe I have, at that," Alf Madsen said thoughtfully, as he drove out. "Thanks a million, Gus."

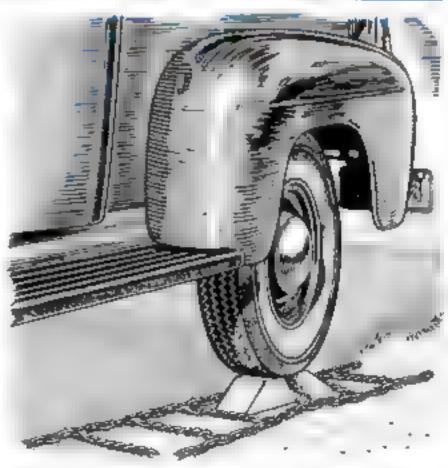

An extra hand strap added to the right front seat will make it easier to get in and out, and provide a handhold on rough and curving roads. Securing the strap to one of the screws that hold the sunshade bracket saves drilling new holes

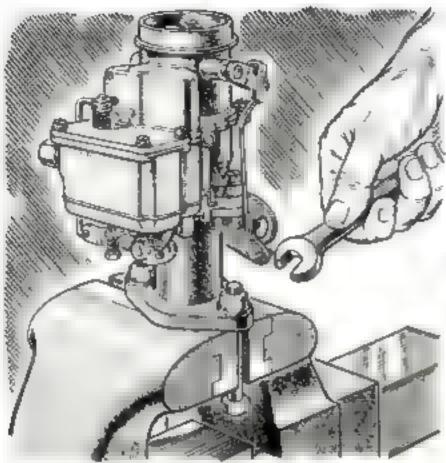

A car radio can be turned on and off without disturbing the volume control if you wire a separate push-pull switch in ahead of the regular one on the control. Position of the knob under the dashboard also helps prevent unauthorized use.

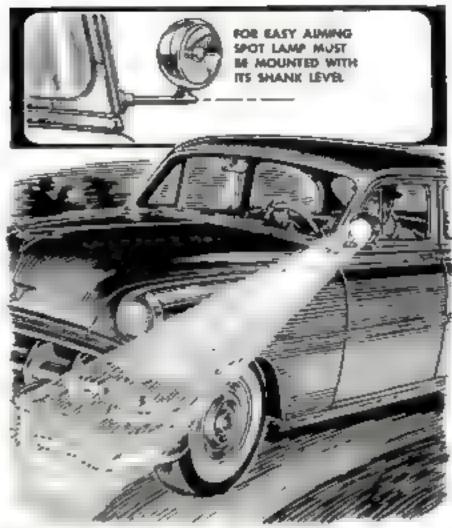

Tire chains can be quickly put on without jacking up the car with this ramp made from a 4"-by-4" notched in the middle. One cross link is laid in the notch and the wheel driven on top, leaving the chains loose at the bottom and easy to clasp.

MORE Hints from the Model Garage

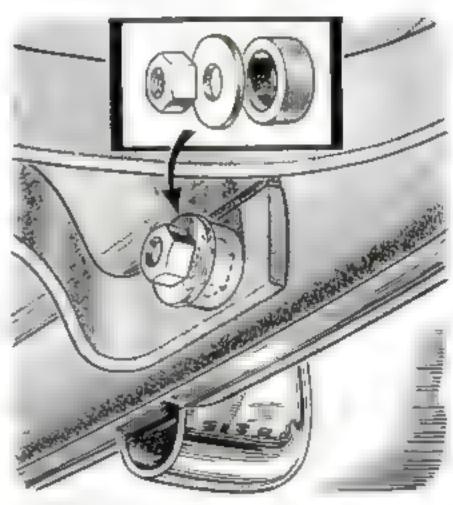

To hold a carburetor while you work on it, clamp two X" bolts in a vise and bolt the carburetor to these through the mounting holes in the flange. This will provide a very rigid work mount without danger of damaging the carburetor.

When mounting a spotlight, he sure to get the control arm level so the beam will stay level as you swing it. Wire the spotlight independently of the head lamps so that if the latter should fail, you still will be able to continue

Tail lights will shine brighter if you paint the inside of the lamp receptacles with white enamel to increase their reflectivity. This is especially helpful on older cars where the housings have become heavily rusted. Clean the metal thoroughly before painting.

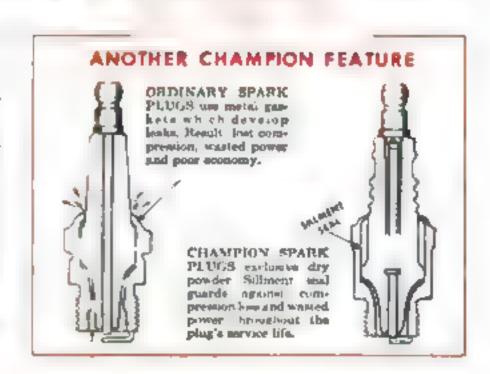

A frozen nut on a loose bumper guard can be bypassed this way on cars that have long guard bolts. Cut a short collar of pipe large enough to fit over the nut and slightly longer than the nut's thickness. Then add a new nut and washer and draw up tight against the collar.

MEXICAN ROAD RACE OR HOMETOWN TRAFFIC, YOU'RE AHEAD WITH CHAMPION SPARK PLUGS!

Today, because of higher compressions, good spark plugs are the key to top engine performance. With sweeping victories in the Mexican Road Race, Champion Spark Plugs once again prove their outstanding superiority under extreme driving conditions. Champions came through this gruelling I,912-mile run with dependability and performance to spare—powering the winning Lincolns in the large stock class, the winning Lancia in the large sports class and the Chevrolet, winner of the small stock class. These were strictly stock Champions, identical with those available at your neighborhood dealer.

CHAMPION SPARK PLUG COMPANY, TOLEDO 1, OHIO

CHAMPIONS

WILL MAKE ANY CAR RUN BETTER!

He Made a Fortune Fooling Fish

[Continued from page 136]

Burke. It lies at the end of a lovely bay of Lake Michigan, and among the forests and farms that stretch out for miles on three sides of it there are many lakes, all beautiful and all full of fish.

Burke began to feel better already.

Always conservative, though, he burned only half his bridges. He sold his home in Detroit, and he and Mrs. Burke bought a log cabin snuggled among pines and birches at the very edge of Traverse Bay.

He Made Hellgrammites at Night

But while his wife and one daughter moved there, Burke and his other daughter remained in Detroit, commuting 500 miles every weekend. He held on to his salaried job and turned out batches of corn borers, grubs and hellgrammites at night.

The Burkes sold \$13,000 worth of lures in 1950, topping off with a spectacular finish at the National Hardware Show in New York. There, with a homemade display set up on a card table, Burke raked in \$2,200 for his fish lures within a

few days.

With such exhibarating evidence of the salability of phony fish food, Burke be-

came his own boss. He launched his business with only \$500 worth of materials

and equipment.

Bedroom Doubled as Workshop

Throughout 1951, the log cabin beside Traverse Bay was both home and factory. By day, seven people, including Mrs. Burke, turned out fishing lures there. The lures were made in the utility room and spare bedroom, inspected and stapled to display cards in the dining room, packaged in the kitchen.

By 1952, when the annual sales of Burke's Flexo-Products, as they had now been named, reached \$65,000, the company moved out of the log cabin and into four rooms in the basement of a

Front Street drugstore.

One of that year's biggest orders came from Hollywood, and had nothing to

do with fishing. Paramount was preparing to make a picture titled Christopher cersus the Ants. One of the studio's executives had happened to see a display of Burke's lures, including a realistic red ant, in a local sporting-goods store. He suddenly wondered what it would cost to buy 500,000 of them, and had an aide telephone Burke to find out. Burke, by then hardened to the fact that Traverse City breeds practical jokers as well as fish, was inclined at first to regard the whole matter as a gag. But the staticshrouded talker in Hollywood was convincingly earnest. The final order, though watered down, was still huge. It called for 100,000 ants twice natural size and for 5,000 of them four times natural size. Furthermore, they all had to have steel shot in their noses, so that they could be moved about by hidden magnets.

Business Looks Good for '54

This year there is every evidence that Burke will sell at least \$100,000 worth of his plastic lures, which now contain 19 different models. A new minnow, a stone-fly nymph and a floating frog are soon to be added to the line.

Though Burke still uses the same basic plastic powder with which he started, he has steadily improved the mixing and curing formulas to improve the flexibility, color fastness, clarity and strength of his lures. Their color is remarkably natural, and Burke won't tell how he achieves it, for patents on the process are still pending.

The final test of any lure is whether it will catch fish, and Burke has delegated to himself the pleasant task of finding that out. He has tried his lures in the Boardman River, which flows past his office door; in California; in Canada; and in Duck Lake, a few miles back of Traverse City, where he has a cottage called "Burke's Retreat."

Here, while fat, inquisitive gulls drop in from Lake Michigan to observe the size of the catch, Charlie Burke happily conducts his research.

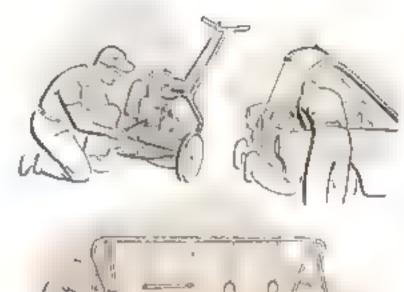

Start your collection of FINE TOOLS

With this Bonney Socket Set, you can make quick work of repairs and adjustments on lawn mowers and garden tractors, automobiles, washing machines and other household appliances.

Take a tip from professional mechanics who call Bonney wrenches America's finest—make Bonney your choice. Start with a Bonney No. AA8 Standard Series Socket Set. Then add to your collection of fine tools from time to time by buying the Bonney wrenches you find most useful. They're available in open stock or complete sets. Ask your dealer for Bonney. If he doesn't have the No. AA8 Socket Set in stock, he can get it for you. Or write us direct.

Note / The economy-minded home mechanic or hobbyist will find Bon-E-Con tools especially suited to his requirements. They are tools any man would value at prices anyone can afford. And Bon-E-Con tools carry the same guarantee as Bonney tools.

Choosing the right projector for your family color shows

IF you're a color slide fan—or about to be—you know that color slides are rewarding for yourself and enjoyable for your family, too. Yet much of the pleasure you receive depends on the projection device you buy.

Projector, table viewer... or both?

Naturally, you don't need a high-powered auditorium-type projector for a small living room. And it takes more than the minimum-powered projector to do a job, say, in a large family recreation room. It's possible you'd be just as happy with a table viewer as with a large picture projected on a large screen. Many color slide fans have both—a projector for a family show, and a table viewer for "quickie"

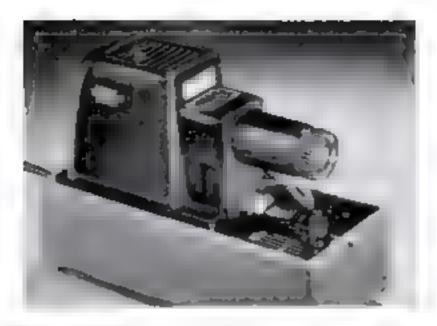

showings or editing slides in the living room under normal light.

Get a demonstration

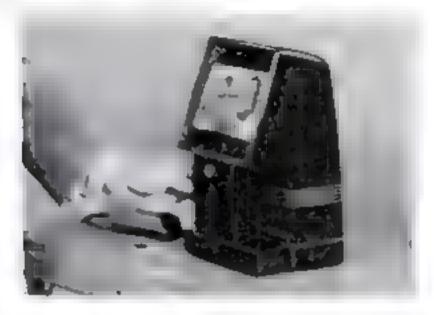

When your dealer demonstrates the Kodaslide Projectors and Table Viewers shown on the opposite page, you'll find they flood your color slides with brilliant light, even to the extreme edges of the picture. You'll see each detail crisp and clear, thanks to unique optical systems developed by Kodak optical engineers. And slide changing is easy—even in darkened rooms.

Your Kodak dealer is there to help

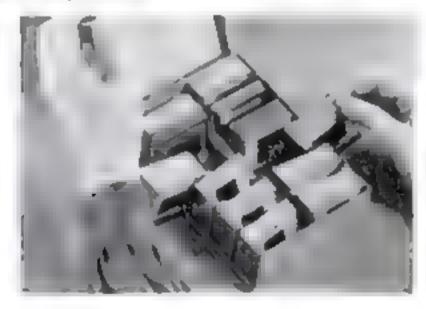

Talk with your Kodak dealer about your personal needs—have him demonstrate—and you'll find it's easy to choose the right slide projector or viewer.

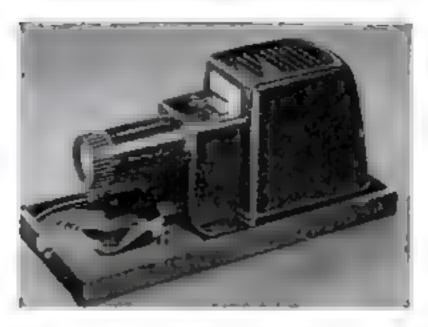

Kodaslide Highlux III Projector—Has a brillant optical system, powerful 300-watt lamp, gives new life to your color slides. Quiet motor-driven blower cools slides. New-type slide feeder in top prevents jarring instrument when changing slides. \$56.50. Highlux II is 200-watt model without blower. \$36.50.

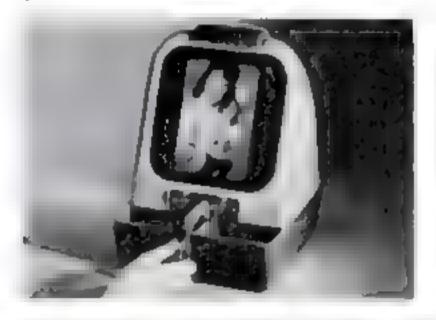

For small group showings—Kodashde Table Viewer 4X combines projector and screen in one handy unit. Enlarges color slides more than 4 times, shows them brilliantly even in lighted room. Only \$37.50.

Easy way to store slides—Kodashide Compartment File has 12 handy swing-out compartments. Stores 240 cardboard or 96 glass slides. You'll appreciate the handy index made cover for subject reference. \$3.94.

Economy projector—Kodasiide Merit Projector shows your slides with bright, even illumination. Aluminum baffles keep slides cool, Built-in elevation device, easy to operate. Slide-feeding on top prevents jarring instrument. Includes fine Kodak Projection Ektanon Lens, 5-inch 1,3.5. \$24.65.

Deluxe viewer—Kodashde Table Viewer, Model A, has Day-View Screen for brilliant images. Takes 75 cardboard or 30 glass slides. Push-pull changer advances slides, turns light on and off, restacks slides. \$97.50.

New file for an evening's show—Kodaslide Ready-File is compact, handy for carrying, Holds 200 cardboard 2 x 2 mounts or 100 stereo cardboard mounts. Keeps slides in groups, the way you project them. Index in cover, \$1.95.

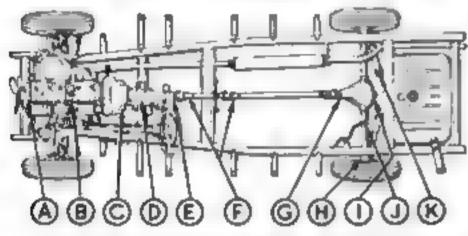

Prices are list, include Federal Tax where applicable, and are subject to change without notice

LOOKING FOR OIL LEAKS

After a long cold winter, gaskets may shrink, bolts may loosen, oil may leak on your garage floor. It is important to locate these leaks and correct them.

A. May require a new timing chain oil seal or new oil pan gaskets.

New oil pan gasket.

C. If engine oil, a new rear main bearing oil seal may be needed. If oil is black and heavy, you may need a new transmission front bearing oil seal.

D. Transmission oil leaking here may call for a new transmission cover gasket or a new speedometer

drive gear oil seal.

I. Transmission oil here calls for a new transmission rear bearing oil seal—also indicated by oil thrown across the under side of the car body.

You may need to replace the U-joint rubber boot.
 Oil leaking from front of rear axle calls for replac-

H. When inside of wheel is covered with axle oil, the outer end of the axle oil seal needs replacing, lest

 t cause brakes to grab, which is dangerous.
 May require rear axle inspection cover gasket, or merely tightening the plug. If filler plug ferrule is loose in housing, spot welding is needed.

J. Rear axle oil leaking at hydraulic brake fitting may call for removing brake liner and tightening or replacing fitting; then bleed brakes.

K. Oil leaking from shock absorber usually calls for replacing the whole sealed unit.

Watch for oil leaks and correct them, as oil can cause costly damage on parts where it doesn't belong.

YOURS FOR THE ASKING

Write for your free copy of the helpful illustrated manual, "MORE POWER, Less Gas, Less Od." It may save you real money. And when you re-ring, must on Sealed Power KromeX Ring Sets, with chrome top compression ring, chrome rails on oil ring, and the famous Full-Flow Spring KromeX Ring Sets are factory-seated for fast break in and immediate oil control. Sealed Power, Dept. H-3, Muskegon, Mich.

Sealed Power

Patients Enjoy This Hospital [Continued from page 128]

hampers for linen disposal, and X-ray view boxes.

Staggered between stations are sterilizers, stoves, refrigerators and supply depots. "Whatever you need," said Nurse Brown, "is stored where you need it."

Waldorf-Like Wards for Convalescents

But gadgets and architecture are not the only steps forward in the Kaiser Hospital. There's a difference in attitude, especially noticeable on the hospital's sixth and seventh floors. These are called "hotel floors," and are for convalescents.

On a typical sixth-floor morning, for example, Raymond Hayes wakes from a deep sleep, yawns and flips a switch at the head of his bed. "Desk," comes from the speaker over his head.

"Good morning," says Mr. Hayes.

"What time is it?"

"8.25," says the speaker.

"Lovely morning," says Mr. Hayes.
"I think I'll take my breakfast in the lounge."

"I'll tell the maid," says the speaker.

Later, after a brisk shower in his private bathroom, Mr. Hayes samples his bacon and eggs from a special vacuum-packed tray. "This," he says as he watches his favorite television newscaster, "is what I call the country-club life."

Trip to Surgery Made Less Dreary

Surgical patients have all the conveniences offered to new mothers, with the exception of private instruction on the care of Baby, and they have a few benefits of their own.

They are wheeled into surgery through back doors, so that they see very little of the mechanics involved and cannot see other patients. Instead of the usual wheeled stretcher, the patient arrives on a special recovery bed. After the operation is over, he is lifted directly from the table onto his bed, saving an awkward step in the usual routine.

Instead of being taken to his own room

[Continued on page 26-1]

How to reduce workshop noise

It's easy to turn your workshop cailing into an efficient sound-muffler by installing Armstrong's Cushiontone or Perforated Temlok Tile. These perforated wood fiber tiles absorb noise as it strikes the ceiling. You can install these noise-quieting tiles yourself.

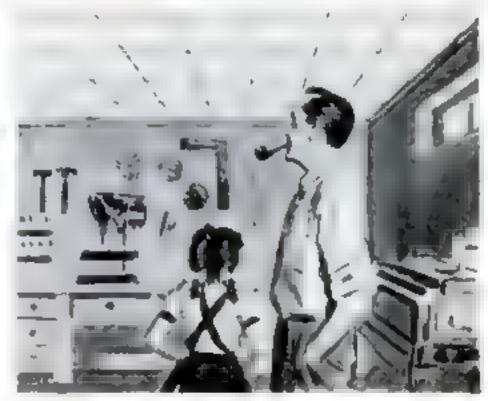

Your choice of two materials. Armstrong's Cushiontone, which comes in the attractive full Random design, absorbs noise most effectively. Perforated Temlak Tile—besides reducing noise—is the easiest and fastest to install.

2 Furring strips provide a base for Installing tiles. Start by nating seasoned wood furring strips at right angles to joists on 12" centers. Wood furring should be smooth, level, and solidly nailed. Shim where necessary to produce a level surface.

3 Shallow-drilled holes in each corner of Cushiontone take flathead or collar nails. Nailheads should be 1/4" to 3/2" in diameter. Wide nailing flange on Perforated Temlok Tile allows for nailing or stapling. Special joint hides nails or staples.

4 In a few hours you can install an attractive, noisequieting ceiling of Cushiontone or Tamlok Tile in your basement workshop. Both tiles are prepainted and washable. You'll want sound-conditioning ceilings in your playroom and kitchen, too.

For a free booklet on Armstrong's Cushiontone and Temlok, write Armstrong Cark Company, 3908 Washington Avenue, Lancaster, Pennsylvania.

What You Could Do With

DELTA 14" BAND SAW—used in leading industrial plants for its accuracy, long life, and quick availability of parts and accessories. Built to high precision standards, but not high priced. See it demonstrated at your nearby Delta Dealer's.

Micrometer adjustments of blade guides make possible eccurate work, yet allow blade to run free. Guides and blade supports adjust independently.

Big table tilts 45° right and 10° left Braced by two massive frontions for maximum rigidity to support beavy work—an exclusive Delta feature.

Height attachment accessory exclusive with Delta—increases the capacity of your Delta 14" Wood Cutting Bond Saw from 634" to 1234" under the guide.

Bolto Homograft 10" Band bay

Finest saw made for the smaller house shop. Rugged, accurate—cuts 6" in hardwood smoothly. See it at your Daha Dealer, or at leading department and hardware stores.

DELTA QUALITY MAKES THE DIFFERENCE!

This DELTA Band Saw!

Make complicated curved cuts easily, in wood or plastic . . . re-saw accurately . . . rip, cross-cut, or miter-cut stock too thick or wide for your circular saw . . . do and make countless things that were before impossible! Once you own a band saw, you'll wonder how you ever got along without it—if it's a Delta.

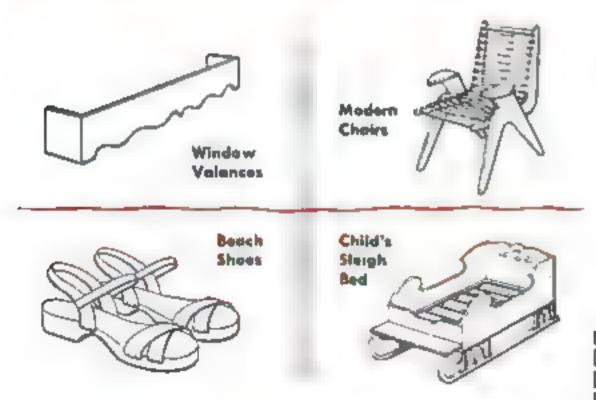

Delta Quality Makes The Difference

Into every Rockwell-built DELTA Band Saw goes all the experience, the precision-accuracy—all the solid quality—that have made Delta Power Tools leaders for exacting industrial use. In fact, the 14" Delta Band Saw pictured at the left is the same model used in countless modern production plants. It's built to last, simple to adjust, foolproof to handle—and safe. Delta-engineered accessories make the versatile band saw even handier to have around, add a lot to your fun and satisfaction, save you more money by allowing you to do more jobs.

Delta quality costs no more than "second best" so why gamble your money? See the Delta Band Saw demonstrated; ask your dealer about his easypay plan. And send the coupon today for helpful

Delta literature.

Hard cuts are easy—on your Delta Band Saw Make dozens of interesting new projects

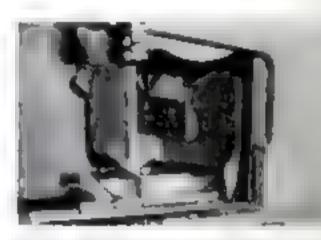

DELTA QUALITY POWER TOOLS

Another Product by ROCKWELL

Make hundreds of different curved cuts quickly and easily for professiona looking furniture, toys, etc. Precision Dello workmanship makes it easy to follow lines on difficult cuts.

Re-saw accordists, rip and trass-cut slock too big for other saws. With Dutto Height Attachment accessory you can increase especity from 614" to 1214" under the guide—an extra offered only by Delta!

With the handy Sanding Attachment—exclusive with Dalta—it's simple to give that all-important professional finish to edges, roll curves and other hard-to-get-at places. Makes your Dalta Sand-Saw more useful then ever.

Animals Protect Themselves

Normally of a very timid nature, a Doe will fight feroclously and effectively

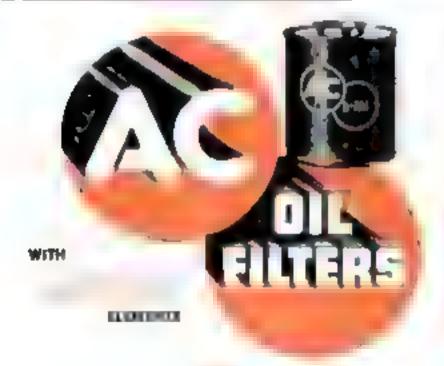

to protect its Fawn against attacks of Rattlesnakes and other natural enemies.

AC ALUVAC PROTECTS MORE NEW CAR ENGINES THAN ANY OTHER BRAND

Every car engine has its natural enemies too the dust, durt, grit and sludge that collect in motor oil—ready to attack smooth-surfaced bearings, pistons and other precision parts.

AC's Alucac Element provides proved protection against these engine oil enemies. Its special accordion fold gives ten times the filtering area of ordinary elements, and its specially formulated filtering material acreens out particles as fine as 1/100,000 of an inch.

Change your oil filter element at from 4000 to 6000 miles—and change to AC Alwac to make your car's engine run better, longer.

CIDICAL MOTORS CONFORMS

Patients Enjoy This Hospital (Continued from page 266)

after surgery, the patient is wheeled to a special recovery room, where he remains until he has gone through any of the first reactions to the operation and to the drugs used. A nurse stands by in the recovery room at all times.

Even the hospital's meal system is unique. In the modern basement kitchen, a new machine superheats glass dishes. These are popped by an asbestos-gloved attendant into a rubber-insulated metal shell, then carried on a conveyor past the cooks, who serve each plate while the dietitian supervises.

Patient Gets Food While It's Hot

At the end of the assembly line, a rubber-lined metal top is clamped onto the bottom shell, forming an insulated package, which is still steaming hot when it reaches the patient on one of the floors above. Food is served from a stainless-steel and glass cart, which carries huge vacuum containers of soup, coffee and boiling water.

All this medical high life costs no more than ordinary hospital care. The hospital itself cost \$3,000,000 to build and has 224 available beds. This is considered a reasonable price in hospital circles. A semiprivate patient pays \$15 a day, and \$22 a day is the tab for a private room. The new father shells out only \$140 for all hospital expenses during his wife's confinement.

Gone, in the Kaiser Hospital, are six a.m. awakenings for temperature-taking and meals. Breakfast is served at 8.30 after a leisurely awakening. Visitors are not viewed with distaste and suspicion, but encouraged. Visiting regulations are stretched and forgotten, if there's a good reason.

"After all," Nurse Brown summed it up,
"we're here to help these people." END

264 POPULAR SCIENCE

"Your best buy in power saws is MAXAW 700 with magic pivot"

says Paul Jones, President, Cummine-Chicago Corp.

The Cummins Maxaw 700 I'm using makes that all-important 45° cut in 2 x 4's—with blade to spare. It makes every cut for every house. In fact, on a dollar-for-dollar and pound-for-pound comparison, the Maxaw 700 outperforms every saw in the 7" field. Yet it's so perfectly engineered that it weighs only 10 pounds—much lighter than other saws in the 7" field.

There in a nutshell is the amazing story of Maxaw 700 with magic pivot.

The man who brought about the engineering miracle of Maxaw with magic pivot in Fred Wappat, often referred to as the "power saw Edison." Mr. Wappat pioneered the portable power saw and was responsible for many of its early developments, one of the most notable being the telescopic guard.

But his greatest achievement—and the greatest made by any one individual in the power saw field—is the magic pivot in Cummina MAXAW. Now, here is precisely what magic pivot does:

Blades last twice as long

magic proof gives the saw blade of your Maxaw greater cutting depth at 45°, you get blade to spare. Maxaw blades will take three to four more sharpenings than blades of similar diameter used on other industrial saws. This means magic proof lets you use blades twice as long.

"Stub-radius" blades reduce friction, shock

magic pivot permits Maxaw to use "stubradius" blades to do the same cutting jobs as heavier saws with larger blades. With "stubradius" blades there is less leverage re-acting on the saw mandrel shaft. Therefore, there is less shock transmitted to the gears, ball bearings and armature of the saw.

Puts more power at cutting edge

Power always diminishes as it reaches out from the saw shaft to the blade cutting edge. With magic pivot which enables you to use "stubradius" blades, distance from the power shaft to the cutting edge is shorter than with larger blades. Result—you get more power where you need it—at the cutting edge.

Less bulk—less weight handicap for user

magic pivot reduces the handicap you place on a man on the job. A 1200-lb, race horse is handicapped with an average of 1 to 10 lbs, of lead, He works only a few minutes in each race. A man weight from 150 to 200 lbs. He climbs ladders, roofs . . . is on the move 8 hours a day. He's handicapped on the job with anything but the lightest weight saw—the Maxaw 700 weighing only 10 pounds.

Mister, if you want a power saw that saves you time, money and energy, you want the Maxaw 700 with magic pivot. It's perfectly balanced to stay on the cutting line, guides itself without pulling or wavering. This is the portable saw priced for the home handyman as well as the professional user. Imagine being able to get all this performance in an all ball and roller bearing 10-pound power saw-for only \$69.50. That's right-only \$69 50 buys you the finest power saw in the 7" field-the Maxaw 700. Ask for Cummins Maxaw 700 at your hardware or lumber dealer's. Don't settle for anything less. I'll be glad to send you our fully documented folder: "What magic pivot Means To You." Every man who is interested in portable electric saws should read it. Please write me today.

Sincerely,

PRESIDE

Sun Furnace Goes to Work (Continued from page 133)

Experimental solar houses, heated mostly or entirely by the sun, show promise, and will look much more interesting if the necessary investment—still higher than for an ordinary heating plant—can be reduced. For heating homes and hot water, mirrors or lenses aren't needed. Temperatures up to 400 degrees F. can be obtained in flat-plate collectors, essentially glass-covered boxes lined with black-painted metal, through which water or air circulates to be heated.

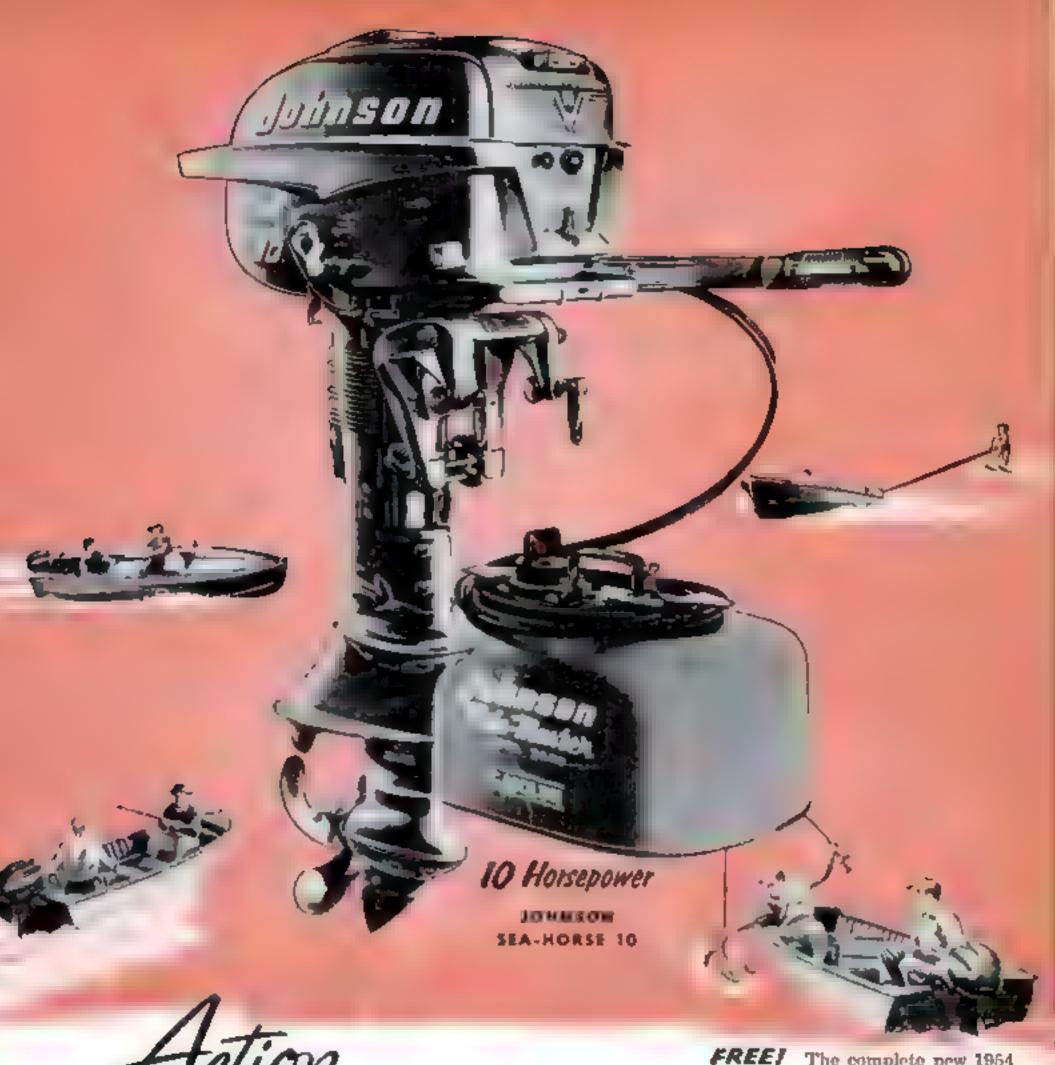

Steam engines can be run on solar power, as Dr. Charles G. Abbot of the Smithsonian Institution has demonstrated in his pioneering experiments. So far, though, it's an expensive way—an Abbot boiler with a mirror large enough to produce two horsepower would probably cost about \$1,000. Heat engines that could run efficiently at lower temperature than conventional types, dispensing with the mirrors' cost and complications, would be another story. That's something for inventors to work on.

Sunshine into Electricity?

A miniature "sun motor" exhibited not long ago by Charles F. Kettering, General Motors research ace, demonstrates the future possibility of turning sunshine right into electricity. Enough current to spin it is generated when a candle flame heats a tube bristling with twisted wires, or when a lamp's beam is directed on a bank of photovoltaic cells.

Twist together the ends of pieces of copper and silver wire, heat one of the two junctions, and current will be generated. This is the effect that a thermocouple applies to operate the temperature-indicating meter of an electrical pyrometer. Voltage and current can be multiplied to substantial figures, by connecting many thermocouples and heating one set of junctions. So it's easy, in imagination, to picture a solar power station where acres of thermocouples turn the sun's rays into free kilowatts. The catch is their notoriously low efficiency as en-

ergy converters, although improved thermocouple alloys have lately raised the figure considerably.

Unlike photocells that merely control current from an external source, photovoltaic cells actually generate current, when light falls upon them. Camera fans' light meters employ photovoltaic cells. While a selenium or copper-oxide cell of this type may convert as much as 12 percent of light of some wave lengths into electricity, its low over-all efficiency compares with that of a thermocouple. Eventually the figure may be bettered but, as Dr. Harrison comments wryly, "Scientists must understand matter and energy much better before we can count on charging our automobile batteries from thermoelectric or photoelectric generators on the garage roof."

Improving on Nature's Way

There remains the chemical route to harnessing solar energy—tried and proved by nature, long before man came along to puzzle over the problem. All but five percent of the energy we use, including the coal we burn and the food we eat, has at some time been stored by photosynthesis in plants, which captured it from the sun. Can we do better than plant wheat, or corn, or sugar cane, on farms and plantations, and let nature take its course? Some think so,

It may have been a preview of the future when a crop consisting of 100 pounds of dried, microscopic plants was harvested at Cambridge, Mass., not long ago, for the Carnegie Institution of Washington.

The odd product consisted of myriads of single-celled algae of a kind called Chlorella. They had been grown in water containing suitable salts, circulating with carbon-dioxide gas in a plastic tube, while sunshine poured in through the tube's walls.

Experts predict an acre's yield of food could be multiplied manyfold by growing Chlorella in tanks, instead of planting

the soil at all. The dried or frozen product, we're assured, forms a nourishing paste with "a delicate grassy flavor." And if our palate isn't progressive enough to fancy such ultramodern fare, we can feed it to cattle or poultry, and be rewarded with old-fashioned steaks or fricassees in abundance.

Cerium Salts Get into the Act

Finally, the chemists are talking about bypassing biological processes entirely—and capturing sunshine right in flasks and test tubes! Sunlight is known to produce various chemical reactions, as when it turns blank film into a portrait of Aunt Ella. More promising for delivering useful quantities of energy is a photochemical reaction exhibited by salts of cerium dissolved in water, which Prof. Lawrence J. Heidt of MIT has been investigating.

The cerium salts' ions can take on two forms, called cerous and ceric. When sunlight acts on the solution, they change from one form to the other—and then back again. This might seem to get no-body anywhere, But, in the process, some of the water decomposes into elementary hydrogen and oxygen. The over-all result is that, with the cerium salts playing the role of catalyst, sunlight breaks down water into gases that can be burned for fuel.

We're still a long way from drawing the plans for a solar-powered gasworks. One percent would be a generous estimate of this reaction's efficiency in converting solar to chemical energy. But it's a break-through on a new front, one more promising approach for future experimenters to explore.

Not Guilty

When a woman motorist was called upon to stop, she asked the motor cop indignantly, "What do you want with me?"

"You were going 60 miles an hour," accused the officer.

"Sixty miles an hour! Why I haven't been out an hour," she replied.-Link Belt News. Look what you can do with this New Black & Decker Saw!

THE NEW 130-h.p. Y-block V-B

The story behind Ford's "W" and "I"...

the two most modern engines in the industry

Twenty-two years ago Ford introduced the first V-8 in the low-price field. The basic design innovation then was the one-piece cylinder block . . . a design characteristic that has since been adopted by all other builders of V-8 engines. And now, with 22 years' experience building V-8's, it is only logical that Ford is first in its field to introduce a brand new type of V-8 . . . the Y-block V-8—along with the industry's most modern Six . . . the I-block Six.

Deep-block construction

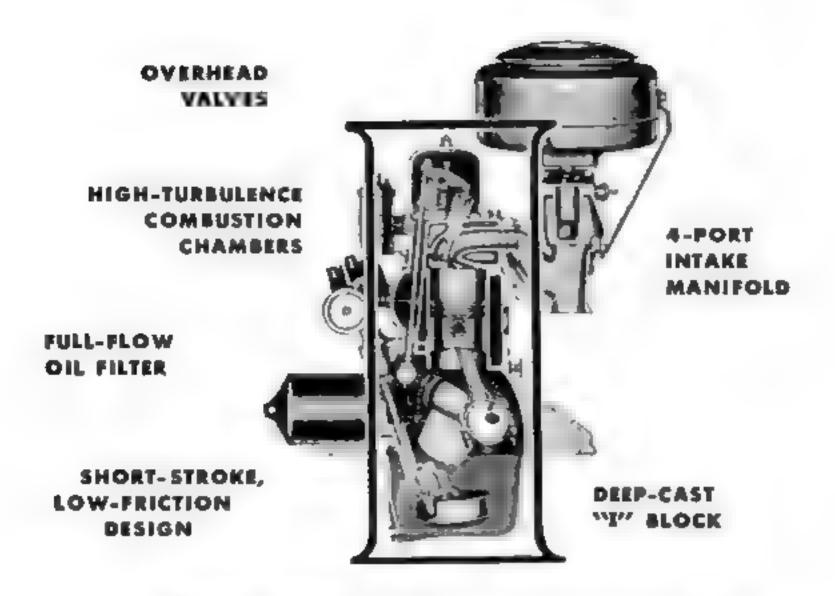

Both engines have extra-deep blocks that

extend well below the crankshafts, forming the "Y"- or "I"-shaped cross-sections. This results in far more rigid support for the crankshafts. Operation is far smoother and quieter, engine life far longer.

Free-turning overhead valves

Both engines have overhead valves that, in conjunction with their new intake manifolding, permit free flow of full fuel charges to all cylinders for more responsive performance. Valves are free-turning to help maintain their tight seal, keep compression high for continued top efficiency.

Try the " γ " and " γ " at your

THE NEW 115-h.p. I-block SIX

Short-stroke, low-friction design

Both engines are "oversquare," that is, the bore is greater than the stroke. The shortstroke design means less internal friction, more usable power from every drop of gas.

Full-flow oil filter

A full-pressure lubrication system with fullflow oil filter forces completely filtered oil to all vital bearing surfaces and engine parts. Engine wear is reduced up to 66%. Base-mounting of oil filter eliminates external oil lines

Choice of engines

Either the Y-block V-8 or I-block Six is available in any of Ford's 14 brilliant new body styles . . . and you may choose Fordomatic Drive or Overdrive, if you wish. Stop in at your Ford Dealer's soon and Test Drive a '54 Ford with either of these great new power plants.

ON USING L-O-F SUPER-FINE FIBER-GLASS

Here's a new insulating product of "1001 uses." Wonderfully easy to handle and apply. And so versatile, so effective, you'll find uses for it in a dozen places 'round the house.

Bave fuel by wrapping fraresistant Super Fine acound your heating ductal Highly efficient heat implation. Flexible, lightweight, easy to install,

Reduce dripping from cold water pipes. Reduce heat loss from hot water pipes, Spiral wrap them with Super Fine. Will not culdew or rol.

L.O.F Super Fine installed under the hood of your car reduces airborne noise, tire white and air-stream whitele.

Sound-insolate your home workshop! L.O.F. Soper Fine provides excellent sound absorption. Cuts easily with scanors or knife.

Get L.O.F Super-Fine at your favorite hardware dealer's, where this rack is on display. If your dealer doesn't have it, write Libbey Owens Ford, Fiber-Glass Division, 4934 Wayne Building, Toledo 8, Ohio.

FIBER-GLASS

Needle to Stop Deadly G-Gas

[Continued from page 146]

looked at Kathleen and she nodded. This was something we had to do."

The profit-minded Hirsch kept Potter busy filling orders for flow meters. When several weeks passed without progress on the injector, the Conscience, Miss Ruch, caught Potter's attention. She reminded him that he had been postponing month after month some minor, but necessary, surgery. If Dr. Sarnoff arranged for the operation at Harvard's hospital, couldn't Potter work on the injector while he convalesced? He could.

Simultaneous Operations

That was how the injector came to be designed by an aeronautical expert in a hospital. Potter was operated on one day, rested the next, then started sketching in bed. Sketches and experimental models were shuttled back and forth between the Boston hospital and the Newark plant. When Potter was discharged from the hospital a week later, the automatic hypodermic needle existed in pretty much its finished form.

"Hirsch was right about our losing money," Potter says. "I figure the job has cost us \$50,000 so far."

Potter frankly admits, however, that he stands to recoup this and much more. He made 1,500 injectors on a pilot contract for Army field trials, and has similar orders from the English and Canadian governments. Wartime demand would be astronomical—one injector for every man, woman and child. Peacetime prospects appear profitable, too. A reliable automatic injector would be handy for diabetics, who must give themselves regular shots of insulin. And doctors and dentists, too, might find it useful when treating patients who quake at the sight of a needle.

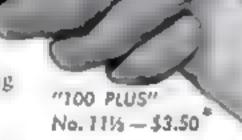

Telling the Truth

When the lady who was making out a job application came to the little square headed "Age," she didn't hesitate. She simply wrote. "Atomic." Phoenix Flame.

Ask your hands to tell you

You don't have to be a carpenter to want, yes, even to need — fine tools. Put a Stanley tool in your hands. Use it. You'll feel the difference. For everyone from schoolboy to professional Stanley is the toolbox of the world

Tool UP With Stanley Take this "100 PLUS", for example. Sure, you can drive a nail with almost any hammerone way or another. But your hands will tell you this one. It hits the nail hard, and drives it straight and deep. You'll get a smacking. sense of satisfaction every time you use it.

Measure UP With Stanley

*Western prices slightly higher,

6 ft. - \$2.75

A good fule is a must, and a new favorite is this Stanley '100 PLUS', It's a good friend, many times tested and all ways true. The joints lock firmly, the square ends stay square, the handy 8-inch brass slide slides but never slips, the easy-to-read numbers are always easy to read. For more than a measure of satisfaction, say Stanley the next time you buy a rule.

Tool UP With "YANKEE"

No. 41 - \$5.65

The "Yankee" push drift is a quick, onehand worker . . . the ideal tool for boring screw holes. The drill point spirals in easily and the built-in spring returns the handle for the next stroke You're through in no time. What's more, the magazine handle holds 8 drill points from V_{10} to V_{34} inch — the size is always right.

THE TOOL BOX OF THE WORLD

How Long Is Your Square Tongue?

Sure that's a silly question. But if you haven't a steel square you'll never know. On the other hand, with one of these Stanley rafter squares you can really get on top of things - build a roof, for instance, on your new porch or garage. Send for your free copy of "Rafter and Framing Squares". You'll learn all about roof framing, common rafters, hip and valley rafters, brace measures, etc. Use the coupon.

*The Stanley rafter square tanque is 16" long.

276 POPULAR SCIENCE

Magnetic Clutch [Continued from page [51]]

a fast power shift from low to second. Then quickly the two clutches traded places again and away you went in second. In effect, the engine is "held against" high for the fraction of a second needed for a shift. This has the double virtue of holding down revs in the momentarily unloaded engine and of minimizing torque discontinuity.

The events are rather as though the transmission said to the engine, as time for the shift neared, "Look, chum, you'll have to lay off those gears while I slide them around a bit. It won't take long, but just so you don't go revving up, I'd be obliged if you'd work on high gear for a moment. I know you aren't ready for high just yet, but if you'll do it anyhow, I'll be right back with a dandy new ratio."

Laddering. Since the clutches can be pulsed to produce this high-speed turnabout, there's no need for a break in the power flow for shifting. It's done in a torque path that is temporarily off duty.

Eaton has a four-speed transmission that shows this. You start in low via one clutch. Pretty soon this trades with a second clutch that's ready with second gear. Then the first clutch pairs up with third gear, and while it's working, the second clutch gets set with fourth gear. Company engineers describe this as "laddering," meaning the transmission does what you do when you climb a ladder with each foot touching alternate rungs.

This is much smoother, of course, than the half-step procedure when each foot rests on each rung. In a car, with smooth clutches to bridge the change-overs, it gives performance almost indistinguishable from the oiliest hydraulic job.

When can you buy one? Eaton doesn't know, but thinks maybe in a year or two. The company, which is highly respected in Detroit as a maker of valves, pumps, springs, heaters and truck axles, has already shipped prototype clutches to the automakers for testing. There seems to be little likelihood that the

CHAMPION DIARMENT TOOL CO. . MEADVILLE PA.

Magnetic Clutch [Continued from page 2.6]

clutch will be sold for installation on existing cars; it wants to be put in at time of manufacture.

Present estimates are that the "poor man's automatic"—the one-clutch semi-automatic job—will be used on trucks and taxis in this country, and on passenger cars abroad. (High fuel costs overseas have held back acceptance of gas-hungry hydraulic transmissions.) In this country, Eaton thinks that three- and four-speed full automatics will be preferred. It believes that they will cost less to make and run than hydraulic jobs, and will give better performance.

Magnetic-powder clutches in small sizes are due to appear in 1954 on the compressor drives of auto air conditioners, and on the hubs of engine fans. The fan application is attractive: an ordinary radiator fan can eat up three or four horsepower at high speed, and contribute a big share of total engine noise—all for cooling that's needed only a small part of the time. On a car fan, a magnetic clutch would be automatically switched by a thermostat.

Any bugs? Apparently not. Eaton won't quite claim that the magnetic powder will never wear out—though they do say they haven't been able to wear any out in years of trying. The clutch will withstand an incredible amount of slipping.

If the magnetic-powder clutch is as good as it looks, it will give those intricate, gas-greedy hydraulic boxes a whale of a run for your money.

Ground Speed, Too

An old gentleman was riding in an airliner for the first time. At Phoenix, Ariz., the plane made a beautiful landing, and immediately a red truck rushed alongside to refuel it. The next stop was Fort Worth, and again a red truck came up. The same thing occurred at Nashville.

A fellow passenger said to the gentleman, "These planes certainly make wonderful time,"

The old man replied, "Yep, And that red truck ain't doing so bad, either."~Fireman's Fund Record.

1.1.

The Hardest Metals Made by Man [Continued from page 162]

But tungsten-earbide bits drill up to 400 times as much hole-footage as steel before showing wear, may provide the key that will unlock our low-grade ores. And the Mesabi's low-grade fields, it is estimated, contain enough iron to meet the nation's requirements for centuries—one answer to the gloomy prophets who predict the earth's imminent depletion.

One Carbide Bit Beats 284 Steel Ones

Not long ago a Pennsylvania soft-coal mine placed one of the new carbide bits in service alongside one made of steel. The new bit speedily outdistanced the old type, drilled on and on while 284 successive steel bits blunted and had to be discarded. Thanks largely to the carbide-tipped mechanical equipment already in use, the average American soft-coal miner now digs seven and a half tons a day as against five tons before World War II.

Far more spectacular increases will soon be achieved with the new "continuous miners"—molehke carbidetoothed mechanical monsters that crawl along on caterpillar treads, bite out their own 20-ton weight in coal every 10 minutes, and multiply production per underground worker as much as 10 times.

At America's biggest gold mine—the famed Homestake in South Dakota—carbide rock drills have doubled recovery of pay dirt. And on the Canadian Northwest's fabulous Kitimat project, carbide-equipped crews are drilling a steep 10-mile tunnel through the heart of a mountain, to carry the water which will power the largest aluminum smelter on earth. Last winter they smashed the world's all-time tunneling record, ripping the big Kitimat bore—tall enough to accommodate a two-story house—through 282 feet of living granite in a single work week.

In the oil fields, too, carbide bits drill many times more footage than steel bits

[Continued on page 282]

Rotaries or Reel Types...Gas or Electric Powered

Any of the five SAVAGE power mowers, rotaries or reels, wins the nod from lovers of good lawns. Know why? It's because SAVAGE'S gunsmith craftsmanship means better built, more dependable power mowers. It's true. Precision SAVAGE power mowers cut lawns quickly and easily...less "lawn-time" means more time for leisure. Your SAVAGE will

give you extra years of satisfaction with minimum upkeep.

Check and compare these features and you'll choose a SAVAGE: More rugged construction ... exclusive "Sta-Temp" blades ... adjustable handle with exclusive hill-climber book ... simple cutting-height adjustments ... Briggs & Stratton 4-cycle engines ... Timken real bearings, "Self-Lube" wheel bearings ... gas-powered rotaries feature "Toe-Tip" safety handle-latch to prevent roll-back on slopes ... Electric rotary has two-way handle, ½ hp 3450 rpm motor.

LEAF MULCHER—Supplied with both gasoline-powered rotaries at no extra cost. Easily attached. Pulverizes leaves to small particles. No leaf raking, carrying or burning.

Write for SAVAGE folder on easier lawn care and facts and pictures of full SAVAGE line of power and hand lawn mowers.

SAVAGE ARMS CORPORATION - Laws Mower Division - 103 Broadway, Chicopee Falls, Mass., U.S.A.

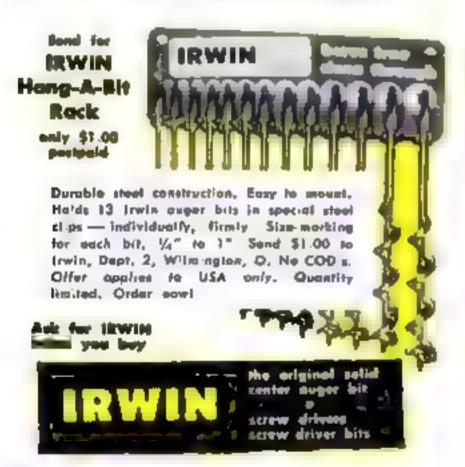

be the proud owner of this IRWIN solid center

bore holes easier, faster, cleaner

A time-saving, money-saving investment for hobbyist, professional, or handyman alike. Original solid center design for extra stability, extra accuracy, easier boring action. Made of special bit steel, heat treated and hardened full length to stay sharp. Brightly polished for good looks, pride of ownership. Carefully balanced for that good-to-work-with feel.

A practical investment for yourself. Makes a wonderful gift, too. Also available in 6 and 10 bit sets in hardwood chest, colorful plastic roll sets and individual sizes, ¼" to 1½". See your independent hardware dealer soon. The Irwin Auger Bit Company, Wilmington, Ohio.

The Hardest Metals Made by Man [Continued from page 280]

before replacement. Since it costs \$200 an hour to run an oil-well rig, carbide bits make oil prospecting a less costly gamble than it used to be, may speed the search for new American oil reserves.

Titanium Carbide May Be Wonder Child

Today's jet engines operate at about 1,500 degrees Fahrenheit. If the operating temperature could be raised, the engine's power would be greatly increased. But where do you find an alloy capable of withstanding such a superengine's 2,200-degree furnace breath? In laboratories all over the world the race is on.

At least one major American carbide producer thinks that it may have the answer already—in a remarkable cross between carbon and the "wonder metal" titanium. Like its titanium parent, titanium carbide is one-third lighter than steel, two-thirds lighter than tungsten carbide.

Moreover, being the hardest of all the cemented carbides, it is the hardest single metal on earth, and fabulously heat-resistant. So far no complete jet engine made of titanium carbide has been built. But experimental turbine blades and engine valves have survived tests at temperatures well over 2,000 degrees Fahrenheit.

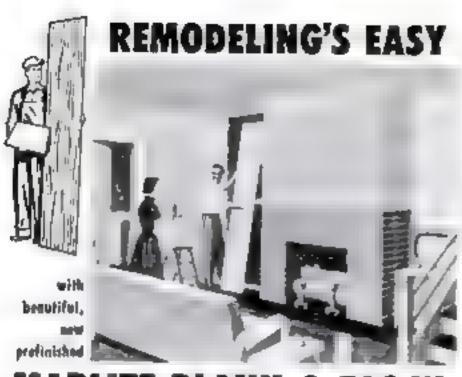

Archaeologists name the stages of advancing civilization for the tool material which made each possible—the Stone Age, the Bronze Age, the Iron Age, It is not farfetched to say that mankind has entered the Carbide Age. We have reached a new milestone on the road to abundance, thanks to man's close approximation of the long-sought Excalibur: the tool that never dulls.

A Point of View

"How far is it to the next filling station" asked the motorist at the farm house.

"Five miles as the crow flies," replied the farmer.

"But how far is it if the crow has to walk and carry a can of gasoline?"—The Wyatt Way.

MARLITE PLANK & BLOCK

Put them on the wall—that's all Planks (16" x 2") and Blacks (16" square) go up fast over old or new walls with ordinary corponter tools. No adhesive needed. extra-large windows for sight-seeing. Although the company has a roster of 17 steam locomotives, seven do most of the heavy work on the mountain. The 70-class steamers, with their brick arches and front-end throttles, are the most rehable power when snow piles on the kılling grade.

Yukon Population Is Doubled

The population of the vast Yukon today numbers only 10,000 people, but this is twice what it was before World War II. White Pass freight now amounts to 90,000 tons a year, a huge increase over prewar activity. Most of the railroad's 400 employees live in Whitehorse. which today, with a population of 3,600, is more than five times as big a town as it was in 1942. Here cargo is transferred from the diminutive boxcars to riverboats and to trucks which operate over a petwork of wilderness roads spawned by the Alaska Highway.

Fabulous Freight for the WP & Y

Although the Yukon Territory has been associated in the public mind exclusively with gold, it also teems with silver, lead, zinc, tungsten, nickel and possibly uranium. As this mineral treasure trove is developed, there will be only one efficient way to hurry the ores and concentrates down to the sea for 12 months of the year-over the ribbon-like, 36-inch tracks of the White Pass & Yukon.

Meanwhile, residents of this last great frontier wait for the first resonant bray of a diesel's whistle. It will echo into Whitehorse from the tracks that rim the rapids of Miles Canyon, where a curlyheaded boatman named Jack London piloted the rafts and canoes of pioneer gold seekers long ago. END

Safety or Sanity

MOUNTAIN climbers rope themselves together because there's safety in numbers—also it keeps the sane ones from going home.—The Pure Oil News.

"HOW I KEEP MY ENGINE TUNED"

by DEB SNYDER

1952 and 1953 I. M. C. A. Champion

all parts during the

rough five minutes after

starting, But a light tough film of Miracle

Power is always there

preventing dry metal to

metal contact! Yes, I

know Miracle Power

pays off-with extra pep, longer life and less

Miracle Power is made

by The AP Parts Cor-

poration over in Toledo, Ohio. They

make special lubricants

for the Air Force, Navy,

engine rebuilders and

oil consumption.

Racing is my business. That's why I'm plenty fussy about my car ... spend hours tuning it. How do I keep it tuned? Easy! I depend on Miracle Power, and believe me, it works so well that I've won the last two LM.C.A. Championships, taking 58 races out of 67.

I use it in my passenger car, too-in both gas and oil. Here's why: Miracle Power stops hydraulic valve lifter noises . . . frees sticking valves . . . stays on to lubricate even when heat breaks oil down and gives a better compression seal. And Miracle Power prevents Dry Starting damage, biggest cause of engine wear. Oil can't reach

(A bland of super lubricents, including collaidel syntholic graphite in suspension. Treets the segles set the oil.)

others. Miracle Power is sold with a money back guarantee through leading car dealers, garages and gas stations. In fact, Ford, Kaiser, and Willys approve Miracle Power for sale through their dealers.

But don't take my word. Write The AP Parts Corp. Dept. 811, Toledo for the report of an independent laboratory which road tested Miracle Power for over 33,000 rugged miles—or better yet try it yourself, today. P AP Ports Corp., 1954

LEJAY CO., 223 Lejay Bidg., Minneapolis, Minnesote

IN PAN-AMERICAN ROAD RACE, "toughest 2.000 miles in the world," thirty leading contenders selected Life-time for their cars, had no trouble, although other cars dropped out due to battery failure. Small stock car winner C. D. Evana said: "most rugged battery I've ever seen."

science and chiese cake were combined in another test, where Life-time battery was run down completely, then lowered into tank of water and frozen solid. Six weeks later, still in cake of ice, battery was connected to beavy truck motor, started it immediately.

The Battery That Wouldn't Give Up

Run down, baked, frozen, it keeps bouncing back to life. Six-year bonded* guarantee rocks billion dollar industry.

Herelded as the "bettery with 753 lives" a new American battery has defied the determined efforts of automotive editors and researchers to make it give up.

from down, charged, run down and charged from 604 to 1142 times in S.A.E. tests, it keeps coming back for more.

In one test, the Life-time battery beat (by a narrow 24% margin) a famous German battery rumored to be postwar "super battery."

Over \$8,000 foot-pounds of power—enough to lift an automobile 15 feet straight up—is developed by the Life-time battery. Tremendous power reserve accounts for battery's performance from 35 below to 160 in the shade.

For cors and trucks, the Life-time battery sells in all 6-volt sizes for \$29.95, in 12-volt sizes for \$34.95. Special sizes are made for marine and industrial use.

For name of nearest dooler or distributor, write Continental Manufacturing Corporation, Dept. PS-3, Washington Blvd. at Motor Ave., Culver City, Calif.

Six-year guarantee backed by multi-million-dollar bonding company.

WANTED: Life-time Battery Distributers, Dealers, Regional Managers

Frankly, we have a problem. Every day, letters and wires pour in asking for the name of the nearest Life-time buttery dealer—so many, in fact, that we need more dealers to handle the demand. These new customers have seen our full-page advertisements in Look, True, Argosy, Esquire and about thirty other magazines. Or they have seen or heard our television and radio broadcasts of international sporting events like the Pan-American Road Race. Now, the same mail brings requests for Life-time battery dealerships.

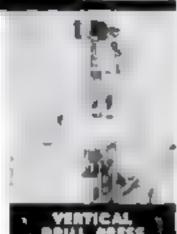

the enswer seems simple: appoint these dealers to take care of our new customers—but it isn't that easy. We need men with executive ability who can qualify as regional managers to help us decide which dealers should be appointed in the fastest-growing organization of its kind in the world. We also need distributors to handle warehousing and administration for our dealer network. If you have organizational ability and are financially responsible, we'd like to hear from you and discuss your opportunities with us.

Continental Manufacturing Corporation, Dept. PS-3, Washington Boulevard at Mater Avenue, Culver City, California

How Much Did You Learn?

By Sanford E. Taylor and Helen Frackenpohl

Washington Square Reading Center, New York

Now you can sample how much you remember of the useful and interesting information packed into this issue of Popular Science Monthly. Answers to the questions are printed just below the quiz. After each answer is a page reference to the article on which the question was based.

- 1. C. P. Hornung, the auto artist, has painted models that go back as far
 - a. 1877
 - Ь. 1895
 - c. 1902
- 2. This man is

- a. testing tobacco for tar
- b. demonstrating a new oil filter
- c. lighting a cigarette
- 3. Air layering is a new method for
 - a. growing plants without soil
 - b, testing metals
 - c. rooting plants
- 4. Care in the Kaiser Hospital is not as expensive as it might be, because
 - a. mass-production techniques are used
 - b. patients help take care of themselves
 - e, convalescence is accelerated

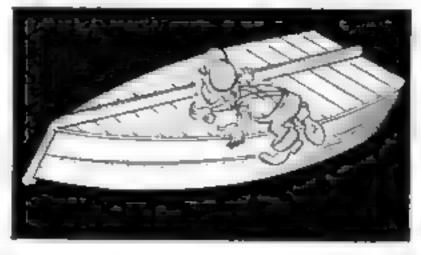

- 5. The best-looking finish for walls paneled in fine woods is
 - a. none at all
 - b. water-clear lacquer
 - c. flat varnish
- According to atomic scientists, the atomic pool envisioned by Pres. Eisenhower is most likely to consist of
 - a, surplus fissionable materials
 - b. uranium and thorium ore
 - c, an exchange of stomic information
- 7. Diesels for the White Pass & Yukon R.R. are specially made because of
 - a, unbelievably steep grades
 - b. harsh weather
 - c, the roadbed's hairpin twists and turns
- 8. The new solar furnace has uncovered two substances with melting points
 - a. between 6,000 and 7,000 degrees
 - b. between 7,000 and 8,000 degrees
 - c. between 8,000 and 9,000 degrees
- 9. The Eaton magnetic clutch employs as its magnetized agent
 - a. fine icon particles in oil
 - b. fine copper particles in oil
 - c. a dry mix of Iron and other particles
- With precast roadbeds and new car trucks, commuter trains could go up to
 - a. 75 miles per bour

A Boat You Can Build

Anyone can build it, says the man who turned out the original and wrote the article about a small boat you'll see in the April issue of POPULAR SCIENCE MONTHLY. The lack of framing is the secret of its simplicity. It's a boat that will let you join in the fun of the crowd affoat this summer—with either oars or outboard.

A REAL SHOP VALUE

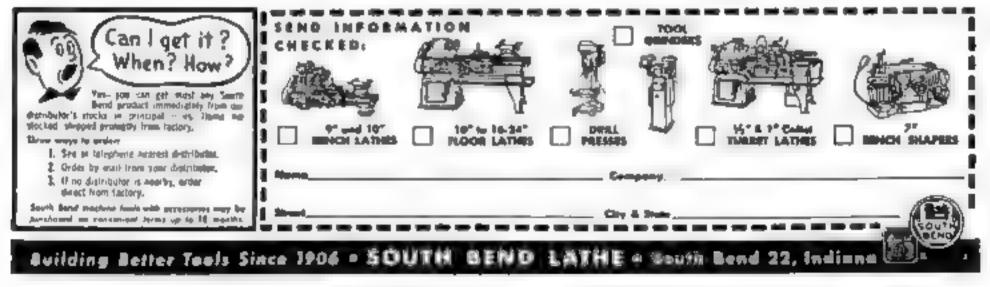

Lathe values aren't measured in dollars. They are gauged by accuracy, versatility and dependable service. That's what makes South Bend 9" Lathes such remarkable values -- they give you more of what you actually need.

They are built to the same high standards and with the same skilled workmanship as larger South Bend Lathes. This makes them capable of precision work of all kinds in the small shop or close-tolerance production of small parts in the large manufacturing plant. Their versatility covers the entire range of lathe operations and is supplemented by numerous attachments available for special classes of work.

Compare these lathes with all others, regardless of price, and you'll see why you get more for your money in a South Bend.

Every lethe operator needs this popular reference handbook on lathe operation and care. 126 pages of heipful information 365 illustrations. Send 50¢ for your copy

They Like Ike's Atomic Ideas

When President Eisenhower dramatically proposed (right) to the United Nations that an international bank of fissionable materials be created for peaceful uses, Populan Science Monthly promptly rounded up some nurlear scientists and asked them what they thought of the idea. Their inspiring reactions, transcribed from magnetic tape, are reported in the article, "If Atomic Fuel Were Shared," beginning on page 101,

MAGNIFICENT TRUE-TO-LIFE COLOR PRINTS into your home! AND INFORMATIVE ALBUMS THAT ARE AS EXCITING AS A VISIT TO A GREAT MUSEUM!

What will these unusual creatures grow up to be? You'd never guess?

if you enroll now

THE CURRENT ALBUM

CAMOUFLAGE IN NA

IGHT NOW is an excellent time for you to find out About the National Audubon Society's revolutionary "Museum-at-Home" Nature Program. If you mail the post card at right you may have ABSOLUTE-LY FREE OF CHARGE the current set entitled CAMOUFLAGE IN NATURE, including thirty fascinating natural color prints plus an informative album in which to mount them. (Value \$1,00)

This generous FREE gift is being offered to you as a demonstration-so that you and your family can discover how much pleasure and knowledge can be derived from this new and unique plen.

A Much-Needed Program

There is no subject more satisfying and worthwhile for young and old than the study of Nature. And the best way to undertake this fascinating quest would be in the personal company of friendly and inspired naturalists, such as those on the Staff of the National Audubon Society.

These scientists would show you the migrations of sea birds over thousands of miles of open water . . . let you discover how cleverly Nature "protects her own" with camouflage . . . explain to you the strange and almost unbelievable ways in which some animals reproduce, and rear their young. Best of all, these naturalists would open your eyes to the wonders you can discover in your own back yard or park!

An Amazing "Museum-at-Home"

The "Museum-at-Home" Nature Program was developed to bring to your home the closest possible equivalent to this kind of thrilling personal guidance. Each month a fascinating new topic is selected, and you and How many butterflies here? MUSEUM-AT-HOME

your family explore it together with the National Audubon Society's experts. For each topic, a collection of about thirty natural color prints—usually brilliant true color photographs—is issued, together with an album in which the prints (already gummed for this purpose) may be mounted. An interesting fact-filled text forms an important part of each set. It explains your "Museumat-Home" exhibits, and gives you a wealth of other information. And the total cost is very low; only \$1 for each set, plus a few pennies for shipping.

In addition, along with your first album you will be given a handsome maroon and gold color protective case in which your Nature Program sets may be kept. In almost no time your albums and color prints will rapidly grow into an "armchair museum" of Natural History! And this "museum" will be visited again and again through the years by the whole family and by friends. Begin your enrollment now with a Free Gift. Send the

postage-free card-without money-today.
